Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
ASS Field Screening Analysis	* EA037	SOIL	In house: Referenced to Acid Sulfate Soils Laboratory Methods Guidelines, version 2.1 June 2004. As received samples are tested for pH field and pH fox and assessed for a reaction rating.
Moisture Content	EA055-103	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 103-105 degrees C. This method is compliant with NEPM (2013) Schedule B(3) Section 7.1 and Table 1 (14 day holding time).
Total Metals by ICP-AES	EG005T	SOIL	In house: Referenced to APHA 3120; USEPA SW 846 - 6010. Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM (2013) Schedule B(3)
Total Metals by ICP-MS - Suite R	EG020R-T	SOIL	In house: Referenced to APHA 3125; USEPA SW846 - 6020. Metals in solids are determined following an appropriate acid digestion. The ICPMS technique ionizes selected elements. Ions are passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass / charge ratios prior to measurement by a discrete dynode ion detector. This method is compliant with NEPM (2013) Schedule B(3)
Total Mercury by FIMS	EG035T	SOIL	In house: Referenced to AS 3550, APHA 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM (2013) Schedule B(3)
Pesticides by GCMS	EP068	SOIL	In house: Referenced to USEPA SW 846 - 8270D Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM (2013) Schedule B(3) (Method 504,505)
TRH - Semivolatile Fraction (Silica Gel Clean Up)	EP071SG-S	SOIL	In house: Referenced to USEPA SW 846 - 8015A Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40.
PAH/Phenols (SIM)	EP075(SIM)	SOIL	In house: Referenced to USEPA SW 846 - 8270D Extracts are analysed by Capillary GC/MS in Selective Ion Mode (SIM) and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (2013) Schedule B(3) (Method 502 and 507)
TRH Volatiles/BTEX	EP080	SOIL	In house: Referenced to USEPA SW 846 - 8260B Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-House. A portion of soil is extracted with MTBE. The extract is taken to dryness, made up in mobile phase. Analysis is by LC/MSMS, ESI Negative Mode using MRM. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers.

Preparation Methods	Method	Matrix	Method Descriptions
Drying only	EN020D	SOIL	In house
Hot Block Digest for metals in soils sediments and sludges	EN69	SOIL	In house: Referenced to USEPA 200.2. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM (2013) Schedule B(3) (Method 202)

Preparation Methods	Method	Matrix	Method Descriptions
Sample Extraction for PFAS	EP231-PR	SOIL	In house
Methanolic Extraction of Soils for Purge and Trap	ORG16	SOIL	In house: Referenced to USEPA SW 846 - 5030A. 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS.
Tumbler Extraction of Solids	ORG17	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.

Receipt Detail	: MEDIUM ESKIES	No. of samples received / analysed	: 90 / 85

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **As only a soil jar suitable for PFAS testing was received for "AM-BH30 2.75-3" (ALS #78), pH Field and Fox (EA037) will not be tested on this sample.**
- **Samples "QAQC006" and "QAQC002" will be forwarded to Eurofins, as requested.**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- **PFAS analysis will be conducted by ALS Environmental, Sydney, NATA accreditation no. 825, Site No. 10911 (Micro site no. 14913). The estimated due date for this data is the 25/10/16.**
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (14 days), Solid (60 days) from date of completion of work order.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Please be advised that a soil jar for PFAS testing was not received for "AM-BH14 1-1.25" (ALS #17), however one was received for "AM-BH14 0.75-1" (ALS #16). PFAS testing has been assigned to ALS #16, however if testing for this is not required on this sample, please contact ALS Client Services at ALSEnviro.Brisbane@alsglobal.com , ASAP.**
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default to 15:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory for processing purposes and will be shown bracketed without a time component.

ilac-MRA NATA
Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Andrew Epps	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
Ben Felgendrejeris		Brisbane Acid Sulphate Soils, Stafford, QLD
Lana Nguyen	Senior LCMS Chemist	Sydney Organics, Smithfield, NSW
Matt Frost	Senior Organic Chemist	Brisbane Inorganics, Stafford, QLD
Matt Frost	Senior Organic Chemist	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EG005T (Total Metals): Sample EB1624685-033 shows poor matrix spike recovery due to sample heterogeneity. Confirmed by visual inspection.
- EG035T (Total Mercury): Sample EB1624685-033 shows poor spike recovery due to sample heterogeneity. Confirmed by visual inspection
- EP068 Pesticides: Sample 'AM-BH14 0.25-0.5' shows poor matrix spike recovery for 4,4/ due to matrix interference. Confirmed by re-extraction and re-analysis.
- EP068 Pesticides: High LCS recovery deemed acceptable as all associated analyte results are less than LOR.
- EP075(SIM): High LCS recovery deemed acceptable as all associated analyte results are less than LOR.
- ASS: EA037 (Rapid Field and F(ox) screening): pH F(ox) Reaction Rate: 1 - Slight; 2 - Moderate; 3 - Strong; 4 - Extreme
- EA037 ASS Field Screening: NATA accreditation does not cover performance of this service.
- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.

QUALITY CONTROL REPORT

Work Order	: **EB1624749**	Page	: 1 of 19
Client	: **GOLDER ASSOCIATES**	Laboratory	: Environmental Division Brisbane
Contact	: MS KRYSTLE-RAE BIRAM	Contact	: Carsten Emrich
Address	: P O BOX 1734 MILTON QLD, AUSTRALIA 4064	Address	: 2 Byth Street Stafford QLD Australia 4053
Telephone	: +61 07 3721 5400	Telephone	: +61 7 3243 7222
Project	: 1538021	Date Samples Received	: 14-Oct-2016
Order number	: 1538021	Date Analysis Commenced	: 18-Oct-2016
C-O-C number	: ----	Issue Date	: 25-Oct-2016
Sampler	: MORGAN MIDGLEY		
Site	: Brisbane Airport		
Quote number	: ----		
No. of samples received	: 90		
No. of samples analysed	: 85		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Andrew Epps	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
Ben Felgendrejeris		Brisbane Acid Sulphate Soils, Stafford, QLD
Lana Nguyen	Senior LCMS Chemist	Sydney Organics, Smithfield, NSW
Matt Frost	Senior Organic Chemist	Brisbane Inorganics, Stafford, QLD
Matt Frost	Senior Organic Chemist	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Spike (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EB1624749**	Page	: 1 of 13
Client	: **GOLDER ASSOCIATES**	Laboratory	: Environmental Division Brisbane
Contact	: MS KRYSTLE-RAE BIRAM	Telephone	: +61 7 3243 7222
Project	: 1538021	Date Samples Received	: 14-Oct-2016
Site	: Brisbane Airport	Issue Date	: 25-Oct-2016
Sampler	: MORGAN MIDGLEY	No. of samples received	: 90
Order number	: 1538021	No. of samples analysed	: 85

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **Laboratory Control outliers exist - please see following pages for full details.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Laboratory Control Spike (LCS) Recoveries							
EP068A: Organochlorine Pesticides (OC)	QC-620755-002	----	**Hexachlorobenzene (HCB)**	118-74-1	114 %	54-112%	**Recovery greater than upper control limit**
EP068B: Organophosphorus Pesticides (OP)	QC-620755-002	----	**Pirimphos-ethyl**	23505-41-1	131 %	70-130%	**Recovery greater than upper control limit**

EG005T: Total Metals by ICP-AES	EB1624685--033	Anonymous	**Chromium**	7440-47-3	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**
EG005T: Total Metals by ICP-AES	EB1624685--033	Anonymous	**Copper**	7440-50-8	9.19 %	70-130%	**Recovery less than lower data quality objective**
EG005T: Total Metals by ICP-AES	EB1624685--033	Anonymous	**Zinc**	7440-66-6	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**
EG035T: Total Recoverable Mercury by FIMS	EB1624685--033	Anonymous	**Mercury**	7439-97-6	139 %	70-130%	**Recovery greater than upper data quality objective**
EP068A: Organochlorine Pesticides (OC)	EB1624749--014	AM-BH14 0.25-0.5	**4.4`-DDT**	50-29-3	57.7 %	70-130%	**Recovery less than lower data quality objective**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
ASS Field Screening Analysis	* EA037	SOIL	In house: Referenced to Acid Sulfate Soils Laboratory Methods Guidelines, version 2.1 June 2004. As received samples are tested for pH field and pH fox and assessed for a reaction rating.
Moisture Content	EA055-103	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 103-105 degrees C. This method is compliant with NEPM (2013) Schedule B(3) Section 7.1 and Table 1 (14 day holding time).
Total Metals by ICP-AES	EG005T	SOIL	In house: Referenced to APHA 3120; USEPA SW 846 - 6010. Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM (2013) Schedule B(3)
Total Metals by ICP-MS - Suite R	EG020R-T	SOIL	In house: Referenced to APHA 3125; USEPA SW846 - 6020. Metals in solids are determined following an appropriate acid digestion. The ICPMS technique ionizes selected elements. Ions are passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass / charge ratios prior to measurement by a discrete dynode ion detector. This method is compliant with NEPM (2013) Schedule B(3)
Total Mercury by FIMS	EG035T	SOIL	In house: Referenced to AS 3550, APHA 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM (2013) Schedule B(3)
Pesticides by GCMS	EP068	SOIL	In house: Referenced to USEPA SW 846 - 8270D Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM (2013) Schedule B(3) (Method 504,505)
TRH - Semivolatile Fraction	EP071	SOIL	In house: Referenced to USEPA SW 846 - 8015A Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40.
TRH - Semivolatile Fraction (Silica Gel Clean Up)	EP071SG-S	SOIL	In house: Referenced to USEPA SW 846 - 8015A Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40.
PAH/Phenols (SIM)	EP075(SIM)	SOIL	In house: Referenced to USEPA SW 846 - 8270D Extracts are analysed by Capillary GC/MS in Selective Ion Mode (SIM) and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (2013) Schedule B(3) (Method 502 and 507)
TRH Volatiles/BTEX	EP080	SOIL	In house: Referenced to USEPA SW 846 - 8260B Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-House. A portion of soil is extracted with MTBE. The extract is taken to dryness, made up in mobile phase. Analysis is by LC/MSMS, ESI Negative Mode using MRM. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers.

Preparation Methods	Method	Matrix	Method Descriptions
Drying only	EN020D	SOIL	In house

Preparation Methods	Method	Matrix	Method Descriptions
Hot Block Digest for metals in soils sediments and sludges	EN69	SOIL	In house: Referenced to USEPA 200.2. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM (2013) Schedule B(3) (Method 202)
Sample Extraction for PFAS	EP231-PR	SOIL	In house
Methanolic Extraction of Soils for Purge and Trap	ORG16	SOIL	In house: Referenced to USEPA SW 846 - 5030A. 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS.
Tumbler Extraction of Solids	ORG17	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Ben Felgendrejeris		Brisbane Acid Sulphate Soils, Stafford, QLD

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- **The samples in this work order have been re-batched from EB1624693.**
- ASS: EA033 (CRS Suite): Liming rate is calculated and reported on a dry weight basis assuming use of fine agricultural lime (CaCO3) and using a safety factor of 1.5 to allow for non-homogeneous mixing and poor reactivity of lime. For conversion of Liming Rate from 'kg/t dry weight' to 'kg/m3 in-situ soil', multiply 'reported results' x 'wet bulk density of soil in t/m3'.

Project	: 1538021	Date Samples Received	: 28-Oct-2016
Order number	: 1538021	Date Analysis Commenced	: 03-Nov-2016
C-O-C number	: ----	Issue Date	: 03-Nov-2016
Sampler	: MORGAN MIDGLEY		
Site	: Brisbane Airport		
Quote number	: ----		
No. of samples received	: 18		
No. of samples analysed	: 18		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Ben Felgendrejeris		Brisbane Acid Sulphate Soils, Stafford, QLD

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Spike (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

				Method Blank (MB) Report	Laboratory Control Spike (LCS) Report

EA033: HCl Extractable Sulfur (20Be)	----	0.02	% S	<0.02	0.026 % S	109	70	130

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

- **No Matrix Spike (MS) or Matrix Spike Duplicate (MSD) Results are required to be reported.**

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EB1625883**	Page	: 1 of 5
Client	: **GOLDER ASSOCIATES**	Laboratory	: Environmental Division Brisbane
Contact	: MS KRYSTLE-RAE BIRAM	Telephone	: +61 7 3243 7222
Project	: 1538021	Date Samples Received	: 28-Oct-2016
Site	: Brisbane Airport	Issue Date	: 03-Nov-2016
Sampler	: MORGAN MIDGLEY	No. of samples received	: 18
Order number	: 1538021	No. of samples analysed	: 18

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Chromium Suite for Acid Sulphate Soils	EA033	SOIL	In house: Referenced to Ahern et al 2004. This method covers the determination of Chromium Reducible Sulfur (SCR); pHKCl; titratable actual acidity (TAA); acid neutralising capacity by back titration (ANC); and net acid soluble sulfur (SNAS) which incorporates peroxide sulfur. It applies to soils and sediments (including sands) derived from coastal regions. Liming Rate is based on results for samples as submitted and incorporates a minimum safety factor of 1.5.

Preparation Methods	Method	Matrix	Method Descriptions
Drying at 85 degrees, bagging and labelling (ASS)	EN020PR	SOIL	In house

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **The samples in this work order have been re-batched from EB1624749.**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (14 days), Solid (60 days) from date of completion of work order.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default to 15:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory for processing purposes and will be shown bracketed without a time component.

Matrix: **SOIL**

Project	: 1538021	Date Samples Received	: 28-Oct-2016 15:00
Order number	: 1538021	Date Analysis Commenced	: 02-Nov-2016
C-O-C number	: ----	Issue Date	: 02-Nov-2016 16:46
Sampler	: MORGAN MIDGLEY		
Site	: Brisbane Airport		
Quote number	: ----		
No. of samples received	: 21		
No. of samples analysed	: 21		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Ben Felgendrejeris		Brisbane Acid Sulphate Soils, Stafford, QLD

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- **The samples in this work order have been re-batched from EB1624749.**
- Amendment (02/11/2016): This report has been amended and re-released to allow adjustment of the LCS amount added value for TAA. New LCS was used with old LCS amount added value, causing Standard to appear to fail. All analysis results are as per the previous report.
- ASS: EA033 (CRS Suite): Liming rate is calculated and reported on a dry weight basis assuming use of fine agricultural lime (CaCO3) and using a safety factor of 1.5 to allow for non-homogeneous mixing and poor reactivity of lime. For conversion of Liming Rate from 'kg/t dry weight' to 'kg/m3 in-situ soil', multiply 'reported results' x 'wet bulk density of soil in t/m3'.

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Spike (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

- **No Matrix Spike (MS) or Matrix Spike Duplicate (MSD) Results are required to be reported.**

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EB1625888**	Page	: 1 of 6
Amendment	: **1**		
Client	: **GOLDER ASSOCIATES**	Laboratory	: Environmental Division Brisbane
Contact	: MS KRYSTLE-RAE BIRAM	Telephone	: +61 7 3243 7222
Project	: 1538021	Date Samples Received	: 28-Oct-2016
Site	: Brisbane Airport	Issue Date	: 02-Nov-2016
Sampler	: MORGAN MIDGLEY	No. of samples received	: 21
Order number	: 1538021	No. of samples analysed	: 21

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Chromium Suite for Acid Sulphate Soils	EA033	SOIL	In house: Referenced to Ahern et al 2004. This method covers the determination of Chromium Reducible Sulfur (SCR); pHKCl; titratable actual acidity (TAA); acid neutralising capacity by back titration (ANC); and net acid soluble sulfur (SNAS) which incorporates peroxide sulfur. It applies to soils and sediments (including sands) derived from coastal regions. Liming Rate is based on results for samples as submitted and incorporates a minimum safety factor of 1.5.

Preparation Methods	Method	Matrix	Method Descriptions
Drying at 85 degrees, bagging and labelling (ASS)	EN020PR	SOIL	In house

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- **PFAS analysis will be conducted by ALS Environmental, Sydney, NATA accreditation no. 825, Site No. 10911 (Micro site no. 14913).**
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (14 days), Solid (60 days) from date of completion of work order.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

Method *Client sample ID*	Sample Container Received	Preferred Sample Container for Analysis
Dissolved Mercury by FIMS : EG035F		
QAQC300	- Clear Plastic Bottle - Natural	- Clear Plastic Bottle - Nitric Acid; Filtered
Dissolved Metals by ICP-MS - Suite A : EG020A-F		
QAQC300	- Clear Plastic Bottle - Natural	- Clear Plastic Bottle - Nitric Acid; Filtered

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default to 15:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory for processing purposes and will be shown bracketed without a time component.

Alex Rossi	Organic Chemist	Sydney Organics, Smithfield, NSW
Greg Vogel	Laboratory Manager	Brisbane Inorganics, Stafford, QLD
Kim McCabe	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **WATER**

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Spike (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **WATER**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **WATER**

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EB1625464**	Page	: 1 of 8
Client	: **GOLDER ASSOCIATES**	Laboratory	: Environmental Division Brisbane
Contact	: K BIRAM	Telephone	: +61 7 3243 7222
Project	: 1538021	Date Samples Received	: 25-Oct-2016
Site	: Brisbane Airport	Issue Date	: 01-Nov-2016
Sampler	: MORGAN MIDGLEY	No. of samples received	: 12
Order number	: 1538021	No. of samples analysed	: 12

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **Analysis Holding Time Outliers exist - please see following pages for full details.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Outliers : Quality Control Samples

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **WATER**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
pH by PC Titrator	EA005-P	WATER	In house: Referenced to APHA 4500 H+ B. This procedure determines pH of water samples by automated ISE. This method is compliant with NEPM (2013) Schedule B(3)
Conductivity by PC Titrator	EA010-P	WATER	In house: Referenced to APHA 2510 B. This procedure determines conductivity by automated ISE. This method is compliant with NEPM (2013) Schedule B(3)
Alkalinity by PC Titrator	ED037-P	WATER	In house: Referenced to APHA 2320 B This procedure determines alkalinity by automated measurement (e.g. PC Titrate) using pH 4.5 for indicating the total alkalinity end-point. This method is compliant with NEPM (2013) Schedule B(3)
Acidity as Calcium Carbonate	ED038	WATER	In house: Referenced to APHA 2310 B Acidity is determined by titration with a standardised alkali to an end-point pH of 8.3. This method is compliant with NEPM (2013) Schedule B(3)
Sulfate (Turbidimetric) as SO4 2- by Discrete Analyser	ED041G	WATER	In house: Referenced to APHA 4500-SO4. Dissolved sulfate is determined in a 0.45um filtered sample. Sulfate ions are converted to a barium sulfate suspension in an acetic acid medium with barium chloride. Light absorbance of the BaSO4 suspension is measured by a photometer and the SO4-2 concentration is determined by comparison of the reading with a standard curve. This method is compliant with NEPM (2013) Schedule B(3)
Chloride by Discrete Analyser	ED045G	WATER	In house: Referenced to APHA 4500 Cl - G.The thiocyanate ion is liberated from mercuric thiocyanate through sequestration of mercury by the chloride ion to form non-ionised mercuric chloride.in the presence of ferric ions the librated thiocynate forms highly-coloured ferric thiocynate which is measured at 480 nm APHA 21st edition seal method 2 017-1-L april 2003
Major Cations - Dissolved	ED093F	WATER	In house: Referenced to APHA 3120 and 3125; USEPA SW 846 - 6010 and 6020; Cations are determined by either ICP-AES or ICP-MS techniques. This method is compliant with NEPM (2013) Schedule B(3) Sodium Adsorption Ratio is calculated from Ca, Mg and Na which determined by ALS in house method QWI-EN/ED093F. This method is compliant with NEPM (2013) Schedule B(3) Hardness parameters are calculated based on APHA 2340 B. This method is compliant with NEPM (2013) Schedule B(3)
Dissolved Metals by ICP-MS - Suite A	EG020A-F	WATER	In house: Referenced to APHA 3125; USEPA SW846 - 6020, ALS QWI-EN/EG020. Samples are 0.45µm filtered prior to analysis. The ICPMS technique utilizes a highly efficient argon plasma to ionize selected elements. Ions are then passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to their measurement by a discrete dynode ion detector.
Dissolved Mercury by FIMS	EG035F	WATER	In house: Referenced to AS 3550, APHA 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) Samples are 0.45µm filtered prior to analysis. FIM-AAS is an automated flameless atomic absorption technique. A bromate/bromide reagent is used to oxidise any organic mercury compounds in the filtered sample. The ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM (2013) Schedule B(3)
Ionic Balance by PCT DA and Turbi SO4 DA	EN055 - PG	WATER	In house: Referenced to APHA 1030F. This method is compliant with NEPM (2013) Schedule B(3)

Analytical Methods	Method	Matrix	Method Descriptions
Per- and Polyfluoroalkyl Substances (PFAS by LCMSMS	EP231X-LL	WATER	In-house: Analysis of fresh and saline waters by solid phase extraction followed by and LC-Electrospray-MS-MS, Negative Mode using MRM. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers.

Preparation Methods	Method	Matrix	Method Descriptions
SPE preparation for LL and saline PFCs	EP231-SPE	WATER	In house

CERTIFICATE OF ANALYSIS

Work Order	: **EB1625464**	Page	: 1 of 12
Client	: **GOLDER ASSOCIATES**	Laboratory	: Environmental Division Brisbane
Contact	: K BIRAM	Contact	: Carsten Emrich
Address	: P O BOX 1734 MILTON QLD, AUSTRALIA 4064	Address	: 2 Byth Street Stafford QLD Australia 4053
Telephone	: +61 07 3721 5400	Telephone	: +61 7 3243 7222
Project	: 1538021	Date Samples Received	: 25-Oct-2016 15:15
Order number	: 1538021	Date Analysis Commenced	: 27-Oct-2016
C-O-C number	: ----	Issue Date	: 01-Nov-2016 22:12
Sampler	: MORGAN MIDGLEY		
Site	: Brisbane Airport		
Quote number	: ----		
No. of samples received	: 12		
No. of samples analysed	: 12		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Alex Rossi	Organic Chemist	Sydney Organics, Smithfield, NSW
Greg Vogel	Laboratory Manager	Brisbane Inorganics, Stafford, QLD
Kim McCabe	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EG020-F (Dissolved Metals): LOR's have been raised for some samples due to matrix interference.

Important Information Relating to This Report

IMPORTANT INFORMATION RELATING TO THIS REPORT

The document ("Report") to which this page is attached and which this page forms a part of, has been issued by Golder Associates Pty Ltd ("Golder") subject to the important limitations and other qualifications set out below.

This Report constitutes or is part of services ("Services") provided by Golder to its client ("Client") under and subject to a contract between Golder and its Client ("Contract"). The contents of this page are not intended to and do not alter Golder's obligations (including any limits on those obligations) to its Client under the Contract.

This Report is provided for use solely by Golder's Client and persons acting on the Client's behalf, such as its professional advisers. Golder is responsible only to its Client for this Report. Golder has no responsibility to any other person who relies or makes decisions based upon this Report or who makes any other use of this Report. Golder accepts no responsibility for any loss or damage suffered by any person other than its Client as a result of any reliance upon any part of this Report, decisions made based upon this Report or any other use of it.

This Report has been prepared in the context of the circumstances and purposes referred to in, or derived from, the Contract and Golder accepts no responsibility for use of the Report, in whole or in part, in any other context or circumstance or for any other purpose.

The scope of Golder's Services and the period of time they relate to are determined by the Contract and are subject to restrictions and limitations set out in the Contract. If a service or other work is not expressly referred to in this Report, do not assume that it has been provided or performed. If a matter is not addressed in this Report, do not assume that any determination has been made by Golder in regards to it.

At any location relevant to the Services conditions may exist which were not detected by Golder, in particular due to the specific scope of the investigation Golder has been engaged to undertake. Conditions can only be verified at the exact location of any tests undertaken. Variations in conditions may occur between tested locations and there may be conditions which have not been revealed by the investigation and which have not therefore been taken into account in this Report.

Golder accepts no responsibility for and makes no representation as to the accuracy or completeness of the information provided to it by or on behalf of the Client or sourced from any third party. Golder has assumed that such information is correct unless otherwise stated and no responsibility is accepted by Golder for incomplete or inaccurate data supplied by its Client or any other person for whom Golder is not responsible. Golder has not taken account of matters that may have existed when the Report was prepared but which were only later disclosed to Golder.

Having regard to the matters referred to in the previous paragraphs on this page in particular, carrying out the Services has allowed Golder to form no more than an opinion as to the actual conditions at any relevant location. That opinion is necessarily constrained by the extent of the information collected by Golder or otherwise made available to Golder. Further, the passage of time may affect the accuracy, applicability or usefulness of the opinions, assessments or other information in this Report. This Report is based upon the information and other circumstances that existed and were known to Golder when the Services were performed and this Report was prepared. Golder has not considered the effect of any possible future developments including physical changes to any relevant location or changes to any laws or regulations relevant to such location.

Where permitted by the Contract, Golder may have retained subconsultants affiliated with Golder to provide some or all of the Services. However, it is Golder which remains solely responsible for the Services and there is no legal recourse against any of Golder's affiliated companies or the employees, officers or directors of any of them.

By date, or revision, the Report supersedes any prior report or other document issued by Golder dealing with any matter that is addressed in the Report.

Any uncertainty as to the extent to which this Report can be used or relied upon in any respect should be referred to Golder for clarification.

As a global, employee-owned organisation with over 50 years of experience, Golder Associates is driven by our purpose to engineer earth's development while preserving earth's integrity. We deliver solutions that help our clients achieve their sustainable development goals by providing a wide range of independent consulting, design and construction services in our specialist areas of earth, environment and energy.

APPENDICES

1.0 INTRODUCTION

Brisbane Airport Corporation Pty Ltd (BAC) commissioned Golder Associates Pty Ltd (Golder) to undertake a contamination assessment for Stage 1 of the Auto Mall Precinct project at the Brisbane Airport (see Figure 1). Golder has previously conducted a desktop study contamination and Acid Sulfate Soil (ASS) review of the Auto Mall Precinct for BAC (reference 1460490-002-R-Rev0, February 2015). The purpose of the contamination assessment is to inform the detailed design of the proposed development.

Combined contamination, acid sulfate soil and geotechnical investigations were conducted during December 2015 based on the scope of work defined in our proposal (Golder document reference no. P1538021-002-L-Rev1 dated 12 October 2015). A supplementary investigation was completed in October 2016 from 3 locations, and was prompted by the absence of data in the central portion of Stage 1, due to the dense vegetation that prevented access during the December 2015 investigation.

This report presents the contamination assessment findings for Stage 1 of the Auto Mall Precinct. The assessment results from the geotechnical and acid sulfate soil (ASS) investigations are provided in separate reports.

2.0 PROJECT DETAILS

An Auto Mall Precinct is proposed to be developed on an area between Moreton Drive, Nancy Bird Way and Airport Drive at the Brisbane Airport. Refer attached **Figure 1** for the location plan. The proposed development comprises a test track in the middle of the site, surrounded by development lots for future commercial use. Private roads are located around the perimeter of the site. An Energex substation and easement is present on the site.

At the time of writing, we understand that the site is to be developed in three stages as follows:

- Development Stage 1: Track, roads and selected development lots; lots north of the Energex easement between the track and Moreton Drive, and the Track and Nancy Bird Way.
- Development Stage 2: development lots south of the Energex easement.
- Development Stage 3: development lots north of the Energex easement between the track and Airport Drive.

Drainage channels will run along site perimeter, with invert levels as low as of RL 0.2 m AD in the western portion of the site. Site drainage channels will discharge into nearby surface water drains

The current staging plan is provided in **Appendix A**.

However, for consistency with previous works, we refer to the portion of the site north of the Energex easement as the Stage 1 investigation area, and the portion to the south as the Stage 2 investigation area.

3.0 SITE DESCRIPTION

The site has an average surface RL of about 2.4 m AD[1] and is currently heavily vegetated with casuarina forest and mangroves. The Stage 1 investigation area of the development covers an area of approximately 950 m by 450 m.

Landers Pocket drain is the closet surface water body feature, located at least 100 m west of the project area. Surface water in Landers Pocket drain flows north-east and south-west before discharging into Kedron Brook Floodway Drain. The Kedron Brook Floodway Drain discharges into Kedron Brook. The ultimate receiving environment of surface water is Moreton Bay from Kedron Brook.

[1] Aerodrome Datum

4.0 BACKGROUND INFORMATION

Golder previously conducted a desktop assessment of ASS, groundwater and contamination for the Auto Mall Precinct in 2014. The findings of this desktop assessment were reported in Golder report reference No. 1416490-002-Rev0.

Relevant contamination findings for Stage 1 from the desktop assessment are summarised below:

- Brisbane Airport Corporation (BAC) maintains a Contaminated Sites Register (CSR). CSR listed site 28 (black sands) is located at the southern end of the Auto Mall Precinct within the Stage 2 investigation area, on the boundary with the Stage 1 investigation area. Potential contaminants of concern associated with the black sands include heavy metals, minerals and radioactivity.
- All remaining CSR listed sites were located outside of the Auto Mall Precinct area and were considered to have a low potential to cause impact to the current development site.
- In addition to the CSR, the desktop study completed for the Auto Mall Precinct in 2015 identified a construction yard in the southern portion of Stage 2 investigation area in 2009, likely associated with the works for the construction of Moreton Drive. This potential contamination source includes the possible contaminants of concern of hydrocarbons, heavy metals and organochlorine pesticides.

Per- and poly-fluoroaklyl substance (PFAS) are emerging contaminants of concern at airports and airfields. PFAS (including PFOS and PFOA) are associated with historical use in aqueous film forming foams (AFFF) used for firefighting. PFAS are persistent chemicals with high groundwater mobility. Known PFAS source areas at the Brisbane Airport include the fire rescue training facilities and fire stations, but PFAS have been widely detected in groundwater across the airport. The nearest potential sources of PFAS comprise:

- Satellite Fire Station located about 3.9 km north of the site.
- Fire Rescue Training Area located about 4.8 km north of the site.
- Main Fire Station located about 2.3 km north east of the site.

Since the desktop study was completed, fuel storage facilities were also identified as potential PFAS sources, due to the storage of large volumes of firefighting liquids. The closest fuel facilities to the site include:

- JUHI facility along Hakea Street, located about 780 m north-east of the site
- Former JUHI facility along Lomandra Drive, located about 1.3 km south of the site.

The desktop assessment indicated that no previous groundwater investigations for PFAS have been conducted on the site or surrounding area.

As the use of PFOS and PFOA has been discontinued in AFFF, existing groundwater contamination from these source areas or incidental use elsewhere at the airport is not expected to increase over time.

No known or potential PFAS contaminating activities were identified occurring (presently or in the past) on or in the immediate vicinity of the site. However, PFAS has been widely detected in groundwater across the airport and therefore the need for a Preliminary Investigation (under GEM-02) is considered to be triggered at this site.

Based on the desktop assessment the main contaminants of interest (COI) for the investigation site comprise:

- PFAS, including PFOS and PFOA, in soil and groundwater associated with historical use in AFFF used for firefighting elsewhere at the airport.
- Heavy metals, mineral and radioactivity associated with the CSR site 28 (located within Stage 2 investigation area near the boundary of Stage 1)
- Hydrocarbons, heavy metals and organochlorine pesticides in soil associated with the former constructions yard (located within Stage 2 Investigation area).

5.0 REGULATORY FRAMEWORK

The following key regulatory drivers and guidance documents have been considered and utilised in conducting this assessment:

5.1 General

- Office of Legislative Drafting Attorney-General's Department, *Airports (Environment Protection) Regulations 1997* (AEPR 1997 guidelines).
- *Queensland Water Quality Guidelines* 2009, as amended in 2013 (QWQG 2009), which provides an overarching framework for the management of waters (including groundwater) under the Environmental Protection Act 1994.
- Provisions for the assessment and management of contaminated land under the *Environmental Protection Act 1994*
- ASC *National Environment Protection (Assessment of Site Contamination) Measure 1999* as amended in 2013 (NEPM 2013). The NEPM has been recognised as the primary national guidance document for the assessment of site contamination in Australia.

5.2 Per- and Poly-fluoroalkyl Substances (PFAS)

- Australian Government Department of Infrastructure and Regional Development *Guideline for Environmental Management – PFC Management Actions Advice* (GEM-002), Version June 2015.
- *Managing PFC Contamination at Airports Interim Contamination Management Strategy and Decision Framework*, GHD, June 2015.
- *Model Operating Conditions – ERA 60 – Waste Disposal* Version 1.1, Qld EHP, 30 January 2015.
- Environmental Health Standing Committee (enHealth) of the Australian Health Protection Principal Committee, *enHealth Statement: Interim national guidance on human health reference values for per- and poly-fluoroalkyl substances for use in site investigations in Australia,* June 2016.

6.0 ASSESSMENT CRITERIA

6.1 PFAS

Current Australian guidelines, including AEPR 1997, do not include screening or acceptable levels for PFAS. GEM-002 indicates that until national standards for the management of PFAS contamination are agreed, the framework for PFAS management developed by consultancy firm GHD (2015) - *Managing PFC Contamination at Airports Interim Contamination Management Strategy and Decision Framework* - is available to airports and is intended to facilitate discussion on *PFAS* management at leased federal airports.

The following Interim Screening Levels (from GHD 2015) for PFAS in soil, groundwater and surface water have been adopted as Tier 1 values for the initial assessment of risk.

Table 1: Interim Screening Levels for PFAS

Exposure Scenario	PFOS / PHFxS	PFOA / 8:2FTS	6:2FTS	Comment
Soil				
Human health (direct contact – offsite/soil reuse)	6 mg/kg	16 mg/kg	60 mg/kg	These are residential screening levels that are protective of human health via direct contact (ingestion, dermal and dust inhalation). These levels are conservative for consideration of construction workers and general public in the airport (commercial/industrial) setting.
Human health (direct contact – onsite/construction workers)	90 mg/kg	240 mg/kg	900 mg/kg	These interim screening levels are suitable for commercial/industrial land use settings. They are protective of adult worker and the general public health via direct contact (ingestion, dermal and dust inhalation). These levels do not consider the potential for leaching to groundwater.
Ecological (terrestrial)	0.373 mg/kg	3.73 mg/kg	n/a	Screening level is a low reliability, predicted no effect concentration and should provide 95% protection of terrestrial species.
Groundwater				
Human health (drinking water only)	0.2 µg/L	0.4 µg/L	5.0 µg/L	Based on a drinking water endpoint protective of human health and do not include allowance for other exposures or effects that might arise from use or disposal of water after use.
Ecological	In most cases the assessment of ecological impact will relate to the discharge of groundwater to a nearby surface water body, and impact on the aquatic ecosystem of the surface water. In assessing risk to surface waters, consideration should be given to the flux of the chemical in groundwater and the resulting dilution that will occur in the surface water. This can then be compared to the surface water screening values.			
Surface Water				
Ecological (toxicity effects on aquatic organisms)	6.66 µg/L	2,900 µg/L	n/a	95% species protection
Human Health (consumption of fish)	0.00065 µg/L*	0.3µg/L	0.0065 µg/L	Based on consumption of fish and applies to the receiving water **after** dilution.

*It is noted that this concentration is factor of 3 times lower than the limit of reporting (LOR) available at commercial analytical laboratories in Australia, using Ultratrace® methods. The concentration is also below the reported treatment levels using current technology/methods for saline waters. On this basis, the level of dilution that may be achieved prior to discharge into waterways becomes the critical factor rather than comparison to this interim screening level.

Additionally, the Queensland government has published maximum *PFAS* soil concentrations for use as day cover at landfills *(Model Operating Conditions – ERA 60 – Waste Disposal* Version 1.1, Qld EHP, 30 January 2015). These have been adopted to assess, suitability of PFAS-impacted soil to be disposed of offsite.

Further guidance on acceptable PFAS levels was recently provided in *enHealth Statement: Interim national guidance on human health reference values for per- and poly-fluoroalkyl substances for use in site investigations in Australia,* prepared by the Environmental Health Standing Committee (enHealth) of the Australian Health Protection Principal Committee in June 2016.

The enHealth guidelines were also adopted as Tier 1 values for the initial assessment of risk for drinking water and surface water (recreational) exposure pathways.

Exposure Scenario	PFOS / PFHxS	PFOA	Comment
Groundwater			
Human health (drinking water)	0.5 µg/L	5 µg/L	The interim drinking water guideline values are not intended to be a guide for drinking water utility providers across Australia, but rather for use to confirm the quality of drinking water supplies potentially affected by specific instances of site contamination.
Surface Water			
Human Health (recreational)	5 µg/L	50 µg/L	Ten times the drinking water levels

6.2 Other Parameters

Airports (Environmental Protection) Regulations 1997 (AEPR – 1997) apply for airports in Australia and to all BAC land. The site is not listed as an Area of Environmental Significance at Brisbane Airport, as such results were compared with:

- Soil: Acceptable Limits for general areas (Schedule 3, Table 1 of AEPR).
- Groundwater: Accepted limits for marine Water (Schedule 2, Table 1 of AEPR).

In addition, the following guidelines derived from the *National Environment Protection (Assessment of Site Contamination) Amendment Measure 2013* (No. 1) (NEPM, 2013) Schedule B1 were also referenced as a general environmental screening tool for soil and groundwater:

- Soil: Ecological Screening Levels (ESLs) for commercial/industrial land use (coarse soil) for petroleum hydrocarbon compounds.
- Soil and groundwater: Human health exposure via vapour intrusion from volatile hydrocarbon impacts in soil (Hydrocarbon Screening Levels – HSLs). HSLs have been developed for selected petroleum compounds and fractions and are applicable to assessing human health risk via the inhalation pathway. The HSLs depend on specific soil physicochemical properties, land use scenarios, and the characteristics of building structures. They apply to different soil types, and depths below surface to greater than 8 m. For the program of works, the analytical data has been initially screened against the most conservative investigation level arising from the sand soil category.
- Soil: Health investigation Levels (HILs) for commercial/industrial land use for non-hydrocarbons.
- Soil: Ecological investigation levels (EILs) for commercial/industrial land use for non-hydrocarbons.
- Groundwater: Groundwater Investigation Levels (GILs) for marine waters, as the marine environment is the ultimate ecological receptor for groundwater.

7.0 FIELDWORK

7.1 Soil Investigation

Details of the soil investigation methodology for the contamination assessment are summarised in **Table 2** below.

Table 2: Field Activities - Drilling and Soil Sampling

Activity	Details
Drilling	Soil sampling for the original contamination assessment was conducted from 16 to 18 December 2015 and the supplementary investigation was conducted on 10 October 2016. Locations targeting potentiating contaminating activities are as follows: ■ Broad scale site coverage for residues associated with historical use of AFFF at the airport: AM-BH1 to AM-BH9, AM-BH17, AM-BH19 and AM-BH28, AM-BH30 to AM-BH32. ■ CSR Site 28 (black sands): AM-20 to AM-23 (some of these investigations locations are within the Stage 2 investigation area, but are included in this report for clarity). The boreholes were advanced to depths of 3 m using hollow flight augers or push tube technology, mounted on a light tracked vehicle. Borehole locations are presented in **Figure 1**. Borehole drilling was carried out under the supervision of a geotechnical engineer from Golder. Soil descriptions for the lithology encountered during drilling are presented as borehole logs in **Appendix B**.
Borehole Survey	Upon completion of intrusive investigations selected locations were surveyed by MPA Surveyors using differential GPS for easting, northing and RL. Remaining locations and levels were inferred from the survey plan provided by BAC (received 24 November 2015).
Soil Sampling	Soil samples for contamination assessment purposes were collected at 0.5 m intervals to 3 m bgl.
Decontamination Procedure	Samples were collected using disposable nitrile gloves and a decontaminated hand trowel. Non-dedicated soil sampling equipment was decontaminated using de-ionised water and rinsed with potable water between sampling locations.
Soil Screening	Collected soil samples were screened in the field using a photo-ionisation detector (PID) for the potential presence of volatile compounds.
Samples Preservation and Handling	Collected soil samples were placed in laboratory supplied containers. Sample containers were placed with ice, in eskies whilst on-site and in transit to the laboratory. All primary and duplicate samples were sent to Australian Laboratory Services (ALS) of Brisbane under Chain of Custody (CoC) procedures. Triplicate samples were sent to Eurofins of Brisbane under COC procedures. Laboratory documents are presented in **Appendix C**.
QA/QC	Quality Assurance/ Quality Control (QA/QC) programs were implemented for the original and supplementary investigations, and included the collection of duplicates and triplicates every 20 primary samples. No rinsate samples were collected.
Soil Analysis	Selected soil samples were analysed for the potential contaminants of concern identified in the desktop review, including: ▪ PFAS, extended suite. ▪ Total recoverable hydrocarbons (TRH) (with silica gel clean up) ▪ Benzene, toluene, ethylbenzene and xylenes (BTEX) ▪ Polycyclic aromatic hydrocarbons (PAH) ▪ Arsenic, cadmium, chromium, copper, lead, nickel, zinc and mercury (Heavy Metals) ▪ Organochlorine pesticides (OCP). Laboratory analytical reports are presented **Appendix C.**

7.1 Groundwater Investigation

Details of groundwater investigation methodology are summarised in Table 3 below.

Table 3: Field Activities - Groundwater Well Installation and Sampling

Activity	Details
Monitoring Well Installation and Construction	Five boreholes (AM-BH01, AM-BH04, AM-BH08, AM-BH19 and AM-BH28) from the December 2015 investigation and one borehole (AM-BH31) from the October 2016 investigation were converted into groundwater monitoring wells. **Figure 1** presents these new monitoring well locations and pre-existing historical monitoring wells (BIP/MW1, BIP/MW2, BIP/MW6, BAC-MW07 and BAC-MW-24). New monitoring wells were constructed using 50 mm, Class 18 PVC threaded screen and casing. Construction details for monitoring wells are presented on borehole reports in **Appendix B**.
Well Development	Following installation the new wells were developed using dedicated disposable bailers.
Well Gauging	Standing water levels (SWLs) were measured on 4 January 2016 and on 25 October 2016, using a water level meter. Groundwater gauging data are presented in Section 8.2, Table 4 and Table 6.
Well Purging and Sampling	On 4 January 2016, the wells were purged and sampled using dedicated disposable bailers. On 25 October 2016 purging and sampling was completed using a low flow peristaltic pump, equipped with disposable tubing. Groundwater quality parameters and visual observations were recorded during purging. Purging continued until three well volumes were removed or to stabilisation of quality parameters.
Sample Preservation and Handling	Collected water samples were placed in laboratory supplied containers. Samples were placed with ice, in eskies whilst on-site and in transit to the laboratory. All samples were sent to ALS of Brisbane under CoC procedures. Triplicate samples were sent to Eurofins of Brisbane under COC procedures. Laboratory documents are presented in **Appendix C**.
QA/QC Samples	A QA/QC program was implemented for the contamination investigation which included the collection of duplicates and triplicates every 20 primary samples. No rinsate samples were collected.
Groundwater Analysis	The groundwater samples from all wells were analysed for PFAS, extended suite using ultra trace methods. Groundwater samples collected in the October 2016 monitoring round were analysed for PFAS and heavy metals. Laboratory analytical reports are presented in **Appendix C**.

8.0 INVESTIGATION FINDINGS

8.1 Sub-surface Conditions

Detailed information of subsurface conditions encountered at the site are described in Report of Boreholes (**Appendix B**).

A summary of typical subsurface conditions encountered is as follows:

- **Crust** – A desiccated layer generally comprising loose silty sand and sandy clay generally between 0.1 to 0.3 m bgl, over
- **Recent Alluvium (Holocene)** – Compressible, inter-bedded sandy clays and clayey sands (Upper Holocene) from approximately 0 to 3 m bgl (target depth).

The PID readings are considered to be indicative of background conditions. No odours or staining were noted that may indicate potential contamination.

8.2 Groundwater Levels and Quality

January 2016 Monitoring Event

Groundwater level readings were recorded during a site visit on 4 January 2016 in new and existing groundwater monitoring wells. **Table 4** summarises the groundwater measurements for the current investigation. It should be noted that BAC has not provided Golder with construction details and data of wells BAC-MW07 and BAC-MW24. Golder has assigned the respective identification to these monitoring wells for the purpose of this report only. Based on the measured groundwater levels, the general flow direction beneath the site is interpreted to be towards the west.

Table 4: Summary of Groundwater Level Observations – January 2016

Well ID	Depth to Groundwater (m bgl)	Groundwater RL (m AD)	Date and Time of Observations
AM-BH01	0.93	2.06	04/01/2016 AT 12:00 PM
AM-BH04	1.41	1.26	04/01/2015 AT 12.36 PM
AM-BH08	1.13	1.75	04/01/2016 AT 12:50 PM
AM-BH19	0.71	1.91	04/01/2016 AT 1:05 PM
AM-BH28	0.76	1.98	04/01/2016 AT 12:20 PM
BIP/MW1	1.27	1.53	04/01/2016 AT 12.36 PM
BIP/MW2	1.07	1.91	04/01/2016 AT 11:00 AM
BP/MW6	1.02	2.01	04/01/2016 AT 11:30 AM
BAC-MW07	1.24	1.66	04/01/2016 AT 1:32 PM
BAC-MW24	0.81	2.13	04/01/2016 AT 10:30 AM

Field measurements of groundwater quality parameters are summarised in **Table 5**.

Table 5: Summary of Groundwater Quality Parameters – January 2016

Well ID	pH	Conductivity (mS/cm)	Redox (mV)	Dissolved Oxygen (%)	Temperature (ºC)
AM-BH01	5.74	34.6	33.2	49.1	22
AM-BH04	6.06	24.0	-16	36	22.2
AM-BH08	5.69	23.7	39.6	47.6	23.3
AM-BH19	5.68	32.5	40.1	44.5	22.9
AM-BH28	6.06	39.9	18	39	22.5
BIP/MW1	4.30	22.0	150.6	53.3	23.2
BIP/MW2	6.50	43.1	-91.4	15.8	23.3
BPI/MW6	6.86	42.8	-88.7	33	24.1
BAC-MW07	6.6	36.8	-81.5	46.2	22.7
BAC-MW24	6.85	50.6	-101.7	47.1	27.8

October 2016 Monitoring Event

Groundwater level readings were recorded during the groundwater monitoring event completed on 25 October 2016 from a selection of 3 new wells and 2 pre-existing groundwater monitoring wells. **Table 6** summarises the groundwater measurements for the current investigation. Based on the measured groundwater levels in the limited selection of wells, the general flow direction beneath the site is interpreted to be towards the south west.

Table 6: Summary of Groundwater Level Observations – October 2016

Well ID	Depth to Groundwater (m bTOC)	Groundwater RL (m AD)	Date and Time of Observations
AM-BH08	1.75	1.76	25/10/2016 at 11.20am
AM-BH19	1.32	1.86	25/10/2016 at 10.20am
AM-BH31/MW31	1.69	1.71	25/10/2016 at 12.40pm
BIP/MW1	1.33	1.87	25/10/2016 at 01.00pm
BIP/MW2	1.29	1.85	25/10/2016 at 01.50pm

In comparison with January 2016, groundwater RL is unchanged in the wells by more than 0.05 m, with the exception of BIP/MW1, where groundwater RL is measured 0.34 m higher.

Field measurements of groundwater quality parameters are summarised in **Table 7**.

Table 7: Summary of Groundwater Quality Parameters – October 2016

Well ID	pH	Conductivity (mS/cm)	Redox (mV)	Dissolved Oxygen (mg/L)	Temperature (ºC)
AM-BH08	6.71	25.7	-19	0.80	22.6
AM-BH19	6.60	32.3	-323	0.62	20.4
AM-BH31/MW31	6.20	31.1	-171	1.39	20.7
BIP/MW1	3.65	20.0	227	1.83	21.5
BIP/MW2	6.74	42.3	-149	0.91	22.7

In comparison with January 2016, the following variations in groundwater quality are observed:

- pH has increased in the wells monitored, except BIP/MW1, where a decrease from 4.30 to 3.65 has occurred.
- electrical conductivity (and salinity) is generally unchanged, all wells fall in the brackish range
- redox conditions have moved from oxidising to reducing in wells AM-BH08 and AM-BH19, while oxidising conditions in BIP/MW1 and reducing conditions in BIP/MW2 are confirmed
- dissolved oxygen level appear to have significantly decreased.

8.3 Quality Assurance and Quality Control

8.3.1.1 Field QA/QC

Sampling equipment utilised during the field investigation did not contain Teflon® to prevent false positive results for PFAS.

Soil and groundwater samples analysed for PFAS were placed into laboratory-issued bottles specifically for the analysis of PFAS, and therefore free of any Teflon® liners.

In January 2016, two soil duplicates and two triplicate soil samples were submitted for analysis. Analysis of one soil field duplicate was not conducted as a result of an error on the Chain of Custody/Test Request form. Whilst this resulted in a QC frequency for field duplicates of less than data objectives, it is not considered to impact on the overall quality of the investigation as all QA/QC results returned *PFAS* concentrations below the laboratory limit of reporting.

One groundwater duplicate and one triplicate were also analysed during this investigation.

No QA/QC samples were collected during October 2016 investigation (as this was combined with the investigation for Stage 2 area, and all the QA/QC samples collected are discussed in the Stage 2 investigation area report).

8.3.1.2 Data Validation

The validity of analytical data was assessed by critical review of the QA/QC sample results. This was performed in accordance with USEPA guidelines as presented in the document *National Functional Guidelines for Superfund Organic Methods Data Review*, June 2008 (USEPA, 2008).

Accuracy and precision measurements from the appropriate QA/QC check samples were compared to assess the quality of the analytical data. The primary objective of the data validation process was to ensure that the data reported are suitable to be used to achieve the investigation objectives.

On the basis of the outcome of the validation procedures employed, the overall quality of the analytical data is considered to be of an acceptable standard for interpretive use. The following are noted:

- All samples were received under the appropriate COC documentation by the primary laboratory in appropriately preserved containers. A holding time breach was report for pH on a groundwater sample. Field pH measurement was utilised instead of this result. No holding time breaches were reported.
- A review of internal QA/QC checks indicates general compliance for internal laboratory duplicates, surrogates and method blanks. Minor non-conformances detected in matrix spikes (chromium and zinc) and laboratory control spikes (hexachlorobenzene) are not considered to limit the use of the laboratory results.
- Soil duplicate and triplicate samples yielded acceptable repeatability for PFAS.
- Groundwater duplicate and triplicate samples yielded acceptable repeatability for PFAS.

A data validation sheet has been completed and presented in **Appendix D**. Based on the above, we consider the laboratory test results to be representative and valid for the purposes of the investigation.

8.4 Soil Analysis

Laboratory test results for soil samples of PFAS results are summarised in Table 8. Table 9 is a summary of the soil sample results for heavy metals, TRH, BTEX, PAH and OCP.

The laboratory results on soil samples indicated:

- Concentrations of PFAS were below the laboratory detection limit and the adopted initial screening criteria for human health and ecological (terrestrial) assessment in all samples collected in the December 2015 investigation; with reference to the 2016 investigation, detection of PFAS are reported in shallow soil collected at AM-MW31 (PFTeDA reported at 0.0005 mg/kg, corresponding to the laboratory limit of reporting) and at AM-BH32 in saturated soil (PFOS reported at 0.0002 mg/kg, corresponding to the laboratory limit of reporting).
- Concentrations of heavy metals, TRH, BTEX, PAH and OCP were below the adopted guidelines for human health and environment assessment.

These results indicate that the presence of PFAS, heavy metals, TRH, BTEX, PAH and OCP contamination is at low levels, below the selected screening levels in the soils from this area. Where disturbed, these soils should be suitable for reuse at other locations at the airport or may be suitable for offsite reuse (subject to more detailed PFAS sampling of excavated materials).

Table 8: Soil Laboratory Results Summary for PFAS

ChemName	output unit	EQL (Dec-15)	EQL (Oct-16)	Interim Screening Levels - Human health - industrial (direct contact only)1	Interim Screening Levels - Ecological (terrestrial, commercial/ industrial 60% protection, low reliability) 1	Maximum total concentration level in soil used as cover material of a operating QLD landfill (mg/kg)2	Field_ID	AM-BH01	AM-BH01	AM-BH02	AM-BH02	AM-BH03	AM-BH03	AM-BH04	AM-BH04	AM-BH05	AM-BH05	AM-BH06	AM-BH06	AM-BH07	AM-BH07	AM-BH08

8.5 Groundwater Analysis

Laboratory test results for groundwater sample results are summarised in **Table 10** for PFAS and **Table 11** for metals.

The laboratory results from the original and supplementary investigations indicated:

- With the exception of BAC-MW07, all 6:2 FtS concentrations in all groundwater samples are below laboratory limits of reporting (LORs). All 6:2 FtS concentrations were well below interim screening levels for human health (drinking water) and aquatic ecosystem protection. The laboratory detection limit exceeds the interim screening level for human consumption of fish.
- PFOA (including related products) concentrations in groundwater samples were below interim screening levels for human health (drinking water), aquatic ecosystem protection and human consumption of fish, as well as below enHealth drinking and recreational waters guidelines and below LORs, both in January 2016 and October 2016.
- PFOS+PFHxS (including related products) concentrations in all groundwater samples are below the interim screening levels for human health (drinking water) and aquatic ecosystems protection as well as below enHealth drinking and recreational waters guidelines and below LORs, both in January 2016 and October 2016. PFOS detected concentrations and the laboratory reporting limit exceed the interim screening level for human consumption of fish in both the 2016 sampling events.
- Other PFAS compounds were reported in wells AM-BH08, AM-BH09, BIP/MW1 and BIP/MW2 monitored in January and October 2016.
- Exceedances of the AEPR and NEPM GILs for marine waters are noted for nickel and zinc in well AM-MW31 (the only well tested for metals, in October 2016 only).

These results indicate that contamination management will be required if impacted groundwater is encountered and/or extracted (i.e. for dewatering) during construction works. Refer to CSM and qualitative risk assessment in Section 9 and Section 10 respectively.

9.0 CONCEPTUAL SITE MODEL

9.1 Developing the Conceptual Site Model (CSM)

In accordance with Schedule B1 of the NEPM 2013, a CSM has been developed for the site to assess identified contamination in relation to its current condition and planned disturbances of soil and groundwater. The essential elements of the CSM have been identified in the guidelines as the following:

- Known and potential sources of contamination and contaminants of concern including the mechanism(s) of contamination (i.e. nature of the source release into the environment).
- Potentially affected media (soil, sediment, groundwater, surface water, indoor and ambient air). This project focuses on groundwater and surface water as the affected media.
- Human and ecological receptors.
- Potential and complete exposure pathways.

The above elements have been addressed in the following sections.

9.2 Contaminants of Interest

The results of the desktop assessment (Section 4) and the investigations (Section 8) identified the following contaminants of interest:

Groundwater
PFOS and its related products and 6:2 FtS detected in some groundwater samples at levels exceeding surface water interim screening level for human consumption of fish.
6:2 FtS and PFOS laboratory detection levels exceed surface water interim screening level for human consumption of fish.
Nickel and zinc exceed Marine Waters guidelines presented in the AEPR 1997 and NEPM 2013 (GILs) in one well installed on site.

The low levels of PFAS, heavy metals and TRH detected in the soils at the Stage 1 investigation area of the Auto Mall precinct are not considered to represent contamination requiring management if disturbed.

The site soils are considered to be suitable for reuse at other locations at the airport, without restriction.

Low levels of PFAS inside soil may become mobilised in groundwater as a result of surcharging activities consolidating these materials below the water table. It is not expected that these impacts will be greater that the level of PFAS currently detected in groundwater.

On this basis, soil contamination is not considered further in this CSM or in the Qualitative Risk Assessment.

PFAS and heavy metals contamination in groundwater is further considered in this CSM and Qualitative Risk Assessment.

9.3 Sources

A source of PFAS was not present at the Auto Mall Precinct site. Low level and diffuse PFAS impact was detected in five of the ten groundwater investigation locations.

Heavy metals identified in groundwater could potentially be associated with the historical use of the site as construction yard, but this in only inferred at this stage.

For dewatering activities in these areas, the extracted groundwater represents a source of contamination that could be released to the environment and will require management.

9.4 Receptors

The key receptors for identified groundwater contamination at the investigation sites comprise:

- **General public**: Persons who may consume fish or other aquatic species from surface water bodies into which groundwater has been discharged (either directly through dewatering discharge or indirectly as a groundwater discharge into the receiving environment), and may access the surface water bodies for recreational use. Adjacent surface water bodies comprise:
  - Manmade surface drains: Surface drain will be formed around the perimeter of the Auto Mall Precinct site. These drains will connect to existing artificial surface drains to the north and south west of site. The artificial drains are semi tidal and discharge into tidal drains (the Kedron Brook Floodway Drain about 1 km north west or a tributary of Shultz Canal 1.5 km south west of this site). Both of these drains discharge into Kedron Brook, which ultimately drains into Moreton Bay.
- **Aquatic ecosystems**: As heavy metals are reported in concentrations exceeding guidelines for the protection of the marine waters, aquatic ecosystems are considered as potential receptors in surface water bodies into which groundwater has been discharged (either directly through dewatering discharge or indirectly as a groundwater discharge into the receiving environment). Titanium is less likely than nickel and zinc to be mobile as it is part of the crystalline structure of the minerals.

Results of the groundwater investigation and other Golder investigations within the vicinity of the site indicate that the groundwater quality beneath the proposed development is impacted with low levels of PFAS, due to historical offsite activities, and heavy metals. No further impacts to groundwater are expected due to site contamination. Furthermore, the brackish nature of the groundwater would make it unviable as a source of potable water, and unsuitable for agriculture or other beneficial use.

Site workers who may come in direct contact with groundwater are not considered to be key receptors as the PFAS concentrations detected in all groundwater samples were well below interim screening levels for drinking water, and dermal absorption via direct contact is not a pathway for PFAS in humans.

Terrestrial ecosystems are not considered to be key receptors as the PFAS concentrations detected (in the parts per billion) in the groundwater are so low that their application to soil would not result in detection (in parts per million). The PFAS concentration reported in soils were below the ecological screening levels.

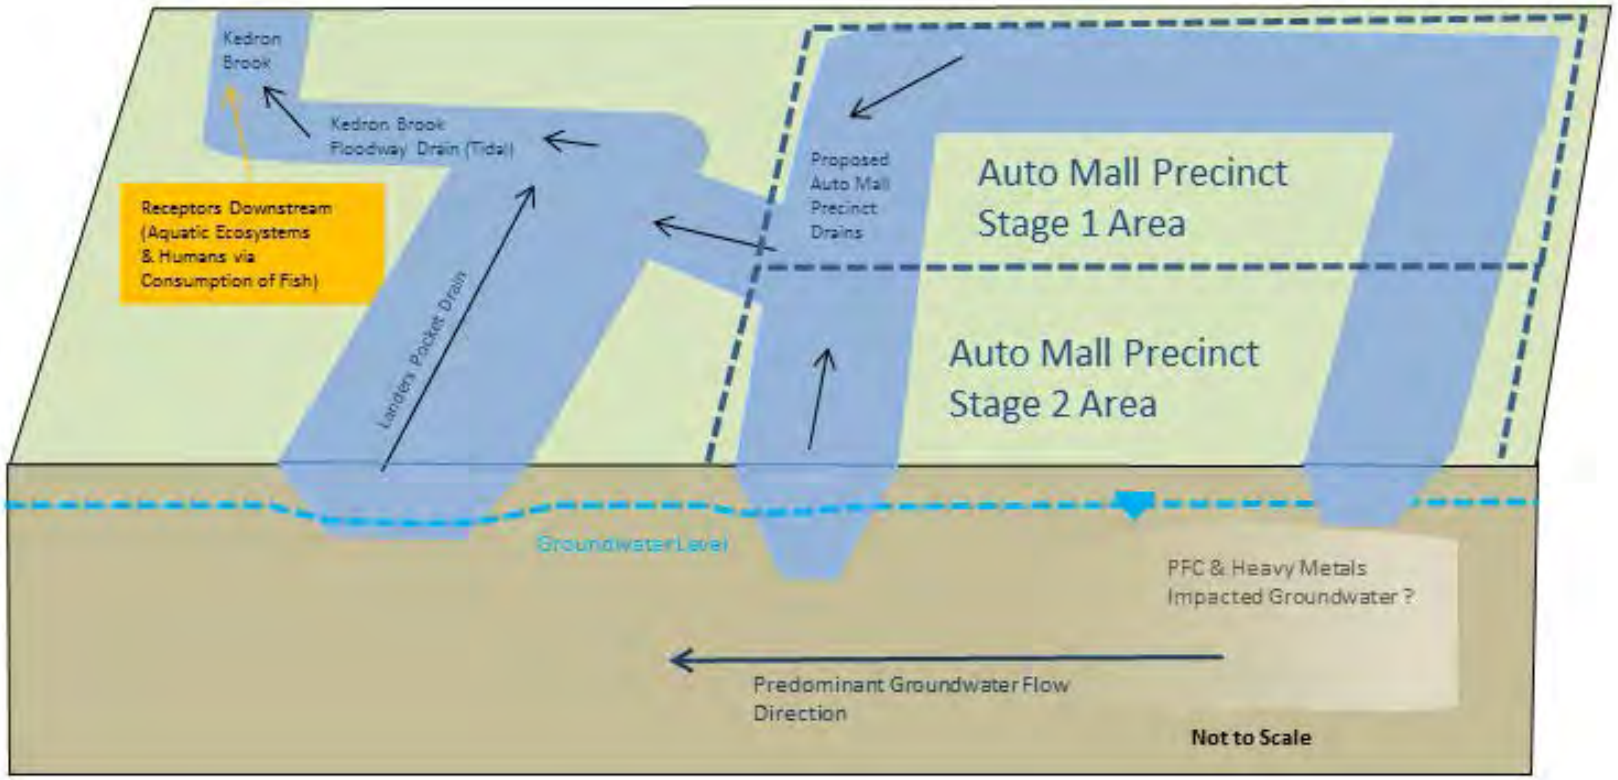
9.5 Pathways for Exposure to PFAS Impacted Groundwater

The key contaminant transport pathways for PFAS-impacted groundwater are:

- **Groundwater migration to surface water bodies**: localised groundwater flow beneath the site is expected to be in a westerly direction towards Landers Pocket drain, which discharges into the Kedron Brook Floodway Drain. Depending on the level of dilution and the resulting concentrations in the ultimate receiving water body, humans may be exposed to unacceptable concentrations of PFAS through the consumption of fish/aquatic species.
- **Surface water discharge of groundwater seepage entering excavations**: Currently planned construction activities include excavation of drainage channels to an invert level of RL 0.2 m AD across the site. Groundwater was recently measured at an average level of RL 1.2 m AD. It is expected that groundwater seepage will enter excavations for the drainage channels and be discharged to the existing surface drainage networks. Depending on the level of dilution and the resulting concentrations in the ultimate receiving water body, humans may be exposed to unacceptable concentrations of PFAS through the consumption of fish/aquatic species, and aquatic ecosystems to unacceptable concentrations of heavy metals.

9.6 Conceptual Site Model Schematic

A schematic of the Auto Mall Precinct CSM is shown below.



10.0 ENVIRONMENTAL RISK ASSESSMENT

10.1 Qualitative Assessment

Risk is measured as a function of the likelihood and consequence of an event occurring. This risk assessment has been completed with the consideration of source - pathway - receptors, as described in the conceptual site model above and is in general accordance with the NEPM 2013.

The qualitative risk assessment was undertaken in general accordance with AS/NZS ISO 31000:2009 Risk management - Principles and guidelines and adopting the likelihood, consequence rankings summarised below.

Qualitative Risk Assessment Rankings

Likelihood (L)	Description	Consequences (C)	Description
1) Rare	Impact is unlikely to occur within lifetime of project operations. No further management or engineering controls are required to minimise potential for occurrence	1) Low	Negligible or acceptable impact. No further management or engineering controls are required assuming no change to current conditions.
2) Low	Minor management control may need to be considered to reduce likelihood of occurrence.	2) Low to Moderate	Impact may be acceptable. Further monitoring is required to establish potential significance. Implementation of simple management controls.
3) Moderate	Impact has moderate likelihood of occurrence. Appropriate management control can result in low likelihood of occurrence.	3) Moderate	Moderate impact. Potentially acceptable if appropriate management controls are implemented.
4) High	Appropriate management control may not be sufficient to minimise likelihood and thus engineering or design solution may need to be considered.	4) Moderate to High	Impact has the potential to be unacceptable. Further monitoring may be required to establish potential significance. Implementation of appropriate management controls is required.
5) Almost Certain	Impact is believed to be inevitable or has already occurred. Management controls cannot practically minimise likelihood of occurrence to acceptable levels. Engineering or design solutions are required, if possible.	5) High	Unacceptable impact. The potential impact has a high severity and cannot necessarily be managed, should it occur.

The resulting qualitative risk ranking matrix adopted for the assessment is presented below.

Qualitative Risk Assessment Ranking Matrix

Risk Ranking (RR)	Consequences (C)				
Likelihood (L)	1) Low	2) Low to Moderate	3) Moderate	4) Moderate to High	5) High
6) Rare	1 (Low)	2 (Low)	3 (Low)	4 (Low)	5 (Moderate)
7) Low	2 (Low)	4 (Low)	6 (Moderate)	8 (Moderate)	10 (Moderate)
8) Moderate	3 (Low)	6 (Moderate)	9 (Moderate)	12 (Moderate)	15 (High)
9) High	4 (Low)	8 (Moderate)	12 (Moderate)	16 (High)	20 (High)
10) Certain	5 (Moderate)	10 (Moderate)	15 (High)	20 (High)	25 (High)

Where:

- Low Risk Ranking: Score 0 to 4. Acceptable, no specific management and/or engineering controls typically necessary.
- Moderate Risk Ranking: Score 5 to 15. Potentially acceptable subject to appropriate management and/or engineering controls.
- High Risk Ranking: Score 15 and above. Not acceptable. Engineering controls generally required, possibly in conjunction with management controls.

Ranking for the source-pathway-receptor identified in the CSM are summarised below.

Risk Rankings

Receptors	Pathways	Assessment Factors	L	C	RR	Summary Item
Human Receptors						
General Public	Consumption of Fish (Groundwater migration to surface water bodies) PFAS	A dilution factor of about 11[2] would be required to reduce the highest detected groundwater PFAS concentrations below interim screening levels. A much greater dilution factor is expected for discharge of groundwater into the nearby surface water bodies	1	3	3	Low risk No further control measures
	Consumption of Fish (Groundwater seepage into proposed site drains and discharge into nearby surface water bodies) PFAS	The above considerations also apply to this pathway. It is expected that discharge of the volume of groundwater into the proposed drains alone (not including rainfall runoff) into connecting tidal drains will result in a much greater dilution factor than 11 (the dilution factor required for the highest detected groundwater PFAS concentration)..	1	3	3	Low risk No further control measures
Ecological receptors						
Aquatic ecosystems	Toxicity effects of heavy metals (Groundwater migration to surface water bodies)	A dilution factor of about 8[3] would be required to reduce the highest detected groundwater heavy metal concentrations below the proposed guideline. A much greater dilution factor is expected for discharge of groundwater into the nearby surface water bodies	1	2	2	Low risk No further control measures

[2] Calculated as the maximum concentration of any PFAS compound in groundwater in January and October 2016 divided by the corresponding Human Health Screening Level.

[3] Calculated as the maximum concentration of any heavy metal exceeding guidelines in groundwater divided by the corresponding exceeded guideline.

Receptors	Pathways	Assessment Factors	L	C	RR	Summary Item
	Toxicity effects of heavy metals (Groundwater seepage into proposed site drain and discharge into nearby surface water bodies)	The above considerations also apply to this pathway. It is expected that discharge of the volume of groundwater into the proposed drains alone (not including rainfall runoff) into connecting tidal drains will result in a much greater dilution factor than 13 (the dilution factor required for the highest detected groundwater heavy metal concentration).	1	2	2	Low risk No further control measures

11.0 CONCLUSION AND RECOMMENDATIONS

Based on the results of the contamination assessment, the following conclusions are drawn for the Stage 1 investigation area of the Auto Mall precinct.

- A low potential for soil contamination was indicated by field investigation results. No PFAS, heavy metals, TRH, BTEX, PAH and OCP concentrations above the proposed screening levels were detected in any soil samples. Where disturbed, soils from this area should be suitable for reuse at other locations at the airport without restriction. The soils may also be suitable for offsite reuse subject to more detailed sampling of excavated materials.
- Low levels of PFAS impact were detected in groundwater samples from 5 of the 10 groundwater wells analysed in January 2016, and 4 of the 5 wells analysed in October 2016.
- Site workers who may come in direct contact with groundwater are not considered to be key receptors as the PFAS concentrations detected in all groundwater samples were well below interim screening levels for drinking water.
- Aquatic ecosystems are not considered to be key receptors, as the PFAS concentrations in groundwater are below the interim screening levels for toxicity effects on aquatic organisms. However, a residual low risk to aquatic ecosystems is represented by heavy metals concentrations in groundwater.
- All groundwater samples had PFAS concentrations exceeding the surface water interim screening level for human consumption of fish/aquatic species. It is noted that the interim screening level is a factor of 3 times lower than the limit of reporting available at commercial analytical laboratories in Australia, using Ultratrace® methods, and therefore even non-detect results exceed this interim screening level. The interim screening level applies to the receiving water after dilution and its use to evaluate groundwater concentration (without dilution considerations) is conservative.
- A qualitative risk assessment for the PFAS concentrations detected in groundwater beneath this site, suggests a low risk outcome for subsequent human consumption of fish/aquatic species associated with groundwater migration to the nearby and downstream surface water bodies.
- A qualitative risk assessment of expected PFAS impacted groundwater seepage entering the proposed site drain suggests a low risk outcome for subsequent human consumption of fish/aquatic species from downstream tidal drains and waterways.

Development of a Contamination Management Plan for the Stage 1 investigation area of the Auto Mall Precinct is not considered to be warranted.

12.0 IMPORTANT INFORMATION

Your attention is drawn to the document *Important Information Relating to this Report*, which is included in **Appendix E** of this report. The statements presented in that document are intended to inform a reader of the report about its proper use. There are important limitations as to who can use the report and how it can be used. It is important that a reader of the report understands and has realistic expectations about those matters. The Important Information document does not alter the obligations Golder Associates has under the contract between it and its client.

Quote number	: ----	No. of samples analysed	: 55

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results

NATA Accredited Laboratory 825

Accredited for compliance with ISO/IEC 17025.

Signatories

This document has been electronically signed by the authorized signatories indicated below. Electronic signing has been carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Ben Felgendrejeris		Brisbane Acid Sulphate Soils, Stafford, QLD
Edwandy Fadjar	Organic Coordinator	Sydney Inorganics, Smithfield, NSW
Gaston Allende	R&D Chemist	Sydney Organics, Smithfield, NSW
Shobhna Chandra	Metals Coordinator	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.

- Due to a Laboratory Error analysis on sample EB1538408-030 (AM-BH02-2.75-3.00) could not be conducted.
- ASS: EA037 (Rapid Field and F(ox) screening): pH F(ox) Reaction Rate: 1 - Slight; 2 - Moderate; 3 - Strong; 4 - Extreme
- EA037 ASS Field Screening: NATA accreditation does not cover performance of this service.
- PFOS and PFOA results are reported as an aggregate of linear and branched isomers.

QUALITY CONTROL REPORT

Work Order	: **EB1538408**	Page	: 1 of 8
Client	: **GOLDER ASSOCIATES**	Laboratory	: Environmental Division Brisbane
Contact	: MS KRYSTLE-RAE BIRAM	Contact	: Tom Maloney
Address	: P O BOX 1734 MILTON QLD, AUSTRALIA 4064	Address	: 2 Byth Street Stafford QLD Australia 4053
E-mail	: kbiram@golder.com.au	E-mail	: Tom.Maloney@alsglobal.com
Telephone	: +61 07 3721 5400	Telephone	: +61-7-3243 7222
Facsimile	: +61 07 3721 5401	Facsimile	: +61-7-3243 7218
Project	: 1538021	QC Level	: NEPM 2013 B3 & ALS QC Standard
Order number	: 1538021	Date Samples Received	: 18-Dec-2015
C-O-C number	: ----	Date Analysis Commenced	: 23-Dec-2015
Sampler	: TAMARA SICCAMA	Issue Date	: 08-Jan-2016
Site	: ----	No. of samples received	: 72
Quote number	: ----	No. of samples analysed	: 55

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

NATA WORLD RECOGNISED ACCREDITATION

NATA Accredited Laboratory 825

Accredited for compliance with ISO/IEC 17025.

Signatories

This document has been electronically signed by the authorized signatories indicated below. Electronic signing has been carried out ir compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Ben Felgendrejeris		Brisbane Acid Sulphate Soils, Stafford, QLD
Edwandy Fadjar	Organic Coordinator	Sydney Inorganics, Smithfield, NSW
Gaston Allende	R&D Chemist	Sydney Organics, Smithfield, NSW
Shobhna Chandra	Metals Coordinator	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR:- 0% - 50%; Result > 20 times LOR:0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EB1538408**	Page	: 1 of 5
Client	: **GOLDER ASSOCIATES**	Laboratory	: Environmental Division Brisbane
Contact	: MS KRYSTLE-RAE BIRAM	Telephone	: +61-7-3243 7222
Project	: 1538021	Date Samples Received	: 18-Dec-2015
Site	: ----	Issue Date	: 08-Jan-2016
Sampler	: TAMARA SICCAMA	No. of samples received	: 72
Order number	: 1538021	No. of samples analysed	: 55

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Frequency of Quality Control Samples

Matrix: **SOIL**

Quality Control Sample Type	Count		Rate (%)		Quality Control Specification
Method	QC	Regular	Actual	Expected	
Laboratory Duplicates (DUP)					
Moisture Content	2	24	8.33	10.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
ASS Field Screening Analysis	* EA037	SOIL	In house: Referenced to Acid Sulfate Soils Laboratory Methods Guidelines, version 2.1 June 2004. As received samples are tested for pH field and pH fox and assessed for a reaction rating.
Moisture Content	EA055-103	SOIL	In-house. A gravimetric procedure based on weight loss over a 12 hour drying period at 103-105 degrees C. This method is compliant with NEPM (2013) Schedule B(3) Section 7.1 and Table 1 (14 day holding time).
Perfluorooctyl Acids and Sulfonates by LC/MS/MS	EP231	SOIL	In-House. A portion of soil is soaked in sodium hydroxide followed by extraction with methanol. The extract is neutralised with HCl and an aliquot taken to dryness, made up in mobile phase. Analysis is by LC/MSMS, ESI Negative Mode using MRM.
Perfluorinated Compounds by LCMSMS	EP231-PFC	SOIL	In-House. A portion of soil is extracted with MTBE. The extract is taken to dryness, made up in mobile phase. Analysis is by LC/MSMS, ESI Negative Mode using MRM.

Preparation Methods	Method	Matrix	Method Descriptions
Drying only	EN020D	SOIL	In House

Project	: 1538021	Page	: 1 of 4
Order number	: 1538021	Quote number	: EM2015GOLASS0592 (EN-002-15)
C-O-C number	: ----	QC Level	: NEPM 2013 B3 & ALS QC Standard
Site	: ----		
Sampler	: TAMARA SICCAMA		

Dates

Date Samples Received	: 18-Dec-2015 4:00 PM	Issue Date	: 22-Dec-2015
Client Requested Due Date	: 04-Jan-2016	Scheduled Reporting Date	: **04-Jan-2016**

Delivery Details

Mode of Delivery	: Client Drop Off	Security Seal	: Not Available
No. of coolers/boxes	: 6	Temperature	: 6.3, 8.2, 9.1, 0.9, 3.2, 3.7°C - Ice present
Receipt Detail	:	No. of samples received / analysed	: 72 / 56

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- **PFOS/PFOA analysis will be conducted by ALS Environmental, Sydney, NATA accreditation no. 825, Site No. 10911 (Micro site no. 14913). The expected due date for this data is 11/01/2015.**
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (14 days), Solid (60 days) from date of completion of work order.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exist.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

Matrix: **SOIL**

Laboratory sample ID	Client sampling date / time	Client sample ID	(On Hold) SOIL No analysis requested	SOIL - EA037 ASS Field Screening Analysis	SOIL - EA055-103 Moisture Content	SOIL - EP231-PFC Perfluorinated Compounds by LC/MS/MS

Project	: 1538021	QC Level	: NEPM 2013 B3 & ALS QC Standard
Order number	: 1538021	Date Samples Received	: 18-Dec-2015 16:00
C-O-C number	: ----	Date Analysis Commenced	: 23-Dec-2015
Sampler	: TAMARA SICCAMA	Issue Date	: 12-Jan-2016 12:51
Site	: ----		
		No. of samples received	: 70
Quote number	: ----	No. of samples analysed	: 55

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results

NATA Accredited Laboratory 825

Accredited for compliance with ISO/IEC 17025.

Signatories

This document has been electronically signed by the authorized signatories indicated below. Electronic signing has been carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Gaston Allende	R&D Chemist	Sydney Organics, Smithfield, NSW
Kim McCabe	Senior Inorganic Chemist	Brisbane Acid Sulphate Soils, Stafford, QLD
Nanthini Coilparampi	Laboratory Manager - Inorganics	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.

- ASS: EA037 (Rapid Field and F(ox) screening): pH F(ox) Reaction Rate: 1 - Slight; 2 - Moderate; 3 - Strong; 4 - Extreme
- EA037 ASS Field Screening: NATA accreditation does not cover performance of this service.
- PFOS and PFOA results are reported as an aggregate of linear and branched isomers.

Project	: 1538021	QC Level	: NEPM 2013 B3 & ALS QC Standard
Order number	: 1538021	Date Samples Received	: 18-Dec-2015
C-O-C number	: ----	Date Analysis Commenced	: 23-Dec-2015
Sampler	: TAMARA SICCAMA	Issue Date	: 12-Jan-2016
Site	: ----	No. of samples received	: 70
Quote number	: ----	No. of samples analysed	: 55

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

NATA WORLD RECOGNISED ACCREDITATION

NATA Accredited Laboratory 825

Accredited for compliance with ISO/IEC 17025.

Signatories

This document has been electronically signed by the authorized signatories indicated below. Electronic signing has been carried out ir compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Gaston Allende	R&D Chemist	Sydney Organics, Smithfield, NSW
Kim McCabe	Senior Inorganic Chemist	Brisbane Acid Sulphate Soils, Stafford, QLD
Nanthini Coilparampi	Laboratory Manager - Inorganics	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR:- 0% - 50%; Result > 20 times LOR:0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EB1538415**	Page	: 1 of 5
Client	: **GOLDER ASSOCIATES**	Laboratory	: Environmental Division Brisbane
Contact	: MS KRYSTLE-RAE BIRAM	Telephone	: +61-7-3243 7222
Project	: 1538021	Date Samples Received	: 18-Dec-2015
Site	: ----	Issue Date	: 12-Jan-2016
Sampler	: TAMARA SICCAMA	No. of samples received	: 70
Order number	: 1538021	No. of samples analysed	: 55

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Analysis Holding Time Compliance

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
ASS Field Screening Analysis	* EA037	SOIL	In house: Referenced to Acid Sulfate Soils Laboratory Methods Guidelines, version 2.1 June 2004. As received samples are tested for pH field and pH fox and assessed for a reaction rating.
Moisture Content	EA055-103	SOIL	In-house. A gravimetric procedure based on weight loss over a 12 hour drying period at 103-105 degrees C. This method is compliant with NEPM (2013) Schedule B(3) Section 7.1 and Table 1 (14 day holding time).
Perfluorooctyl Acids and Sulfonates by LC/MS/MS	EP231	SOIL	In-House. A portion of soil is soaked in sodium hydroxide followed by extraction with methanol. The extract is neutralised with HCl and an aliquot taken to dryness, made up in mobile phase. Analysis is by LC/MSMS, ESI Negative Mode using MRM.
Perfluorinated Compounds by LCMSMS	EP231-PFC	SOIL	In-House. A portion of soil is extracted with MTBE. The extract is taken to dryness, made up in mobile phase. Analysis is by LC/MSMS, ESI Negative Mode using MRM.

Preparation Methods	Method	Matrix	Method Descriptions
Drying only	EN020D	SOIL	In House

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- **PFOS/PFOA analysis will be conducted by ALS Environmental, Sydney, NATA accreditation no. 825, Site No. 10911 (Micro site no. 14913). The expected due date for his data is 11/01/2016.**
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (14 days), Solid (60 days) from date of completion of work order.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exist.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

Quote number	: ----	No. of samples analysed	: 54

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results

Signatories

This document has been electronically signed by the authorized signatories indicated below. Electronic signing has been carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	Position	Accreditation Category
Gaston Allende	R&D Chemist	Sydney Organics, Smithfield, NSW
Hoa Nguyen	Senior Inorganic Chemist	Sydney Inorganics, Smithfield, NSW
Kim McCabe	Senior Inorganic Chemist	Brisbane Acid Sulphate Soils, Stafford, QLD Brisbane Inorganics, Stafford, QLD
Matt Frost	Senior Organic Chemist	Brisbane Organics, Stafford, QLD
Nanthini Coilparampi	Laboratory Manager - Inorganics	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.

- EG005T (Total Metals): Sample EB1538312-001 shows poor matrix spike recovery due to sample heterogeneity. Confirmed by visual inspection.
- ASS: EA037 (Rapid Field and F(ox) screening): pH F(ox) Reaction Rate: 1 - Slight; 2 - Moderate; 3 - Strong; 4 - Extreme
- EA037 ASS Field Screening: NATA accreditation does not cover performance of this service.
- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.
- PFOS and PFOA results are reported as an aggregate of linear and branched isomers.

Project	: 1538021	QC Level	: NEPM 2013 B3 & ALS QC Standard
Order number	: 1538021	Date Samples Received	: 18-Dec-2015
C-O-C number	: ----	Date Analysis Commenced	: 23-Dec-2015
Sampler	: TAMARA SICCAMA	Issue Date	: 06-Jan-2016
Site	: ----	No. of samples received	: 77
Quote number	: ----	No. of samples analysed	: 54

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Signatories

This document has been electronically signed by the authorized signatories indicated below. Electronic signing has been carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	Position	Accreditation Category
Gaston Allende	R&D Chemist	Sydney Organics, Smithfield, NSW
Hoa Nguyen	Senior Inorganic Chemist	Sydney Inorganics, Smithfield, NSW
Kim McCabe	Senior Inorganic Chemist	Brisbane Acid Sulphate Soils, Stafford, QLD
		Brisbane Inorganics, Stafford, QLD
Matt Frost	Senior Organic Chemist	Brisbane Organics, Stafford, QLD
Nanthini Coilparampi	Laboratory Manager - Inorganics	Sydney Inorganics, Smithfield, NSW

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR:- 0% - 50%; Result > 20 times LOR:0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EB1538419**	Page	: 1 of 7
Client	: **GOLDER ASSOCIATES**	Laboratory	: Environmental Division Brisbane
Contact	: MS KRYSTLE-RAE BIRAM	Telephone	: +61-7-3243 7222
Project	: 1538021	Date Samples Received	: 18-Dec-2015
Site	: ----	Issue Date	: 06-Jan-2016
Sampler	: TAMARA SICCAMA	No. of samples received	: 77
Order number	: 1538021	No. of samples analysed	: 54

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **Laboratory Control outliers exist - please see following pages for full details.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Laboratory Control Spike (LCS) Recoveries							
EP068A: Organochlorine Pesticides (OC)	QC-319065-002	----	**Hexachlorobenzene (HCB)**	118-74-1	120 %	54-112%	**Recovery greater than upper control limit**
Matrix Spike (MS) Recoveries							
EG005T: Total Metals by ICP-AES	EB1538312--001	Anonymous	**Chromium**	7440-47-3	58.8 %	70-130%	**Recovery less than lower data quality objective**
EG005T: Total Metals by ICP-AES	EB1538312--001	Anonymous	**Zinc**	7440-66-6	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**

Analysis Holding Time Compliance

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
ASS Field Screening Analysis	* EA037	SOIL	In house: Referenced to Acid Sulfate Soils Laboratory Methods Guidelines, version 2.1 June 2004. As received samples are tested for pH field and pH fox and assessed for a reaction rating.
Moisture Content	EA055-103	SOIL	In-house. A gravimetric procedure based on weight loss over a 12 hour drying period at 103-105 degrees C. This method is compliant with NEPM (2013) Schedule B(3) Section 7.1 and Table 1 (14 day holding time).
Total Metals by ICP-AES	EG005T	SOIL	In house: Referenced to APHA 3120; USEPA SW 846 - 6010. Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM (2013) Schedule B(3)
Total Mercury by FIMS	EG035T	SOIL	In house: Referenced to AS 3550, APHA 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM (2013) Schedule B(3)
Pesticides by GCMS	EP068	SOIL	(USEPA SW 846 - 8270B) Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM (2013) Schedule B(3) (Method 504,505)
TRH - Semivolatile Fraction (Silica Gel Clean Up)	EP071SG-S	SOIL	(USEPA SW 846 - 8015A) Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40.
PAH/Phenols (SIM)	EP075(SIM)	SOIL	(USEPA SW 846 - 8270B) Extracts are analysed by Capillary GC/MS in Selective Ion Mode (SIM) and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (2013) Schedule B(3) (Method 502 and 507)
TRH Volatiles/BTEX	EP080	SOIL	(USEPA SW 846 - 8260B) Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve.
Perfluorooctyl Acids and Sulfonates by LC/MS/MS	EP231	SOIL	In-House. A portion of soil is soaked in sodium hydroxide followed by extraction with methanol. The extract is neutralised with HCl and an aliquot taken to dryness, made up in mobile phase. Analysis is by LC/MSMS, ESI Negative Mode using MRM.
Perfluorinated Compounds by LCMSMS	EP231-PFC	SOIL	In-House. A portion of soil is extracted with MTBE. The extract is taken to dryness, made up in mobile phase. Analysis is by LC/MSMS, ESI Negative Mode using MRM.

Preparation Methods	Method	Matrix	Method Descriptions
Drying only	EN020D	SOIL	In House
Methanolic Extraction of Soils for Purge and Trap	ORG16	SOIL	(USEPA SW 846 - 5030A) 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS.
Tumbler Extraction of Solids	ORG17	SOIL	In-house, Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Extra samples 'AM-BH20 0.5-1.0', 'AM-BH20 1.0-1.5', 'AM-BH21 0.0-0.5', 'AM-BH21 1.0-1.5', 'AM-BH22 0.0-0.5', 'AM-BH22 0.5-1.0', 'AM-BH23 0.0-0.5' and 'AM-BH23 1.0-1.5' were received. These samples will remain on hold until confirmation of analysis is received. Please contact ALS Brisbane Client Services Department to add a directive for these samples at ALSEnviro.Brisbane@alsglobal.com**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- **PFOS/PFOA analysis will be conducted by ALS Environmental, Sydney, NATA accreditation no. 825, Site No. 10911 (Micro site no. 14913). The expected due date for this data is 11/01/2016.**
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (14 days), Solid (60 days) from date of completion of work order.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**
- **Sample 'QC1' is listed on the COC twice though only one sample with this name was received. It is listed both as on hold and requiring PFOS/PFOA. This sample will be kept on hold until confirmation of analysis is received.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exist.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

Matrix: **SOIL**

Laboratory sample ID	Client sampling date / time	Client sample ID	(On Hold) SOIL No analysis requested	SOIL - EA037 ASS Field Screening Analysis	SOIL - EA055-103 Moisture Content	SOIL - EP068A (solids) Organochlorine Pesticides by GCMS	SOIL - EP231-PFC Perfluorinated Compounds by LC/MS/MS	SOIL - S-02 8 Metals (incl. Digestion)	SOIL - S-07 SG TRH/BTEXN/PAH (SIM) inc Silica Gel Clean Up

Quote number	: ----	No. of samples analysed	: 11

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results

NATA Accredited Laboratory 825

Accredited for compliance with ISO/IEC 17025.

Signatories

This document has been electronically signed by the authorized signatories indicated below. Electronic signing has been carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Andrew Epps	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
Gaston Allende	R&D Chemist	Sydney Organics, Smithfield, NSW
Kim McCabe	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.

- EG020-F (Dissolved Metals by ICP-MS): Limit of reporting raised for some samples due to matrix interference.
- PFOS and PFOA results are reported as an aggregate of linear and branched isomers.

Project	: 1538021	QC Level	: NEPM 2013 B3 & ALS QC Standard
Order number	: 1538021	Date Samples Received	: 04-Jan-2016
C-O-C number	: ----	Date Analysis Commenced	: 07-Jan-2016
Sampler	: TAMARA SICCAMA	Issue Date	: 14-Jan-2016
Site	: ----	No. of samples received	: 11
Quote number	: ----	No. of samples analysed	: 11

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

NATA WORLD RECOGNISED ACCREDITATION

NATA Accredited Laboratory 825

Accredited for compliance with ISO/IEC 17025.

Signatories

This document has been electronically signed by the authorized signatories indicated below. Electronic signing has been carried out ir compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Andrew Epps	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
Gaston Allende	R&D Chemist	Sydney Organics, Smithfield, NSW
Kim McCabe	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR:- 0% - 50%; Result > 20 times LOR:0% - 20%.

Sub-Matrix: **WATER**

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **WATER**

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EB1600085**	Page	: 1 of 5
Client	: **GOLDER ASSOCIATES**	Laboratory	: Environmental Division Brisbane
Contact	: MS KRYSTLE-RAE BIRAM	Telephone	: +61-7-3243 7222
Project	: 1538021	Date Samples Received	: 04-Jan-2016
Site	: ----	Issue Date	: 14-Jan-2016
Sampler	: TAMARA SICCAMA	No. of samples received	: 11
Order number	: 1538021	No. of samples analysed	: 11

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Analysis Holding Time Compliance

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **WATER**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Method / Container / Client Sample ID(s)	Sample Date	Extraction / Preparation			Analysis		
		Date extracted	Due for extraction	Evaluation	Date analysed	Due for analysis	Evaluation
ED037P: Alkalinity by PC Titrator

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Alkalinity by PC Titrator	ED037-P	WATER	In house: Referenced to APHA 2320 B This procedure determines alkalinity by automated measurement (e.g. PC Titrate) using pH 4.5 for indicating the total alkalinity end-point. This method is compliant with NEPM (2013) Schedule B(3)
Acidity as Calcium Carbonate	ED038	WATER	In house: Referenced to APHA 2310 B Acidity is determined by titration with a standardised alkali to an end-point pH of 8.3. This method is compliant with NEPM (2013) Schedule B(3)
Sulfate (Turbidimetric) as SO4 2- by Discrete Analyser	ED041G	WATER	In house: Referenced to APHA 4500-SO4. Dissolved sulfate is determined in a 0.45um filtered sample. Sulfate ions are converted to a barium sulfate suspension in an acetic acid medium with barium chloride. Light absorbance of the BaSO4 suspension is measured by a photometer and the SO4-2 concentration is determined by comparison of the reading with a standard curve. This method is compliant with NEPM (2013) Schedule B(3)
Chloride by Discrete Analyser	ED045G	WATER	In house: Referenced to APHA 4500 Cl - G.The thiocyanate ion is liberated from mercuric thiocyanate through sequestration of mercury by the chloride ion to form non-ionised mercuric chloride.in the presence of ferric ions the librated thiocynate forms highly-coloured ferric thiocynate which is measured at 480 nm APHA 21st edition seal method 2 017-1-L april 2003
Dissolved Metals by ICP-MS - Suite A	EG020A-F	WATER	In house: Referenced to APHA 3125; USEPA SW846 - 6020, ALS QWI-EN/EG020. Samples are 0.45 um filtered prior to analysis. The ICPMS technique utilizes a highly efficient argon plasma to ionize selected elements. Ions are then passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to their measurement by a discrete dynode ion detector.
PFOS, PFOA, 6:2- and 8:2-FtS	EP231-LL	WATER	In-house: A portion of fresh or saline water is concentrated and cleaned up using a solid phase medium. Analysis by LC-Electrospray-MS-MS, Negative Mode using MRM.
Perfluorinated Compounds by LCMSMS - Low Level	EP231PFC-LL	WATER	In-house: Analysis of fresh and saline waters by solid phase extraction and LC-Electrospray-MS-MS, Negative Mode using MRM.

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- **Ultra-Trace PFC analysis will be conducted by ALS Environmental, Sydney, NATA accreditation no. 825, Site No. 10911 (Micro site no. 14913). The estimated date for this data is 13/01/2016.**
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (14 days), Solid (60 days) from date of completion of work order.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exist.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results (regarding both quality and NATA accreditation).

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Per- and Polyfluorinated Alkyl Substances (PFASs)	Brisbane	Dec 19, 2015	14 Day
- Method: LTM-ORG-2100 Analysis of PFCs in environmental samples by LC-MS/MS			
% Moisture	Brisbane	Dec 18, 2015	14 Day
- Method: LTM-GEN-7080 Moisture

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
4. Results are uncorrected for matrix spikes or surrogate recoveries.
5. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
6. Samples were analysed on an 'as received' basis. 7. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the Sample Receipt Advice.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per Kilogram

mg/l: milligrams per litre

ug/l: micrograms per litre

ppm: Parts per million

ppb: Parts per billion

%: Percentage

org/100ml: Organisms per 100 millilitres

NTU: Nephelometric Turbidity Units

MPN/100mL: Most Probable Number of organisms per 100 millilitres

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery
CRM	Certified Reference Material - reported as percent recovery
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands. In the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
Batch Duplicate	A second piece of analysis from a sample outside of the clients batch of samples but run within the laboratory batch of analysis.
Batch SPIKE	Spike recovery reported on a sample from outside of the clients batch of samples but run within the laboratory batch of analysis.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
ASLP	Australian Standard Leaching Procedure (AS4439.3)
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries : Recoveries must lie between 50-150% - Phenols 20-130%.

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxophene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxophene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Arochlor 1260 in Matrix Spikes and LCS's.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPD's are calculated from raw analytical data thus it is possible to have two sets of data.

Quality Control Results

Test	Units	Result 1			Acceptance Limits	Pass Limits	Qualifying Code

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Sample Receipt Advice

Company name:	**Golder Associates Pty Ltd (Qld)**
Contact name:	Tamara Siccama
Project name:	BNE AIRPORT
Project ID:	1538021
COC number:	Not provided
Turn around time:	5 Day
Date/Time received:	Dec 18, 2015 2:30 PM
Eurofins | mgt reference:	**484067**

Sample information

☑ A detailed list of analytes logged into our LIMS, is included in the attached summary table.

☑ Sample Temperature of a random sample selected from the batch as recorded by Eurofins | mgt Sample Receipt : 23.6 degrees Celsius.

☑ All samples have been received as described on the above COC.

☑ COC has been completed correctly.

☑ Attempt to chill was evident.

☑ Appropriately preserved sample containers have been used.

☑ All samples were received in good condition.

☑ Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.

☑ Appropriate sample containers have been used.

☒ Some samples have been subcontracted.

N/A Custody Seals intact (if used).

Contact notes

If you have any questions with respect to these samples please contact:

Mark Rodriquez on Phone : (+61) 8 8947 1557 or by e.mail: MarkRodriquez@eurofins.com.au

Results will be delivered electronically via e.mail to Tamara Siccama - tsiccama@golder.com.au.

13C8-PFOS (surr.)	1	%	56

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results (regarding both quality and NATA accreditation).

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Per- and Polyfluorinated Alkyl Substances (PFASs)	Brisbane	Jan 04, 2016	14 Day

- Method: LTM-ORG-2100 Analysis of PFCs in environmental samples by LC-MS/MS

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
4. Results are uncorrected for matrix spikes or surrogate recoveries.
5. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
6. Samples were analysed on an 'as received' basis. 7. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the Sample Receipt Advice.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per Kilogram

ug/l: micrograms per litre

ppb: Parts per billion

org/100ml: Organisms per 100 millilitres

MPN/100mL: Most Probable Number of organisms per 100 millilitres

mg/l: milligrams per litre

ppm: Parts per million

%: Percentage

NTU: Nephelometric Turbidity Units

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery
CRM	Certified Reference Material - reported as percent recovery
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands. In the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
Batch Duplicate	A second piece of analysis from a sample outside of the clients batch of samples but run within the laboratory batch of analysis.
Batch SPIKE	Spike recovery reported on a sample from outside of the clients batch of samples but run within the laboratory batch of analysis.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
ASLP	Australian Standard Leaching Procedure (AS4439.3)
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries : Recoveries must lie between 50-150% - Phenols 20-130%.

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxophene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxophene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Arochlor 1260 in Matrix Spikes and LCS's.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPD's are calculated from raw analytical data thus it is possible to have two sets of data.

Quality Control Results

Test	Units	Result 1			Acceptance Limits	Pass Limits	Qualifying Code

Sample Receipt Advice

Company name:	**Golder Associates Pty Ltd (Qld)**
Contact name:	Krystle-Rae Biram
Project name:	BRISBANE AIRPORT
Project ID:	1538021
COC number:	Not provided
Turn around time:	5 Day
Date/Time received:	Jan 4, 2016 4:15 PM
Eurofins | mgt reference:	**484700**

Sample information

☑ A detailed list of analytes logged into our LIMS, is included in the attached summary table.

☑ Sample Temperature of a random sample selected from the batch as recorded by Eurofins | mgt Sample Receipt : 4.8 degrees Celsius.

☑ All samples have been received as described on the above COC.

☑ COC has been completed correctly.

☑ Attempt to chill was evident.

☑ Appropriately preserved sample containers have been used.

☑ All samples were received in good condition.

☑ Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.

☑ Appropriate sample containers have been used.

☑ Sample containers for volatile analysis received with zero headspace.

☒ Some samples have been subcontracted.

N/A Custody Seals intact (if used).

Contact notes

If you have any questions with respect to these samples please contact:

Mark Rodriquez on Phone : (+61) 8 8947 1557 or by e.mail: MarkRodriquez@eurofins.com.au

Results will be delivered electronically via e.mail to Krystle-Rae Biram - KBiram@golder.com.au.

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Alex Rossi	Organic Chemist	Sydney Organics, Smithfield, NSW
Andrew Epps	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
Ben Felgendrejeris		Brisbane Acid Sulphate Soils, Stafford, QLD
Matt Frost	Senior Organic Chemist	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EG005T (Total Metals): Sample EB1624693-002 shows poor duplicate results due to sample heterogeneity. Confirmed by visual inspection.
- ASS: EA037 (Rapid Field and F(ox) screening): pH F(ox) Reaction Rate: 1 - Slight; 2 - Moderate; 3 - Strong; 4 - Extreme
- EA037 ASS Field Screening: NATA accreditation does not cover performance of this service.
- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.

QUALITY CONTROL REPORT

Work Order	: **EB1624693**	Page	: 1 of 13
Client	: **GOLDER ASSOCIATES**	Laboratory	: Environmental Division Brisbane
Contact	: MS KRYSTLE-RAE BIRAM	Contact	: Carsten Emrich
Address	: P O BOX 1734 MILTON QLD, AUSTRALIA 4064	Address	: 2 Byth Street Stafford QLD Australia 4053
Telephone	: +61 07 3721 5400	Telephone	: +61 7 3243 7222
Project	: 1538021	Date Samples Received	: 14-Oct-2016
Order number	: 1538021	Date Analysis Commenced	: 18-Oct-2016
C-O-C number	: ----	Issue Date	: 21-Oct-2016
Sampler	: MORGAN MIDGLEY		
Site	: Brisbane Airport		
Quote number	: ----		
No. of samples received	: 74		
No. of samples analysed	: 73		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Alex Rossi	Organic Chemist	Sydney Organics, Smithfield, NSW
Andrew Epps	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
Ben Felgendrejeris		Brisbane Acid Sulphate Soils, Stafford, QLD
Matt Frost	Senior Organic Chemist	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Spike (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EB1624693**	Page	: 1 of 9
Client	: **GOLDER ASSOCIATES**	Laboratory	: Environmental Division Brisbane
Contact	: MS KRYSTLE-RAE BIRAM	Telephone	: +61 7 3243 7222
Project	: 1538021	Date Samples Received	: 14-Oct-2016
Site	: Brisbane Airport	Issue Date	: 21-Oct-2016
Sampler	: MORGAN MIDGLEY	No. of samples received	: 74
Order number	: 1538021	No. of samples analysed	: 73

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **Duplicate outliers exist - please see following pages for full details.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Duplicate (DUP) RPDs							
EG005T: Total Metals by ICP-AES	EB1624693--002	AM-BH26 0.25-0.5	**Chromium**	7440-47-3	22.2 %	0% - 20%	**RPD exceeds LOR based limits**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
ASS Field Screening Analysis	* EA037	SOIL	In house: Referenced to Acid Sulfate Soils Laboratory Methods Guidelines, version 2.1 June 2004. As received samples are tested for pH field and pH fox and assessed for a reaction rating.
Moisture Content	EA055-103	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 103-105 degrees C. This method is compliant with NEPM (2013) Schedule B(3) Section 7.1 and Table 1 (14 day holding time).
Total Metals by ICP-AES	EG005T	SOIL	In house: Referenced to APHA 3120; USEPA SW 846 - 6010. Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM (2013) Schedule B(3)
Total Metals by ICP-MS - Suite R	EG020R-T	SOIL	In house: Referenced to APHA 3125; USEPA SW846 - 6020. Metals in solids are determined following an appropriate acid digestion. The ICPMS technique ionizes selected elements. Ions are passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass / charge ratios prior to measurement by a discrete dynode ion detector. This method is compliant with NEPM (2013) Schedule B(3)
Total Mercury by FIMS	EG035T	SOIL	In house: Referenced to AS 3550, APHA 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM (2013) Schedule B(3)
Pesticides by GCMS	EP068	SOIL	In house: Referenced to USEPA SW 846 - 8270D Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM (2013) Schedule B(3) (Method 504,505)
TRH - Semivolatile Fraction (Silica Gel Clean Up)	EP071SG-S	SOIL	In house: Referenced to USEPA SW 846 - 8015A Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40.
PAH/Phenols (SIM)	EP075(SIM)	SOIL	In house: Referenced to USEPA SW 846 - 8270D Extracts are analysed by Capillary GC/MS in Selective Ion Mode (SIM) and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (2013) Schedule B(3) (Method 502 and 507)
TRH Volatiles/BTEX	EP080	SOIL	In house: Referenced to USEPA SW 846 - 8260B Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-House. A portion of soil is extracted with MTBE. The extract is taken to dryness, made up in mobile phase. Analysis is by LC/MSMS, ESI Negative Mode using MRM. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers.

Preparation Methods	Method	Matrix	Method Descriptions
Drying only	EN020D	SOIL	In house
Hot Block Digest for metals in soils sediments and sludges	EN69	SOIL	In house: Referenced to USEPA 200.2. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM (2013) Schedule B(3) (Method 202)

Preparation Methods	Method	Matrix	Method Descriptions
Sample Extraction for PFAS	EP231-PR	SOIL	In house
Methanolic Extraction of Soils for Purge and Trap	ORG16	SOIL	In house: Referenced to USEPA SW 846 - 5030A. 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS.
Tumbler Extraction of Solids	ORG17	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.

Receipt Detail	: MEDIUM ESKIES	No. of samples received / analysed	: 74 / 73

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Please be advised that sample "AM-BH26 0-0.1" was not received at the laboratory (denoted SNR on the scanned COC).**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- **PFAS analysis will be conducted by ALS Environmental, Sydney, NATA accreditation no. 825, Site No. 10911 (Micro site no. 14913).**
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (14 days), Solid (60 days) from date of completion of work order.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default to 15:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory for processing purposes and will be shown bracketed without a time component.

ilac-MRA NATA
Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Andrew Epps	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
Ben Felgendrejeris		Brisbane Acid Sulphate Soils, Stafford, QLD
Lana Nguyen	Senior LCMS Chemist	Sydney Organics, Smithfield, NSW
Matt Frost	Senior Organic Chemist	Brisbane Inorganics, Stafford, QLD
Matt Frost	Senior Organic Chemist	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EG005T (Total Metals): Sample EB1624685-033 shows poor matrix spike recovery due to sample heterogeneity. Confirmed by visual inspection.
- EG035T (Total Mercury): Sample EB1624685-033 shows poor spike recovery due to sample heterogeneity. Confirmed by visual inspection
- EP068 Pesticides: Sample 'AM-BH14 0.25-0.5' shows poor matrix spike recovery for 4,4/ due to matrix interference. Confirmed by re-extraction and re-analysis.
- EP068 Pesticides: High LCS recovery deemed acceptable as all associated analyte results are less than LOR.
- EP075(SIM): High LCS recovery deemed acceptable as all associated analyte results are less than LOR.
- ASS: EA037 (Rapid Field and F(ox) screening): pH F(ox) Reaction Rate: 1 - Slight; 2 - Moderate; 3 - Strong; 4 - Extreme
- EA037 ASS Field Screening: NATA accreditation does not cover performance of this service.
- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.

ALS Environmental

QUALITY CONTROL REPORT

Work Order	: **EB1624749**	Page	: 1 of 19
Client	: **GOLDER ASSOCIATES**	Laboratory	: Environmental Division Brisbane
Contact	: MS KRYSTLE-RAE BIRAM	Contact	: Carsten Emrich
Address	: P O BOX 1734 MILTON QLD, AUSTRALIA 4064	Address	: 2 Byth Street Stafford QLD Australia 4053
Telephone	: +61 07 3721 5400	Telephone	: +61 7 3243 7222
Project	: 1538021	Date Samples Received	: 14-Oct-2016
Order number	: 1538021	Date Analysis Commenced	: 18-Oct-2016
C-O-C number	: ----	Issue Date	: 25-Oct-2016
Sampler	: MORGAN MIDGLEY		
Site	: Brisbane Airport		
Quote number	: ----		
No. of samples received	: 90		
No. of samples analysed	: 85		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Andrew Epps	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
Ben Felgendrejeris		Brisbane Acid Sulphate Soils, Stafford, QLD
Lana Nguyen	Senior LCMS Chemist	Sydney Organics, Smithfield, NSW
Matt Frost	Senior Organic Chemist	Brisbane Inorganics, Stafford, QLD
Matt Frost	Senior Organic Chemist	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Spike (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EB1624749**	Page	: 1 of 13
Client	: **GOLDER ASSOCIATES**	Laboratory	: Environmental Division Brisbane
Contact	: MS KRYSTLE-RAE BIRAM	Telephone	: +61 7 3243 7222
Project	: 1538021	Date Samples Received	: 14-Oct-2016
Site	: Brisbane Airport	Issue Date	: 25-Oct-2016
Sampler	: MORGAN MIDGLEY	No. of samples received	: 90
Order number	: 1538021	No. of samples analysed	: 85

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **Laboratory Control outliers exist - please see following pages for full details.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Laboratory Control Spike (LCS) Recoveries							
EP068A: Organochlorine Pesticides (OC)	QC-620755-002	----	**Hexachlorobenzene (HCB)**	118-74-1	114 %	54-112%	**Recovery greater than upper control limit**
EP068B: Organophosphorus Pesticides (OP)	QC-620755-002	----	**Pirimphos-ethyl**	23505-41-1	131 %	70-130%	**Recovery greater than upper control limit**
EP068B: Organophosphorus Pesticides (OP)	QC-620755-002	----	**Carbophenothion**	786-19-6	126 %	57-124%	**Recovery greater than upper control limit**
EP075(SIM)B: Polynuclear Aromatic Hydrocarbons	QC-620753-002	----	**Anthracene**	120-12-7	122 %	72-115%	**Recovery greater than upper control limit**
EP075(SIM)B: Polynuclear Aromatic Hydrocarbons	QC-620753-002	----	**Fluoranthene**	206-44-0	127 %	70-116%	**Recovery greater than upper control limit**
EP075(SIM)B: Polynuclear Aromatic Hydrocarbons	QC-620753-002	----	**Chrysene**	218-01-9	125 %	66-119%	**Recovery greater than upper control limit**
Matrix Spike (MS) Recoveries							
EG005T: Total Metals by ICP-AES	EB1624685--033	Anonymous	**Arsenic**	7440-38-2	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**
EG005T: Total Metals by ICP-AES	EB1624685--033	Anonymous	**Chromium**	7440-47-3	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**
EG005T: Total Metals by ICP-AES	EB1624685--033	Anonymous	**Copper**	7440-50-8	9.19 %	70-130%	**Recovery less than lower data quality objective**
EG005T: Total Metals by ICP-AES	EB1624685--033	Anonymous	**Zinc**	7440-66-6	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**
EG035T: Total Recoverable Mercury by FIMS	EB1624685--033	Anonymous	**Mercury**	7439-97-6	139 %	70-130%	**Recovery greater than upper data quality objective**
EP068A: Organochlorine Pesticides (OC)	EB1624749--014	AM-BH14 0.25-0.5	**4.4`-DDT**	50-29-3	57.7 %	70-130%	**Recovery less than lower data quality objective**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
ASS Field Screening Analysis	* EA037	SOIL	In house: Referenced to Acid Sulfate Soils Laboratory Methods Guidelines, version 2.1 June 2004. As received samples are tested for pH field and pH fox and assessed for a reaction rating.
Moisture Content	EA055-103	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 103-105 degrees C. This method is compliant with NEPM (2013) Schedule B(3) Section 7.1 and Table 1 (14 day holding time).
Total Metals by ICP-AES	EG005T	SOIL	In house: Referenced to APHA 3120; USEPA SW 846 - 6010. Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM (2013) Schedule B(3)
Total Metals by ICP-MS - Suite R	EG020R-T	SOIL	In house: Referenced to APHA 3125; USEPA SW846 - 6020. Metals in solids are determined following an appropriate acid digestion. The ICPMS technique ionizes selected elements. Ions are passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass / charge ratios prior to measurement by a discrete dynode ion detector. This method is compliant with NEPM (2013) Schedule B(3)
Total Mercury by FIMS	EG035T	SOIL	In house: Referenced to AS 3550, APHA 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM (2013) Schedule B(3)
Pesticides by GCMS	EP068	SOIL	In house: Referenced to USEPA SW 846 - 8270D Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM (2013) Schedule B(3) (Method 504,505)
TRH - Semivolatile Fraction	EP071	SOIL	In house: Referenced to USEPA SW 846 - 8015A Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40.
TRH - Semivolatile Fraction (Silica Gel Clean Up)	EP071SG-S	SOIL	In house: Referenced to USEPA SW 846 - 8015A Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40.
PAH/Phenols (SIM)	EP075(SIM)	SOIL	In house: Referenced to USEPA SW 846 - 8270D Extracts are analysed by Capillary GC/MS in Selective Ion Mode (SIM) and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (2013) Schedule B(3) (Method 502 and 507)
TRH Volatiles/BTEX	EP080	SOIL	In house: Referenced to USEPA SW 846 - 8260B Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-House. A portion of soil is extracted with MTBE. The extract is taken to dryness, made up in mobile phase. Analysis is by LC/MSMS, ESI Negative Mode using MRM. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers.

Preparation Methods	Method	Matrix	Method Descriptions
Drying only	EN020D	SOIL	In house

Preparation Methods	Method	Matrix	Method Descriptions
Hot Block Digest for metals in soils sediments and sludges	EN69	SOIL	In house: Referenced to USEPA 200.2. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM (2013) Schedule B(3) (Method 202)
Sample Extraction for PFAS	EP231-PR	SOIL	In house
Methanolic Extraction of Soils for Purge and Trap	ORG16	SOIL	In house: Referenced to USEPA SW 846 - 5030A. 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS.
Tumbler Extraction of Solids	ORG17	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.

Site	: Brisbane Airport		
Sampler	: MORGAN MIDGLEY		

Dates

Date Samples Received	: 14-Oct-2016 4:00 PM	Issue Date	: 18-Oct-2016
Client Requested Due Date	: 21-Oct-2016	Scheduled Reporting Date	: **21-Oct-2016**

Delivery Details

Mode of Delivery	: Carrier	Security Seal	: Intact.
No. of coolers/boxes	: 3	Temperature	: 1.5, 1.2, 1.7°C
Receipt Detail	: MEDIUM ESKIES	No. of samples received / analysed	: 90 / 85

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **As only a soil jar suitable for PFAS testing was received for "AM-BH30 2.75-3" (ALS #78), pH Field and Fox (EA037) will not be tested on this sample.**
- **Samples "QAQC006" and "QAQC002" will be forwarded to Eurofins, as requested.**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- **PFAS analysis will be conducted by ALS Environmental, Sydney, NATA accreditation no. 825, Site No. 10911 (Micro site no. 14913). The estimated due date for this data is the 25/10/16.**
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (14 days), Solid (60 days) from date of completion of work order.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Please be advised that a soil jar for PFAS testing was not received for "AM-BH14 1-1.25" (ALS #17), however one was received for "AM-BH14 0.75-1" (ALS #16). PFAS testing has been assigned to ALS #16, however if testing for this is not required on this sample, please contact ALS Client Services at ALSEnviro.Brisbane@alsglobal.com , ASAP.**
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default to 15:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory for processing purposes and will be shown bracketed without a time component.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results (regarding both quality and NATA accreditation).

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Eurofins | mgt Suite B7			
Total Recoverable Hydrocarbons - 1999 NEPM Fractions	Melbourne	Oct 27, 2016	14 Day

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
4. Results are uncorrected for matrix spikes or surrogate recoveries.
5. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
6. Samples were analysed on an 'as received' basis. 7. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the Sample Receipt Advice.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per Kilogram

ug/l: micrograms per litre

ppb: Parts per billion

org/100ml: Organisms per 100 millilitres

MPN/100mL: Most Probable Number of organisms per 100 millilitres

mg/l: milligrams per litre

ppm: Parts per million

%: Percentage

NTU: Nephelometric Turbidity Units

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery
CRM	Certified Reference Material - reported as percent recovery
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands. In the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
Batch Duplicate	A second piece of analysis from a sample outside of the clients batch of samples but run within the laboratory batch of analysis.
Batch SPIKE	Spike recovery reported on a sample from outside of the clients batch of samples but run within the laboratory batch of analysis.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 50-150%-Phenols & PFASs 20-130%

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
N07	Please note:- These two PAH isomers closely co-elute using the most contemporary analytical methods and both the reported concentration (and the TEQ) apply specifically to the total of the two co-eluting PAHs
Q15	The RPD reported passes Eurofins | mgt's QC - Acceptance Criteria as defined in the Internal Quality Control Review and Glossary page of this report.

Sample Receipt Advice

Company name:	**Golder Associates Pty Ltd (Qld)**
Contact name:	Krystle-Rae Biram
Project name:	BRISBANE AIRPORT
Project ID:	1538021
COC number:	Not provided
Turn around time:	5 Day
Date/Time received:	Oct 26, 2016 9:00 AM
Eurofins | mgt reference:	**521151**

Sample information

☑ A detailed list of analytes logged into our LIMS, is included in the attached summary table.

☑ All samples have been received as described on the above COC.

☑ COC has been completed correctly.

☑ Attempt to chill was evident.

☑ Appropriately preserved sample containers have been used.

☑ All samples were received in good condition.

☑ Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.

☑ Appropriate sample containers have been used.

☒ Some samples have been subcontracted.

N/A Custody Seals intact (if used).

Contact notes

If you have any questions with respect to these samples please contact:

Ryan Gilbert on Phone : or by e.mail: RyanGilbert@eurofins.com

Results will be delivered electronically via e.mail to Krystle-Rae Biram - KBiram@golder.com.au.

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Alex Rossi	Organic Chemist	Sydney Organics, Smithfield, NSW
Greg Vogel	Laboratory Manager	Brisbane Inorganics, Stafford, QLD
Kim McCabe	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EG020-F (Dissolved Metals): LOR's have been raised for some samples due to matrix interference.

Client	: **GOLDER ASSOCIATES**	Laboratory	: Environmental Division Brisbane
Contact	: K BIRAM	Contact	: Carsten Emrich
Address	: P O BOX 1734 MILTON QLD, AUSTRALIA 4064	Address	: 2 Byth Street Stafford QLD Australia 4053
Telephone	: +61 07 3721 5400	Telephone	: +61 7 3243 7222
Project	: 1538021	Date Samples Received	: 25-Oct-2016
Order number	: 1538021	Date Analysis Commenced	: 27-Oct-2016
C-O-C number	: ----	Issue Date	: 01-Nov-2016
Sampler	: MORGAN MIDGLEY		
Site	: Brisbane Airport		
Quote number	: ----		
No. of samples received	: 12		
No. of samples analysed	: 12		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Alex Rossi	Organic Chemist	Sydney Organics, Smithfield, NSW
Greg Vogel	Laboratory Manager	Brisbane Inorganics, Stafford, QLD
Kim McCabe	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **WATER**

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Spike (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **WATER**

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EB1625464**	Page	: 1 of 8
Client	: **GOLDER ASSOCIATES**	Laboratory	: Environmental Division Brisbane
Contact	: K BIRAM	Telephone	: +61 7 3243 7222
Project	: 1538021	Date Samples Received	: 25-Oct-2016
Site	: Brisbane Airport	Issue Date	: 01-Nov-2016
Sampler	: MORGAN MIDGLEY	No. of samples received	: 12
Order number	: 1538021	No. of samples analysed	: 12

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **Analysis Holding Time Outliers exist - please see following pages for full details.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **WATER**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **WATER**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification
Analytical Methods	*Method*	*QC*	*Regular*	***Actual***	***Expected***	*Evaluation*

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
pH by PC Titrator	EA005-P	WATER	In house: Referenced to APHA 4500 H+ B. This procedure determines pH of water samples by automated ISE. This method is compliant with NEPM (2013) Schedule B(3)
Conductivity by PC Titrator	EA010-P	WATER	In house: Referenced to APHA 2510 B. This procedure determines conductivity by automated ISE. This method is compliant with NEPM (2013) Schedule B(3)
Alkalinity by PC Titrator	ED037-P	WATER	In house: Referenced to APHA 2320 B This procedure determines alkalinity by automated measurement (e.g. PC Titrate) using pH 4.5 for indicating the total alkalinity end-point. This method is compliant with NEPM (2013) Schedule B(3)
Acidity as Calcium Carbonate	ED038	WATER	In house: Referenced to APHA 2310 B Acidity is determined by titration with a standardised alkali to an end-point pH of 8.3. This method is compliant with NEPM (2013) Schedule B(3)
Sulfate (Turbidimetric) as SO4 2- by Discrete Analyser	ED041G	WATER	In house: Referenced to APHA 4500-SO4. Dissolved sulfate is determined in a 0.45um filtered sample. Sulfate ions are converted to a barium sulfate suspension in an acetic acid medium with barium chloride. Light absorbance of the BaSO4 suspension is measured by a photometer and the SO4-2 concentration is determined by comparison of the reading with a standard curve. This method is compliant with NEPM (2013) Schedule B(3)
Chloride by Discrete Analyser	ED045G	WATER	In house: Referenced to APHA 4500 Cl - G.The thiocyanate ion is liberated from mercuric thiocyanate through sequestration of mercury by the chloride ion to form non-ionised mercuric chloride.in the presence of ferric ions the librated thiocynate forms highly-coloured ferric thiocynate which is measured at 480 nm APHA 21st edition seal method 2 017-1-L april 2003
Major Cations - Dissolved	ED093F	WATER	In house: Referenced to APHA 3120 and 3125; USEPA SW 846 - 6010 and 6020; Cations are determined by either ICP-AES or ICP-MS techniques. This method is compliant with NEPM (2013) Schedule B(3) Sodium Adsorption Ratio is calculated from Ca, Mg and Na which determined by ALS in house method QWI-EN/ED093F. This method is compliant with NEPM (2013) Schedule B(3) Hardness parameters are calculated based on APHA 2340 B. This method is compliant with NEPM (2013) Schedule B(3)
Dissolved Metals by ICP-MS - Suite A	EG020A-F	WATER	In house: Referenced to APHA 3125; USEPA SW846 - 6020, ALS QWI-EN/EG020. Samples are 0.45µm filtered prior to analysis. The ICPMS technique utilizes a highly efficient argon plasma to ionize selected elements. Ions are then passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to their measurement by a discrete dynode ion detector.
Dissolved Mercury by FIMS	EG035F	WATER	In house: Referenced to AS 3550, APHA 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) Samples are 0.45µm filtered prior to analysis. FIM-AAS is an automated flameless atomic absorption technique. A bromate/bromide reagent is used to oxidise any organic mercury compounds in the filtered sample. The ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM (2013) Schedule B(3)
Ionic Balance by PCT DA and Turbi SO4 DA	EN055 - PG	WATER	In house: Referenced to APHA 1030F. This method is compliant with NEPM (2013) Schedule B(3)

Analytical Methods	Method	Matrix	Method Descriptions
Per- and Polyfluoroalkyl Substances (PFAS by LCMSMS	EP231X-LL	WATER	In-house: Analysis of fresh and saline waters by solid phase extraction followed by and LC-Electrospray-MS-MS, Negative Mode using MRM. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers.

Preparation Methods	Method	Matrix	Method Descriptions
SPE preparation for LL and saline PFCs	EP231-SPE	WATER	In house

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- **PFAS analysis will be conducted by ALS Environmental, Sydney, NATA accreditation no. 825, Site No. 10911 (Micro site no. 14913).**
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (14 days), Solid (60 days) from date of completion of work order.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

Method *Client sample ID*	Sample Container Received	Preferred Sample Container for Analysis
Dissolved Mercury by FIMS : EG035F		
QAQC300	- Clear Plastic Bottle - Natural	- Clear Plastic Bottle - Nitric Acid; Filtered
Dissolved Metals by ICP-MS - Suite A : EG020A-F		
QAQC300	- Clear Plastic Bottle - Natural	- Clear Plastic Bottle - Nitric Acid; Filtered

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default to 15:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory for processing purposes and will be shown bracketed without a time component.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results (regarding both quality and NATA accreditation).

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
4. Results are uncorrected for matrix spikes or surrogate recoveries.
5. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
6. Samples were analysed on an 'as received' basis. 7. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the Sample Receipt Advice.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per Kilogram

ug/l: micrograms per litre

ppb: Parts per billion

org/100ml: Organisms per 100 millilitres

MPN/100mL: Most Probable Number of organisms per 100 millilitres

mg/l: milligrams per litre

ppm: Parts per million

%: Percentage

NTU: Nephelometric Turbidity Units

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery
CRM	Certified Reference Material - reported as percent recovery
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands. In the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
Batch Duplicate	A second piece of analysis from a sample outside of the clients batch of samples but run within the laboratory batch of analysis.
Batch SPIKE	Spike recovery reported on a sample from outside of the clients batch of samples but run within the laboratory batch of analysis.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 50-150%-Phenols & PFASs 20-130%

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Quality Control Results

Test	Units	Result 1			Acceptance Limits	Pass Limits	Qualifying Code

Quality Control Analyte Summary Compliance

The table below is the actual occurrence of QC performed on the batch of samples within this report and as defined below

Analysis	Samples Analysed	Laboratory Duplicates Reported	Laboratory Matrix Spikes Reported	Method Blanks Reported	Laboratory Control Samples Reported
Per- and Polyfluorinated Alkyl Substances	1	1	1	1	1
Heavy Metals	1	1	1	1	1

Quality Control Parameter Frequency Compliance follows guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure April 2011, Schedule B3, Guideline on Laboratory Analysis of Potentially Contaminated Soils and US EPA SW-846 Chapter 1: 'Quality Control'.

It comprises the following when a laboratory process batch is deemed to consist of up to 20 samples that are similar in terms of matrix and test procedure, and are processed as one unit for QC purposes. If more than 20 samples are being processed, they are considered as more than one batch.

Method blank

One method blank per process batch.

Laboratory duplicate

There should be at least one duplicate per process batch, or two duplicates if the process batch exceeds 10 samples.

Laboratory control sample (LCS)

There should be at least one LCS per process batch.

Matrix spikes

There should be one matrix spike per matrix type per process batch.

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N09	Quantification of linear and branched isomers has been conducted as a single total response using the relative response factor for the corresponding linear/branched standard.

Sample Receipt Advice

Company name:	**Golder Associates Pty Ltd (Qld)**
Contact name:	Krystle-Rae Biram
Project name:	BRISBANE AIRPORT
Project ID:	1538021
COC number:	Not provided
Turn around time:	5 Day
Date/Time received:	Oct 26, 2016 9:00 AM
Eurofins | mgt reference:	**521162**

Sample information

☑ A detailed list of analytes logged into our LIMS, is included in the attached summary table.

☑ Sample Temperature of a random sample selected from the batch as recorded by Eurofins | mgt Sample Receipt : 4.3 degrees Celsius.

☑ All samples have been received as described on the above COC.

☑ COC has been completed correctly.

☑ Attempt to chill was evident.

☑ Appropriately preserved sample containers have been used.

☑ All samples were received in good condition.

☑ Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.

☑ Appropriate sample containers have been used.

☑ Sample containers for volatile analysis received with zero headspace.

☒ Some samples have been subcontracted.

N/A Custody Seals intact (if used).

Contact notes

If you have any questions with respect to these samples please contact:

Ryan Gilbert on Phone : or by e.mail: RyanGilbert@eurofins.com

Results will be delivered electronically via e.mail to Krystle-Rae Biram - KBiram@golder.com.au.

APPENDIX D

Data Validation

DATA VALIDATION SUMMARY SHEET

Project Name:	**BAC Auto-Mall Precinct**	**Project Number:**	**1538021**
Primary Laboratory:	**ALS**	**Workorder Number:**	**EB1538408, EB1538408, EB1538419 and EB16000085**
Secondary Laboratory:	**Eurofins**	**Workorder Number:**	**484067**
Date Sampled:		**Sample Medium:**	

Sample Information

Number of Primary Samples:	**Contam Investigation - 28 soil and 10 water**	**Number of Triplicate Samples:**	**2 soil**
Number of Duplicate Samples:	**2 soil and 1 water**	**Number of Other QAQC Samples:**	**0**

Documentation and Sample Handling Information

	Y/N	Comments
COC completed properly?		
All requested analysis completed?		Workorder EB1538419 Q1 sampled 18/12/2015: Sample 'QC1' is listed on the COC twice though only one sample with this name was received. It is listed both as on hold and requiring PFOS/PFOA. This sample was placed on hold.
		Due to a Laboratory Error analysis on sample EB1538408-030 (AM-BH02-2.75-3.00) could not be conducted.
		Workorder: EB160085: Dissolved metals limit of reporting raised for some samples due to
Samples received intact and chilled?	Y	
Samples analysed within appropiate holding times?	Y	
Sample volumes sufficient for QC analysis?	Y	
Are there non-NATA accredited methods used?	N	
Chromatograms supplied as appropriate?	NA	
Laboratory reports signed by authorised personnel?	Y	

QAQC Sample Information (Method Blank - MB, Rinsate Blank - RB, Field Blank - FB, Trip Blank - TB)

Type	Sample ID	Comments
MB		No MB outliers occurred.

Trip Spike Information

Analyte	Spike Concentrations	Recovery Concentration	% Recovery	Comments
				No trip spike collected.

Laboratory Control Spike (LCS) Analyses

Analyte Group	Comments
Organochlorine Pesticides	Workorder EB1538419 QC sample Hexachlorobenzene recovery greater than upper control limit.
	For all remaining samples no LCS outlier or frequency outliers occurred.

Matrix Spike (MS) Analyses

Analyte Group	Comments
Metals	Workorder EB1538419 anonymous sample for chroumium recovery less than lower data quality objective, due to sample hetrogeneity. Confirmed by visual inspection by ALS.
Metals	Workorder EB1538419 anonymous sample for zinc: MS recovery not determined, background level greater than or equal to 4x spike level.
	For all remaining samples no MS outlier or frequency outliers occurred.

Laboratory Duplicates (LD) Analyses

Analyte Group	Analyte(s)	Sample ID	Comments
Moisture			LD frequency analysis outlier.
			For all remaining samples no LD outlier or frequency outliers occurred.

Field Duplicates (FD) Analyses

Analyte Group	Primary ID	Duplicate ID	Comments
	AM-BH01 2.5 – 3.0	Q1 (soil)	All results are below LOR and a RPD could not be calculated.
	AM-BH28 2.5 – 3.0	QC1 (soil)	COC error resulted in QC1 (soil) was not analysed.
	AM-BH01	QC1(water)	All results are below LOR and a RPD could not be calculated.

Field Triplicates (FT) Analyses

Analyte Group	Primary ID	Triplicate ID	Comments
	AM-BH01 2.5 – 3.0	Q2 (soil)	All results are below LOR and a RPD could not be calculated.
	AM-BH28 2.5 – 3.0	QC-2 (soil)	All results are below LOR and a RPD could not be calculated.
	AM-BH01	Q2-water	All results are below LOR and a RPD could not be calculated.

Surrogate Compound Monitoring Analyses

Analyte Group	Analyte(s)	Comments
		No outliers occurred for surrogate compound monitoring analyses

Overall Comments

Minor non-conformances detected in matrix spike (metals) and laboratory control spike (organochlorine pesticides) are not considered to limit the use of the laboratory results.

Due to a Laboratory Error analysis on sample EB1538408-030 (AM-BH02-2.75-3.00) could not be conducted. This is a acid sulphate soil sample and not limit the results of the contamination investigation.

Analysis of one soil field duplicate was not conducted as a result of a COC error. Whilst the analysis frequency of field duplicates was not meet, it is not of concern as all results are below the laboratory limit of reporting.

This batch has been validated and is considered suitable for environmnetal interpretive use.

Note: Data validation assesses each analyte in terms of all the data validation variables and only the exceedances and outliers are reported in this form.

*When concentrations are less than the LOR for both primary and duplicate/triplicate results, no RPDs are calculated

Performed By:	**Emma Cornish**	**Checked By**	Paul Scells

Laboratory reports signed by authorised personnel?	Y	

QAQC Sample Information (Method Blank - MB, Rinsate Blank - RB, Field Blank - FB, Trip Blank - TB)

Type	Sample ID	Comments
Rinsate		All results below LOR for workorder EB1625464 sample QAQC300
MB		No value outliers exist for workorder EB1625464, 521162, EB1624749 and EB1624693

Trip Spike Information

Analyte	Spike Concentrations	Recovery Concentration	% Recovery	Comments
				No trip spike collected.

Laboratory Control Spike (LCS) Analyses

Analyte Group	Comments
Heavy Metals and Per- and Polyfluorinated Alkyl Substances (PFASs)	No outliers exist for workorder EB1625464, 521162 and EB1624693
Organochlorine Pesticides, Organophosphorus Pesticides, Polynuclear Aromatic Hydrocarbons	Outliers exist for workorder EB1624749 analyte Hexachlorobenzene (HCB), Pirimphos-ethyl, Carbophenothion, Anthracene, Fluoranthene, Chrysene failed QC

Matrix Spike (MS) Analyses

Analyte Group	Comments
Sulfate	Workorder EB1625464 anonymous sample for Sulfate: MS recovery not determined, background level greater than or equal to 4x spike level.
Perfluoroalkyl Sulfonic Acids	Workorder EB1625464 anonymous sample for Perfluorobutane sulfonic acid (PFBS), Perfluoropentane sulfonic acid (PFPeS), Perfluorohexane sulfonic acid (PFHxS) and Perfluorooctane 1763-23-1 sulfonic acid (PFOS): MS recovery not determined, background level greater than or equal to 4x spike level.
Perfluoroalkyl Carboxylic Acids	Workorder EB1625464 anonymous sample for Perfluorohexanoic acid (PFHxA): MS recovery not determined, background level greater than or equal to 4x spike level.
	For all remaining samples for workorder EB1625464 no MS outlier or frequency outliers occurred.
Total Metals & Organochlorine Pesticides	Workorder EB1624749 anonymous sample for arsenic, chromium and zinc: MS recovery not determined, background level greater than or equal to 4x spike level. Sample AM-BH14 0.25-0.5 analyte 4.4'DDT and sample anonymous, analyte mercury failed QC.
Heavy Metals and Per- and Polyfluorinated Alkyl Substances (PFASs)	No MS outlier or frequency outliers occurred for workorder 521162 and EB1624693

Laboratory Duplicates (LD) Analyses

Analyte Group	Analyte(s)	Sample ID	Comments
			For workorders EB1625464, EB1624749 and 521162 no LD outlier or frequency outliers occurred.
Total metals	Chromium	AM-BH26 0.25-0.5	For workorders EB1624693 LD outlier or frequency outliers occurred.

Field Duplicates (FD) Analyses

Analyte Group	Primary ID	Duplicate ID	Comments
Heavy Metals and Perfluorinated Compounds	AM-MW16	QAQC100	No RPD exceendances, where results are below LOR a RPD could not be calculated.
Heavy Metals and Perfluorinated Compounds	AM-BH16 0.25-0.5	QAQC001	No RPD exceendances, where results are below LOR a RPD could not be calculated.
Heavy Metals and Perfluorinated Compounds	AM-BH15 0.25-0.5	QAQC005	RPD exceeded for zinc.

Field Triplicates (FT) Analyses

Analyte Group	Primary ID	Triplicate ID	Comments
Perfluorinated Compounds	AM-MW16	QAQC200	RPD exceeded for Perfluorohexanesulfonic acid (PFHxS).
Heavy Metals	AM-BH16 0.25-0.5	QAQC002	No RPD exceendances, where results are below LOR a RPD could not be calculated.
	AM-BH15 0.25-0.5	QAQC006	No RPD exceendances, where results are below LOR a RPD could not be calculated.

Surrogate Compound Monitoring Analyses

Analyte Group	Analyte(s)	Comments
		No outliers occurred for surrogate compound monitoring analyses

Overall Comments

Minor non-conformances detected in matrix spikes (MS), laboratory control spikes (LCS) and laboratory duplicates (LD) analyses are not considered to limit the use of the laboratory results.

RPD exceedances were calculated for analysis in triplicate (QAQC200) sample when compared with the primary sample (AM-MW16) and duplicate (QAQC002) sample when compared with the primary sample AM-BH16 0.25-0.5 .

This batch has been validated and is considered suitable for environmnetal interpretive use.

Note: Data validation assesses each analyte in terms of all the data validation variables and only the exceedances and outliers are reported in this form.

*When concentrations are less than the LOR for both primary and duplicate/triplicate results, no RPDs are calculated

APPENDIX E

Important Information Relating to this Report

IMPORTANT INFORMATION RELATING TO THIS REPORT

The document ("Report") to which this page is attached and which this page forms a part of, has been issued by Golder Associates Pty Ltd ("Golder") subject to the important limitations and other qualifications set out below.

This Report constitutes or is part of services ("Services") provided by Golder to its client ("Client") under and subject to a contract between Golder and its Client ("Contract"). The contents of this page are not intended to and do not alter Golder's obligations (including any limits on those obligations) to its Client under the Contract.

This Report is provided for use solely by Golder's Client and persons acting on the Client's behalf, such as its professional advisers. Golder is responsible only to its Client for this Report. Golder has no responsibility to any other person who relies or makes decisions based upon this Report or who makes any other use of this Report. Golder accepts no responsibility for any loss or damage suffered by any person other than its Client as a result of any reliance upon any part of this Report, decisions made based upon this Report or any other use of it.

This Report has been prepared in the context of the circumstances and purposes referred to in, or derived from, the Contract and Golder accepts no responsibility for use of the Report, in whole or in part, in any other context or circumstance or for any other purpose.

The scope of Golder's Services and the period of time they relate to are determined by the Contract and are subject to restrictions and limitations set out in the Contract. If a service or other work is not expressly referred to in this Report, do not assume that it has been provided or performed. If a matter is not addressed in this Report, do not assume that any determination has been made by Golder in regards to it.

At any location relevant to the Services conditions may exist which were not detected by Golder, in particular due to the specific scope of the investigation Golder has been engaged to undertake. Conditions can only be verified at the exact location of any tests undertaken. Variations in conditions may occur between tested locations and there may be conditions which have not been revealed by the investigation and which have not therefore been taken into account in this Report.

Golder accepts no responsibility for and makes no representation as to the accuracy or completeness of the information provided to it by or on behalf of the Client or sourced from any third party. Golder has assumed that such information is correct unless otherwise stated and no responsibility is accepted by Golder for incomplete or inaccurate data supplied by its Client or any other person for whom Golder is not responsible. Golder has not taken account of matters that may have existed when the Report was prepared but which were only later disclosed to Golder.

Having regard to the matters referred to in the previous paragraphs on this page in particular, carrying out the Services has allowed Golder to form no more than an opinion as to the actual conditions at any relevant location. That opinion is necessarily constrained by the extent of the information collected by Golder or otherwise made available to Golder. Further, the passage of time may affect the accuracy, applicability or usefulness of the opinions, assessments or other information in this Report. This Report is based upon the information and other circumstances that existed and were known to Golder when the Services were performed and this Report was prepared. Golder has not considered the effect of any possible future developments including physical changes to any relevant location or changes to any laws or regulations relevant to such location.

Where permitted by the Contract, Golder may have retained subconsultants affiliated with Golder to provide some or all of the Services. However, it is Golder which remains solely responsible for the Services and there is no legal recourse against any of Golder's affiliated companies or the employees, officers or directors of any of them.

By date, or revision, the Report supersedes any prior report or other document issued by Golder dealing with any matter that is addressed in the Report.

Any uncertainty as to the extent to which this Report can be used or relied upon in any respect should be referred to Golder for clarification.

As a global, employee-owned organisation with over 50 years of experience, Golder Associates is driven by our purpose to engineer earth's development while preserving earth's integrity. We deliver solutions that help our clients achieve their sustainable development goals by providing a wide range of independent consulting, design and construction services in our specialist areas of earth, environment and energy.

APPENDICES

1.0 INTRODUCTION

Brisbane Airport Corporation Pty Ltd (BAC) commissioned Golder Associates Pty Ltd (Golder) to undertake a contamination assessment for Stage 2 of the Auto Mall Precinct project at the Brisbane Airport (see **Figure 1**). Golder has previously conducted a desktop study contamination and Acid Sulfate Soil (ASS) review of the Auto Mall Precinct for BAC (reference 1460490-002-R-Rev0, February 2015), as well as contamination and ASS investigations in the adjacent Stage 1 (reference 1538021-003-R-Rev0, August 2016 and 1538021-005-R-Rev0, February 2015). The purpose of the contamination assessment is to inform the detailed design of the proposed development for Stage 2.

Combined contamination, ASS and geotechnical investigations were completed in October 2016, based on the scope of work defined in our proposal (Golder document reference no. P1538021-003-P-Rev0 dated 9 February 2016).

This report presents the contamination assessment findings for Stage 2 of the Auto Mall Precinct ("site"). The assessment results from the geotechnical and ASS investigations for Stage 2, and a limited supplementary soil and groundwater monitoring event from 6 wells located in Stage 1 are provided in separate reports.

2.0 PROJECT DETAILS

An Auto Mall Precinct is proposed to be developed on an area between Moreton Drive, Nancy Bird Way and Airport Drive at the Brisbane Airport. Refer attached **Figure 1** for the location plan. The proposed development comprises a test track in the middle of the site, surrounded by development lots for future commercial use. Private roads are located around the perimeter of the site. An Energex substation and easement is present on the site.

At the time of writing, we understand that the site is to be developed in three stages as follows:

- Development Stage 1: Track, roads and selected development lots; lots north of the Energex easement between the track and Moreton Drive, and the Track and Nancy Bird Way.
- Development Stage 2: development lots south of the Energex easement.
- Development Stage 3: development lots north of the Energex easement between the track and Airport Drive.

Drainage channels will run along site perimeter, with invert levels as low as of RL 0.2 m AD in the western portion of the site. Site drainage channels will discharge into nearby surface water drains

The current staging plan is provided in **Appendix A**.

However, for consistency with previous works, we refer to the portion of the site north of the Energex easement as Stage 1, and the portion to the south as Stage 2. This report focusses on Stage 2 investigation results (hereinafter referred to as "the site").

3.0 SITE DESCRIPTION

The site currently has an average surface RL of about 2.4 m AD[1] and is heavily vegetated with casuarina forest and mangroves. Stage 2 of the development covers an area of approximately 500 m by 300 m.

Landers Pocket drain is the closet surface water body feature, located at least 100 m west of the project area. Surface water in Landers Pocket drain flows north-east and south-west before discharging into Kedron Brook Floodway Drain. The Kedron Brook Floodway Drain discharges into Kedron Brook. The ultimate receiving environment of surface water is Moreton Bay. Proposed surface water drains will discharge into Landers Pocket drain.

[1] Aerodrome Datum

4.0 BACKGROUND INFORMATION

Golder previously conducted a desktop assessment of ASS, groundwater and contamination for the site in 2014. The findings of this desktop assessment were reported in Golder report reference No. 1416490-002-R-Rev0.

Relevant contamination findings for Stage 2 from the desktop assessment are summarised below:

- Brisbane Airport Corporation (BAC) maintains a Contaminated Sites Register (CSR). CSR listed site 28 (black sands) is located at the southern end of the Auto Mall Precinct within the Stage 2 investigation area, on the boundary with the Stage 1 investigation area. Potential contaminants of concern associated with the black sands include heavy metals, minerals and radioactivity.
- All remaining CSR listed sites were located outside of the Auto Mall Precinct area and were considered to have a low potential to cause impact to the current development site.
- In addition to the CSR, the desktop study completed for the Auto Mall Precinct in 2015 identified a construction yard in the southern portion of Stage 2 investigation area in 2009, likely associated with the works for the construction of Moreton Drive. This potential contamination source includes the possible contaminants of concern of hydrocarbons, heavy metals and organochlorine pesticides.

It is understood that mineral sands may have been placed on site in the past. The mineral sands are likely to be sourced from the mining activities on North Stradbroke Island where rutile, zircon and ilmenite were mined (and still are). These minerals contain titanium and zirconium metals as well as associated naturally occurring radioactive materials (NORMs).

Per- and poly-fluoroalkyl substances (PFAS) are emerging contaminants of concern at airports and airfields. PFAS (including PFOS and PFOA) are associated with historical use in aqueous film forming foams (AFFF) used for firefighting. PFAS are persistent chemicals with high groundwater mobility. Known PFAS source areas at the Brisbane Airport include the fire rescue training facilities and fire stations but PFAS have been widely detected in groundwater across the airport. The nearest potential sources of PFAS comprise:

- Satellite Fire Station located about 3.9 km north of the site.
- Fire Rescue Training Area located about 4.8 km north of the site.
- Main Fire Station located about 2.3 km north east of the site.

Since the desktop study was completed, fuel storage facilities were also identified as potential PFAS sources, due to the storage of large volumes of firefighting liquids. The closest fuel facilities to the site include:

- JUHI facility along Hakea Street, located about 780 m north-east of the site
- Former JUHI facility along Lomandra Drive, located about 1.3 km south of the site.

Previous groundwater investigations for PFAS conducted on Stage 1 indicated PFAS are diffused at low levels.

As the use of PFOS and PFOA has been discontinued in AFFF, existing groundwater contamination from these source areas or incidental use elsewhere at the airport is not expected to increase over time.

No known or potential PFAS contaminating activities were identified occurring (presently or in the past) on or in the immediate vicinity of the site. However, PFAS has been widely encountered in groundwater across the airport and therefore the need for a Preliminary Investigation (under GEM-002) is considered to be triggered at this site.

Based on the desktop assessment the main contaminants of interest (COI) for the investigation site comprise the following:

- PFAS, including PFOS and PFOA, in soil and groundwater associated with historical use in AFFF used for firefighting elsewhere at the airport.
- Heavy metals, mineral and radioactivity associated with the CSR site 28
- Hydrocarbons, heavy metals and organochlorine pesticides in soil associated with the former constructions yard.

5.0 REGULATORY FRAMEWORK

The following key regulatory drivers and guidance documents have been considered and utilised in conducting this assessment:

5.1 General

- Office of Legislative Drafting Attorney-General's Department, *Airports (Environment Protection) Regulations 1997* (AEPR 1997 guidelines).
- *Queensland Water Quality Guidelines* 2009, as amended in 2013 (QWQG 2009), which provides an overarching framework for the management of waters (including groundwater) under the Environmental Protection Act 1994.
- Provisions for the assessment and management of contaminated land under the *Environmental Protection Act 1994*
- ASC *National Environment Protection (Assessment of Site Contamination) Measure 1999* as amended in 2013 (NEPM 2013). The NEPM has been recognised as the primary national guidance document for the assessment of site contamination in Australia.

5.2 Per- and Poly-fluoroalkyl Substances (PFAS)

- Australian Government Department of Infrastructure and Regional Development *Guideline for Environmental Management – PFC Management Actions Advice* (GEM-002), Version June 2015.
- *Managing PFC Contamination at Airports Interim Contamination Management Strategy and Decision Framework*, GHD, June 2015.
- *Model Operating Conditions – ERA 60 – Waste Disposal* Version 1.1, Qld EHP, 30 January 2015.
- Environmental Health Standing Committee (enHealth) of the Australian Health Protection Principal Committee, *enHealth Statement: Interim national guidance on human health reference values for per- and poly-fluoroalkyl substances for use in site investigations in Australia,* June 2016.

6.0 ASSESSMENT CRITERIA

6.1 PFAS

Current Australian guidelines, including AEPR 1997, do not include screening or acceptable levels for PFAS. GEM-002 indicates that until national standards for the management of PFAS contamination are agreed, the framework for PFAS management developed by consultancy firm GHD (2015) - *Managing PFC Contamination at Airports Interim Contamination Management Strategy and Decision Framework* - is available to airports and is intended to facilitate discussion on PFAS management at leased federal airports.

The following Interim Screening Levels (from GHD 2015) for PFAS in soil, groundwater and surface water have been adopted as Tier 1 values for the initial assessment of risk.

Table 1: Interim Screening Levels for PFAS

Exposure Scenario	PFOS	PFOA / 8:2FTS	6:2FTS	Comment
Soil				
Human health (direct contact – offsite/soil reuse)	6 mg/kg	16 mg/kg	60 mg/kg	These are residential screening levels that are protective of human health via direct contact (ingestion, dermal and dust inhalation). These levels are conservative for consideration of construction workers and general public in the airport (commercial/industrial) setting.
Human health (direct contact – onsite/construction workers)	90 mg/kg	240 mg/kg	900 mg/kg	These interim screening levels are suitable for commercial/industrial land use settings. They are protective of adult worker and the general public health via direct contact (ingestion, dermal and dust inhalation). These levels do not consider the potential for leaching to groundwater.
Ecological (terrestrial)	0.373 mg/kg	3.73 mg/kg	n/a	Screening level is a low reliability, predicted no effect concentration and should provide 95% protection of terrestrial species.
Groundwater				
Human health (drinking water only)	0.2 µg/L	0.4 µg/L	5.0 µg/L	Based on a drinking water endpoint protective of human health and do not include allowance for other exposures or effects that might arise from use or disposal of water after use.
Ecological	In most cases the assessment of ecological impact will relate to the discharge of groundwater to a nearby surface water body, and impact on the aquatic ecosystem of the surface water. In assessing risk to surface waters, consideration should be given to the flux of the chemical in groundwater and the resulting dilution that will occur in the surface water. This can then be compared to the surface water screening values.			
Surface Water				
Ecological (toxicity effects on aquatic organisms)	6.66 µg/L	2,900 µg/L	n/a	95% species protection
Human Health (consumption of fish)	0.00065 µg/L*	0.3µg/L	0.0065 µg/L	Based on consumption of fish and applies to the receiving water **after** dilution.

*It is noted that this concentration is factor of 3 times lower than the limit of reporting (LOR) available at commercial analytical laboratories in Australia, using Ultratrace® methods. The concentration is also below the reported treatment levels using current technology/methods for saline waters. On this basis, the level of dilution that may be achieved prior to discharge into waterways becomes the critical factor rather than comparison to this interim screening level.

Additionally, the Queensland government has published maximum PFAS soil concentrations for use as day cover at landfills *(Model Operating Conditions – ERA 60 – Waste Disposal* Version 1.1, Qld EHP, 30 January 2015). These have been adopted to assess, suitability of PFAS-impacted soil to be disposed of offsite.

Further guidance on acceptable PFAS levels was recently provided in *enHealth Statement: Interim national guidance on human health reference values for per- and poly-fluoroalkyl substances for use in site investigations in Australia,* prepared by the Environmental Health Standing Committee (enHealth) of the Australian Health Protection Principal Committee in June 2016.

The enHealth guidelines were also adopted as Tier 1 values for the initial assessment of risk for drinking water and surface water (recreational) exposure pathways.

Exposure Scenario	PFOS / PFHxS	PFOA	Comment
Groundwater			
Human health (drinking water)	0.5 µg/L	5 µg/L	The interim drinking water guideline values are not intended to be a guide for drinking water utility providers across Australia, but rather for use to confirm the quality of drinking water supplies potentially affected by specific instances of site contamination.
Surface Water			
Human Health (recreational)	5 µg/L	50 µg/L	Ten times the drinking water levels

6.2 Other Parameters

Airports (Environmental Protection) Regulations 1997 (AEPR – 1997) apply for airports in Australia and to all BAC land. The site is not listed as an Area of Environmental Significance at Brisbane Airport, as such results were compared with:

- Soil: Acceptable Limits for general areas (Schedule 3, Table 1 of AEPR).
- Groundwater: Accepted limits for marine Water (Schedule 2, Table 1 of AEPR).

In addition, the following guidelines derived from the *National Environment Protection (Assessment of Site Contamination) Amendment Measure 2013* (No. 1) (NEPM, 2013) Schedule B1 were also referenced as a general environmental screening tool for soil and groundwater:

- Soil: Ecological Screening Levels (ESLs) for commercial/industrial land use (coarse soil) for petroleum hydrocarbon compounds.
- Soil and groundwater: Human health exposure via vapour intrusion from volatile hydrocarbon impacts in soil (Hydrocarbon Screening Levels – HSLs). HSLs have been developed for selected petroleum compounds and fractions and are applicable to assessing human health risk via the inhalation pathway. The HSLs depend on specific soil physicochemical properties, land use scenarios, and the characteristics of building structures. They apply to different soil types, and depths below surface to greater than 8 m. For the program of works, the analytical data has been initially screened against the most conservative investigation level arising from the sand soil category.
- Soil: Health investigation Levels (HILs) for commercial/industrial land use for non-hydrocarbons.
- Soil: Ecological investigation levels (EILs) for commercial/industrial land use for non-hydrocarbons.
- Groundwater: Groundwater Investigation Levels (GILs) for marine waters, as the marine environment is the ultimate ecological receptor for groundwater.

7.0 FIELDWORK

7.1 Soil Investigation

Details of the soil investigation methodology for the contamination assessment are summarised in **Table 2** below.

Table 2: Field Activities - Drilling and Soil Sampling

Activity	Details
Drilling	Soil sampling for contamination assessment was conducted between 6 and 10 October 2016. Locations targeting potentiating contaminating activities are as follows: ▪ Broad scale site coverage for residues associated with historical use of AFFF at the airport: AM-BH10, AM-BH13 to AM-BH16, AM-BH18, AM-BH24 to AM-BH26, AM-BH29 and AM-BH30. ▪ CSR Site 28 (black sands) was targeted by locations AM-BH20 to AM-BH23, completed as part of Stage 1 investigation. The boreholes were advanced to depths of 3 m using hollow flight augers mounted on a light tracked vehicle. Borehole locations are presented in **Figure 1**. Borehole drilling was carried out under the supervision of a geotechnical engineer from Golder. Soil descriptions for the lithology encountered during drilling are presented as borehole logs in **Appendix B**.
Borehole Survey	Upon completion of intrusive investigations, selected locations were surveyed by MPA Surveyors using differential GPS for easting, northing and RL. Remaining locations and levels were inferred from the survey plan provided by BAC (received 24 November 2015).
Soil Sampling	Soil samples for contamination assessment purposes were collected at 0.25 m, 0.5 m, 1 m, 2 m and 3 m bgl.
Decontamination Procedure	Samples were collected using disposable nitrile gloves and a decontaminated hand trowel. Non-dedicated soil sampling equipment was decontaminated using Decon 90 and rinsed with potable water between sampling events.
Soil Screening	Collected soil samples were screened in the field using a photo-ionisation detector (PID) for the potential presence of volatile compounds.
Samples Preservation and Handling	Collected soil samples were placed in laboratory supplied containers. Sample containers were placed with ice, in eskies whilst on-site and in transit to the laboratory. All primary samples were sent to Australian Laboratory Services (ALS) of Brisbane under Chain of Custody (CoC) procedures. Secondary samples being the triplicate were sent to Eurofins of Brisbane under COC procedures. Laboratory documents are presented in **Appendix C**.
QA/QC	A Quality Assurance/ Quality Control (QA/QC) program was implemented for the contamination investigation which included the collection of duplicates and triplicates at the rate of a pair every 20 samples. No rinsate samples were collected.
Soil Analysis	Selected soil samples were analysed for the potential contaminants of concern identified in the desktop review: ▪ PFAS, extended suite. ▪ Total recoverable hydrocarbons (TRH) (with silica gel clean up) ▪ Benzene, toluene, ethylbenzene and xylenes (BTEX) ▪ Polycyclic aromatic hydrocarbons (PAH)

Activity	Details
	▪ Arsenic, cadmium, chromium, copper, lead, mercury, nickel and zinc (Heavy Metals) ▪ Organochlorine pesticides (OCP) ▪ Titanium and zirconium in 3 shallow soil samples where suspected black sands were noted. Laboratory analytical reports are presented **Appendix C.**

7.2 Groundwater Investigation

Details of groundwater investigation methodology are summarised in **Table 3** below.

Table 3: Field Activities - Groundwater Well Installation and Sampling

Activity	Details
Monitoring Well Installation and Construction	Four boreholes (AM-BH10, AM-BH14, AM-BH15 and AM-BH16) were converted into new groundwater monitoring wells (renamed AM-MW10, AM-MW13, AM-MW14, AM-MW15 and AM-MW16). **Figure 1** presents the new monitoring well locations. New monitoring wells were constructed using 50 mm, Class 18 PVC threaded screen and casing. Construction details for monitoring wells are presented on borehole reports in **Appendix B**.
Well Development	Following installation the new wells were developed using dedicated disposable bailers.
Well Gauging	Standing water levels (SWLs) were measured on 25 October 2016 prior to purging and sampling using a calibrated water level meter. Groundwater gauging data are presented in Section 8.2 Table 4.
Well Purging	The wells were purged prior to sampling using a low flow pump (peristaltic). Groundwater quality parameters and visual observations were recorded during purging. Purging continued until stabilisation of parameters.
Groundwater Sampling	Groundwater samples were collected directly from the pump.
Sample Preservation and Handling	Collected water samples were placed in laboratory supplied containers. Samples were placed with ice, in eskies whilst on-site and in transit to the laboratory. All samples were sent to ALS of Brisbane under Chain of Custody (CoC) procedures. Secondary samples being the triplicate were sent to Eurofins of Brisbane under COC procedures. Laboratory documents are presented in **Appendix C**.
QA/QC Samples	A QA/QC program was implemented for the contamination investigation which included the collection of duplicates and triplicates at a rate of one set every 20 samples (or less). One rinsate sample was collected as part of this investigation.
Groundwater Analysis	The groundwater samples from all wells were analysed for PFAS, extended suite using ultra trace methods and heavy metals and mercury. Laboratory analytical reports are presented in **Appendix C**.

8.0 INVESTIGATION FINDINGS

8.1 Sub-surface Conditions

Detailed information of subsurface conditions encountered at the site are described in Report of Boreholes (**Appendix B**).

A summary of typical subsurface conditions encountered is as follows:

- **Topsoil** - Generally comprising loose silty sand and sandy clay, found at most locations to depths between 0.1 to 0.3 m bgl, overlying
- **Recent Alluvium (Holocene)** – Compressible, inter-bedded sandy clays and clayey sands (Upper Holocene) from approximately 0 to 3 m bgl (target depth).

Thicker layers of fill comprising gravelly material, with various percentages of fines, were encountered at several locations (AM-BH13, AM-BH14, AM-BH18, AM-BH24, AM-BH26), to a maximum depth of 1.65 m bgl.

The PID readings (<10 ppm at all locations) are considered to be indicative of background conditions.

Layers of material possibly associated with mineral sand deposition, known to have been historically present in the site surroundings, were noted at the following locations:

- AM-BH26 at 1.75-2.0 m (black mottling in clay)
- AM-BH25 at 0.5-0.6 m bgl (black fine to coarse sand in clay)
- AM-BH15 at 0.0-0.1 m bgl (dark brown silty sand)
- AM-BH16 at 0.0-0.1 m bgl (black sand in silty clay)
- AM-BH29 at 0.0-0.1 m bgl (dark brown silty sand).

Samples at these locations were tested for the presence of NORMS using a radioactivity meter[2], but no levels higher than background were reported[3]. Furthermore, a walkover was conducted at the site measuring radioactivity levels at ground level, and no levels higher than background were reported.

No odours or staining were noted that may indicate potential contamination.

8.2 Groundwater Levels and Quality

Groundwater level measurements were recorded during groundwater monitoring on 25 October 2016 in the new groundwater monitoring wells. **Table 4** summarises the groundwater measurements for the current investigation.

Based on the measured groundwater levels, the general flow direction beneath the site is interpreted to be towards the north-east.

Table 4: Summary of Groundwater Level Observations

Well ID	Depth to Groundwater (m bgl)	Groundwater RL (m AD)
AM-MW10	1.19	1.18
AM-MW14	2.57	1.51
AM-MW15	1.90	1.24
AM-MW16	1.55	0.87

Field measurements of groundwater quality parameters are summarised in **Table 5**.

Table 5: Summary of Groundwater Quality Parameters

[2] Model Thermo Scientific *RadEye*™ suitable for characterising characterizing alpha, beta, gamma and X-ray radiation.

[3] Natural background radiation levels away from any potential source were measured at 0.09 to 0.12 μSv/h. None of the samples tested reported readings above 0.12 μSv/h.

Well ID	pH	Conductivity (mS/cm)	Redox (mV)	Dissolved Oxygen (%)	Temperature (C)
AM-MW10	6.33	45.605	100.0	1.70	20.9
AM-MW14	5.56	17.880	-40.2	1.15	21.9
AM-MW15	6.11	7.953	51.1	1.21	21.1
AM-MW16	5.71	13.241	50.8	1.73	22.4

Based on groundwater quality parameters the following is noted:

- pH levels indicate groundwater is slightly acidic at all locations
- conductivity indicates groundwater is brackish to saline at all locations
- redox potential indicates groundwater conditions are oxidising in MW10, MW15 and MW16, and reducing in MW14
- dissolved oxygen levels are generally low.

8.3 Quality Assurance and Quality Control

8.3.1.1 Field QA/QC

Sampling equipment utilised during the field investigation did not contain Teflon® to prevent false positive results for PFAS. Soil and groundwater samples analysed for PFAS were placed into laboratory-issued bottles specifically for the analysis of PFAS, and therefore free of any Teflon® liners.

Two soil duplicates and two triplicate soil samples were submitted for analysis, in compliance with the data objectives for the number of primary samples (26). One groundwater duplicate and one triplicate were analysed during the groundwater investigation, as well as one rinsate.

8.3.1.2 Data Validation

The validity of analytical data was assessed by critical review of the QA/QC sample results. This was performed in accordance with USEPA guidelines as presented in the document *National Functional Guidelines for Superfund Organic Methods Data Review*, June 2008 (USEPA, 2008).

Accuracy and precision measurements from the appropriate QA/QC check samples were compared to assess the quality of the analytical data. The primary objective of the data validation process was to ensure that the data reported are suitable to be used to achieve the investigation objectives.

On the basis of the outcome of the validation procedures employed, the overall quality of the analytical data is considered to be of an acceptable standard for interpretive use. The following are noted:

- All samples were received under the appropriate COC documentation by the primary laboratory in appropriately preserved containers. Holding time breaches were reported for pH in groundwater samples, due to the short holding time for pH. Field pH measurement was utilised instead of laboratory results. No other holding time breaches were reported.
- A review of internal QA/QC checks indicates general compliance for surrogates and method blanks. Non-conformances are reported in laboratory control spikes (OCPs and PAHs), matrix spikes (PFAS, heavy metals and OCPs) and laboratory duplicates (frequency outlier); however these are not considered to limit the use of the laboratory results.
- Soil duplicate and triplicate samples yielded acceptable repeatability for the analysed compounds, with the exception of zinc in sample AM-BH15 0.25-0.5 and duplicate QAQC500 which reported an RPD of 90%. This is likely due to the heterogeneity in the material and is considered a minor non-compliance. The highest result among primary, duplicate and triplicate was used in the assessment.

Groundwater duplicate and triplicate samples yielded acceptable repeatability for the analysed compounds, with the exception of PFHxS in sample AM-MW16 and triplicate QAQC200, which reported an RPD of 84%. The highest result among primary, duplicate and triplicate was used in the assessment.

A data validation sheet has been completed and presented in **Appendix D**. Based on the above, we consider the laboratory test results to be representative and valid for the purposes of the investigation.

8.4 Soil Analysis

Laboratory test results for soil samples analysed for PFAS are summarised in **Table 5**. **Table 6** is a summary of the soil sample results for heavy metals, TRH, BTEX, PAH and OCP.

The laboratory results on soil samples indicated:

- Concentrations of PFAS were below the laboratory reporting limit and the adopted initial screening guidelines for human health and ecological (terrestrial) assessment in the analysed samples, with the exceptions of the following:
  - AM-BH14 at 0.25-0.5 m bgl, where PFOS is reported at 0.0003 mg/kg
  - AM-BH25 at 0.25-0.5 m bgl, where PFOS is reported at 0.0020 mg/kg and PFHxS at 0.0005 mg/kg
  - QAQC001, duplicate sample of BH16 at 0.25-0.5, where PFOS is reported at 0.0004 mg/kg and PFHxS at 0.0004 mg/kg
  - QAQC005, duplicate sample of BH15 at 0.25-0.5 m bgl, where PFOS is reported at 0.0004 mg/kg
- With reference to heavy metals, no exceedances of the AEPR guidelines are noted in the samples for the compounds tested. With reference to NEPM guidelines, exceedances of the EILs[4] are noted:
  - for nickel in 2 samples (AM-BH24 at 0.25-0.5 m and AM-BH26 at 0.25-0.5 m) in the western portion of the site
  - for zinc in 2 samples (AM-BH10 at 0.25-0.5 m and AM-BH15 0.25-0.5, in duplicate QAQC005), in the western and eastern portions of the site respectively
  - however, the 95% upper confidence limit of the mean concentration (UCL) calculated for nickel and zinc for the 14 samples of shallow soils collected at the site is equal to 34.64 mg/kg and 62.36 mg/kg respectively, with the standard deviations at 23.07 mg/kg and 54.14 mg/kg respectively. No individual result exceeded 250% of the assessment guidelines, therefore no 'hot spots', as defined in the NEPM 2013, have been identified, and standard deviations are lower than 50% of the respective guidelines. Therefore, based on this statistical approach, the overall soil quality is considered to meet the EILs for heavy metals for the site. The 95% UCL calculations sheets are attached in **Appendix E**.
- Titanium and zirconium were tested in 3 shallow soil samples: the results indicate that titanium concentrations are generally elevated (>250 mg/kg) in shallow soils of AM-BH15, AM-BH16 and AM-BH29, while zirconium is reported at low levels at all the locations (<3 mg/kg). This suggests that residual amounts of either rutile or ilmenite (or both) may be present and mixed in with the surface soil.
- Concentrations of TRH, BTEX, PAH and OCP were below the respective LORs in the samples (with the exception of TRH F3 in AM-BH20 at 0.25-0.5 m, reported at 120 mg/kg). Compound concentrations in the samples were below the adopted guidelines for human health and environment assessment.

The results indicate low levels of widespread contamination by PFAS in shallow soil, in the western and eastern portions of Stage 2. As the reported levels are below the Interim Screening Levels for human health and ecological receptors, soil is considered suitable for re-use at other locations at the airport with the same contamination profile (low risk), as well as day cover at landfills licenced to accept PFAS containing soils.

[4] EILs have been calculated using conservative values for CEC, as no analysis for site specific parameters were completed, and a pH of 4, as per the most conservative result of ASS analysis for shallow soils.

Table 6: Soil Laboratory Results Summary for PFAS

							Location_Code	AM-BH10	AM-BH10	AM-BH13	AM-BH13	AM-BH14	AM-BH14	AM-BH15	AM-BH15	AM-BH16	AM-BH16	AM-BH18	AM-BH18	AM-BH24	AM-BH24

8.5 Groundwater Analysis

Laboratory test results for the groundwater samples collected from wells in Stage 2 are summarised in **Table 8**, and indicated:

- PFAS are widespread in groundwater at Stage 2, with a minimum of 3 compounds present in any well.
- PFOS concentrations in the groundwater samples are below the interim screening levels for human health (drinking water) and aquatic ecosystems protection. PFOS concentrations were above the LOR, with the exception of AM-MW15. PFOS concentrations and the LOR exceed the interim screening level for human consumption of fish.
- PFOA concentrations in groundwater samples were below interim screening levels for human health (drinking water), aquatic ecosystem protection and human consumption of fish. PFOA concentrations were above the LOR, with the exception of AM-MW15.
- 6:2 FTS and 8:2 FTS concentrations in the groundwater samples are below LOR (0.005 µg/L), hence also below interim screening levels for human health (drinking water and consumption of fish) and ecological receptors (available for 8:2 FTS only).
- No PFAS compounds are measured at concentrations above the enHealth guidelines for human health (recreational scenario) and ecological ecosystems protection.
- With reference to heavy metals, exceedances of the AEPR Marine Waters guideline and NEPM 2013 Marine Waters GILs are noted in all wells for nickel and zinc.

These results indicate that contamination management will be required if impacted groundwater is encountered and/or extracted (i.e. for dewatering) during construction works. Refer to CSM and qualitative risk assessment in **Section 9** and **Section 10** respectively.

9.0 CONCEPTUAL SITE MODEL

9.1 Developing the Conceptual Site Model (CSM)

In accordance with Schedule B2 of the NEPM 2013, a CSM has been developed for the site to assess identified contamination in relation to its current condition and planned disturbances of soil and groundwater. The essential elements of the CSM have been identified in the guidelines as the following:

- Known and potential sources of contamination and contaminants of concern including the mechanism(s) of contamination (i.e. nature of the source release into the environment).
- Potentially affected media (soil, sediment, groundwater, surface water, indoor and ambient air). This project focuses on groundwater and soil as the affected media.
- Potential and complete exposure pathways.
- Human and ecological receptors.

The above elements have been addressed in the following sections.

9.2 Contaminants of Interest

The results of the desktop assessment (Section 4) and the investigations (Section 8) identified the following contaminants of interest:

Soil	Groundwater
PFOS and/or PFHxS are present in soil, though not at concentrations exceeding any of the proposed guidelines. Nickel and zinc are reported in shallow soils in concentrations exceeding the EILs at locations in the western and eastern portions of the site; however, statistical assessment of the data indicated that the concentrations are suitable to remain on site under the current land use setting. Titanium is also present in soils along the eastern portion of the site.	PFOS detected concentrations (and the laboratory reporting limits for wells where it was not detected) exceed the interim screening level for human consumption of fish. Nickel and zinc exceed Marine Waters guidelines presented in the AEPR 1997 and NEPM 2013 (GILs) in all wells installed on site.

The low levels of PFAS, heavy metals and TRH detected in the soils at the Stage 2 investigation area of the Auto Mall precinct are not considered to represent contamination requiring management if disturbed.

The site soils are considered to be suitable for reuse at other locations at the airport, without restriction.

Low levels of PFAS inside soil may become mobilised in groundwater as a result of surcharging activities consolidating these materials below the water table. It is not expected that these impacts will be greater that the level of PFAS currently detected in groundwater.

However, the presence of heavy metals in shallow soil at concentrations exceeding NEPM 2013 ecological investigation levels will be further assessed.

PFAS and heavy metals contamination in groundwater is further considered in this CSM and Qualitative Risk Assessment.

9.3 Sources

Active or historical primary sources of PFAS were not identified at the Auto Mall Precinct site.

Low level and diffuse PFAS impacts were detected in the four groundwater investigation locations.

Heavy metals identified in soil and groundwater could potentially be associated with the historical use of the site as construction yard, but this in only inferred at this stage.

For dewatering activities at the site, the extracted groundwater represents a source of contamination that could be released to the environment if not managed properly.

9.4 Pathways for Exposure to PFAS Impacted Groundwater

The key contaminant transport pathways for impacted groundwater are:

- **Groundwater migration to surface water bodies**: localised groundwater flow beneath the site is expected to be in a westerly direction towards Landers Pocket drain, which discharges into the Kedron Brook Floodway Drain. Depending on the level of dilution and the resulting concentrations in the ultimate receiving water body, humans may be exposed to unacceptable concentrations of PFAS through the consumption of fish/aquatic species.
- **Surface water discharge of groundwater seepage entering excavations**: Currently planned construction activities include excavation of drainage channels to an invert level of RL 0.2 m AD across the site. Groundwater was recently measured at an average level of RL 1.2 m AD. It is expected that groundwater seepage will enter excavations for the drainage channels and be discharged to the existing surface drainage networks. Depending on the level of dilution and the resulting concentrations in the ultimate receiving water body, humans may be exposed to unacceptable concentrations of PFAS through the consumption of fish/aquatic species, and aquatic ecosystems to unacceptable concentrations of heavy metals.
- **Direct contact with soil**: Ecological receptors and humans (workers and airport visitors) can be exposed to the contamination if growing in, existing in or coming into contact with contaminated soil and groundwater. PFAS and metals do not readily enter humans via dermal contact, but may via ingestion. Ecological receptors are more susceptible as they are more likely to take up PFAS and metals while being immersed in the contaminated media.

9.5 Receptors

The key receptors for identified groundwater contamination at the investigation sites comprise:

- **General public**: Persons who may consume fish or other aquatic species from surface water bodies into which groundwater has been discharged (either directly through dewatering discharge or indirectly as a groundwater discharge into the receiving environment), and may access the surface water bodies for recreational use. Adjacent surface water bodies comprise:
  - An artificial surface drain will be formed on the Auto Mall Precinct site. This will connect to an existing artificial surface drain about 100 m west of the site. This drain is semi tidal and discharges into a tidal drain (the Kedron Brook Floodway Drain about 1.5 km south west of this site) and then into Kedron Brook, which ultimately drains into Moreton Bay.
- **Aquatic ecosystems**: As heavy metals are reported in concentrations exceeding guidelines for the protection of the marine waters, aquatic ecosystems are considered as potential receptors in surface water bodies into which groundwater has been discharged (either directly through dewatering discharge or indirectly as a groundwater discharge into the receiving environment). Titanium is less likely than nickel and zinc to be mobile as it is part of the crystalline structure of the minerals.

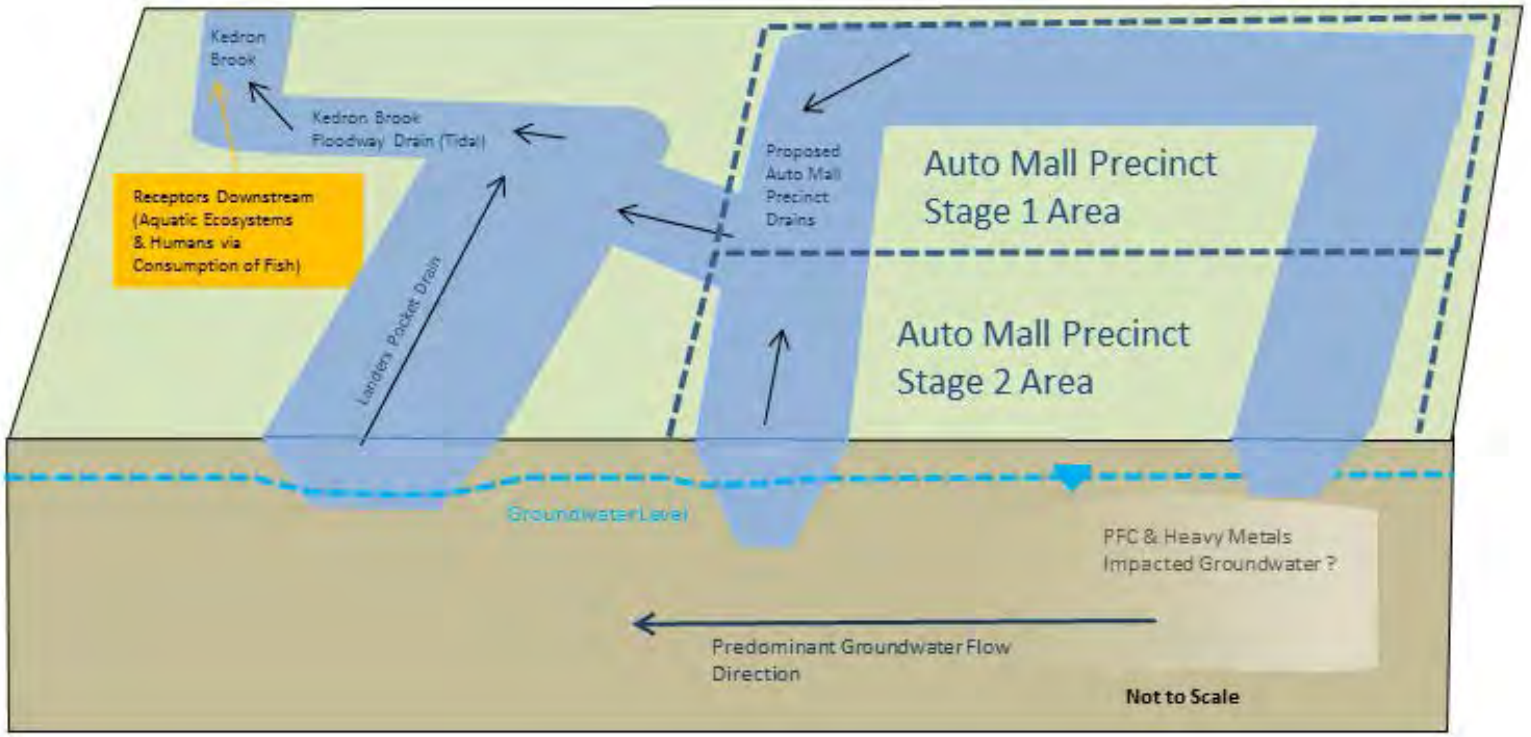
Terrestrial ecosystems are not considered to be key receptors for the PFAS contamination as concentrations reported (in the parts per billion) in the groundwater are so low that their application to soil would not result in detection (in parts per million). The presence of nickel and zinc in soil has been assessed for the site using the 95% UCL approach and the results suggest that terrestrial ecosystems, in the current, undeveloped land use setting, are not a potential receptor. Titanium in the mineral sands has low bioavailability and is considered not to pose a risk to terrestrial ecosystems.

Results of the groundwater investigation and other Golder investigations within the vicinity of the site indicate that the groundwater quality beneath the proposed development is impacted with low levels of PFAS, due to historical offsite activities, and heavy metals. No further impacts to groundwater are expected due to site contamination. Furthermore, the brackish nature of the groundwater would make it unviable as a source of potable water, and unsuitable for agriculture or other beneficial use.

Site workers who may come in direct contact with groundwater are not considered to be key receptors as the PFAS concentrations detected in all groundwater samples were well below interim screening levels for drinking water, and dermal absorption via direct contact is not a pathway for PFAS in humans.

9.6 Conceptual Site Model Schematic

A schematic of the Auto Mall Precinct CSM is shown below.



10.0 ENVIRONMENTAL RISK ASSESSMENT

10.1 Qualitative Assessment

Risk is measured as a function of the likelihood and consequence of an event occurring. This risk assessment has been completed with the consideration of source - pathway - receptors, as described in the conceptual site model above and is in general accordance with the NEPM 2013.

The qualitative risk assessment was undertaken in general accordance with AS/NZS ISO 31000:2009 Risk management - Principles and guidelines and adopting the likelihood, consequence rankings summarised below.

Qualitative Risk Assessment Rankings

Likelihood (L)	Description	Consequences (C)	Description
1) Rare	Impact is unlikely to occur within lifetime of project operations. No further management or engineering controls are required to minimise potential for occurrence	1) Low	Negligible or acceptable impact. No further management or engineering controls are required assuming no change to current conditions.
2) Low	Minor management control may need to be considered to reduce likelihood of occurrence.	2) Low to Moderate	Impact may be acceptable. Further monitoring is required to establish potential significance. Implementation of simple management controls.
3) Moderate	Impact has moderate likelihood of occurrence. Appropriate management control can result in low likelihood of occurrence.	3) Moderate	Moderate impact. Potentially acceptable if appropriate management controls are implemented.
4) High	Appropriate management control may not be sufficient to minimise likelihood and thus engineering or design solution may need to be considered.	4) Moderate to High	Impact has the potential to be unacceptable. Further monitoring may be required to establish potential significance. Implementation of appropriate management controls is required.
5) Almost Certain	Impact is believed to be inevitable or has already occurred. Management controls cannot practically minimise likelihood of occurrence to acceptable levels. Engineering or design solutions are required, if possible.	5) High	Unacceptable impact. The potential impact has a high severity and cannot necessarily be managed, should it occur.

The resulting qualitative risk ranking matrix adopted for the assessment is presented below.

Qualitative Risk Assessment Ranking Matrix

Risk Ranking (RR)	Consequences (C)				
Likelihood (L)	1) Low	2) Low to Moderate	3) Moderate	4) Moderate to High	5) High
1) Rare	1 (Low)	2 (Low)	3 (Low)	4 (Low)	5 (Moderate)
2) Low	2 (Low)	4 (Low)	6 (Moderate)	8 (Moderate)	10 (Moderate)
3) Moderate	3 (Low)	6 (Moderate)	9 (Moderate)	12 (Moderate)	15 (High)
4) High	4 (Low)	8 (Moderate)	12 (Moderate)	16 (High)	20 (High)
5) Certain	5 (Moderate)	10 (Moderate)	15 (High)	20 (High)	25 (High)

Where:

- Low Risk Ranking: Score 0 to 4. Acceptable, no specific management and/or engineering controls typically necessary.
- Moderate Risk Ranking: Score 5 to 15. Potentially acceptable subject to appropriate management and/or engineering controls.
- High Risk Ranking: Score 15 and above. Not acceptable. Engineering controls generally required, possibly in conjunction with management controls. Ranking for the source-pathway-receptor identified in the CSM are summarised below.

Risk Rankings

Receptors	Pathways	Assessment Factors	L	C	RR	Summary Item
Human Receptors						
General Public	Consumption of Fish (Groundwater migration to surface water bodies) PFAS	A dilution factor of about 32[5] would be required to reduce the highest detected groundwater PFAS concentrations below interim screening levels. A much greater dilution factor is expected for discharge of groundwater into the nearby surface water bodies	1	3	3	Low risk No further control measures
	Consumption of Fish (Groundwater seepage into proposed site drains and discharge into nearby surface water bodies) PFAS	The above considerations also apply to this pathway. It is expected that discharge of the volume of groundwater into the proposed drains alone (not including rainfall runoff) into connecting tidal drains will result in a much greater dilution factor than 32 (the dilution factor required for the highest detected groundwater PFAS concentration)..	1	3	3	Low risk No further control measures
	Consumption of Fish (Stormwater runoff and stormwater discharge into proposed site drain and into nearby surface water bodies) PFAS	Concentrations of PFAS compounds in soil are in the same order of magnitude as in groundwater (when expressed as ppb). However, the extent of soil contamination is limited to a few locations, and not as diffused as in groundwater. Therefore the magnitude of PFAS impacts from erosion and leaching to surface water and hence fish, is considered low.	3	1	3	Low risk No further control measures

[5] Calculated as the maximum concentration of any PFAS compound in groundwater divided by the corresponding Human Health Screening Level.

Receptors	Pathways	Assessment Factors	L	C	RR	Summary Item
Ecological Receptors						
Aquatic ecosystems	Toxicity effects of heavy metals (Groundwater migration to surface water bodies)	A dilution factor of about 13[6] would be required to reduce the highest detected groundwater heavy metal concentrations below the proposed guideline. A much greater dilution factor is expected for discharge of groundwater into the nearby surface water bodies	1	2	2	Low risk No further control measures
	Toxicity effects of heavy metals (Groundwater seepage into proposed site drain and discharge into nearby surface water bodies)	The above considerations also apply to this pathway. It is expected that discharge of the volume of groundwater into the proposed drains alone (not including rainfall runoff) into connecting tidal drains will result in a much greater dilution factor than 13 (the dilution factor required for the highest detected groundwater heavy metal concentration).	1	2	2	Low risk No further control measures
	Toxicity effects of heavy metals (Stormwater runoff and stormwater discharge into proposed site drain and into nearby surface water bodies)	Concentrations of heavy metals compounds in soil are 3 orders of magnitude higher than in groundwater (when expressed as ppb). However, the extent of soil contamination is limited to a few locations, and not as diffused as in groundwater. Therefore the contribution of heavy metals impacts from erosion and leaching to surface water quality degradation is considered low.	3	1	3	Low risk No further control measures

[6] Calculated as the maximum concentration of any heavy metal exceeding guidelines in groundwater divided by the corresponding exceeded guideline.

11.0 CONCLUSION AND RECOMMENDATIONS

Based on the results of the contamination assessment, the following conclusions are drawn for Stage 2 of the Auto Mall precinct.

- No TRH, BTEX, PAH and OCP concentrations above the interim screening levels were detected in any soil samples.
- With reference to PFAS, diffuse low levels are noted in shallow soil at 4 locations, in the eastern and western portions of the site, though at levels not exceeding the adopted guidelines. Where disturbed, soils from this area should be suitable for reuse at other locations at the airport without restriction. The soils may also be suitable for offsite reuse subject to more detailed sampling of excavated materials.
- With reference to heavy metals, no exceedances of the AEPR guidelines are noted in the samples for any compounds. With reference to NEPM Guidelines, exceedances of the EILs are noted for nickel and zinc at a total of 4 locations in the eastern and western portions of the site. However, the 95% UCL statistical approach applied to shallow soil throughout the whole of Stage 2 indicated that the EILs are not exceeded. Titanium concentrations also appear elevated in shallow soil along the eastern portion of the site, possibly relating to the historical placement of mineral sands.
- PFAS impacts were reported in groundwater samples in all the 4 groundwater wells analysed. PFOS concentrations and the laboratory reporting limit exceed the interim screening level for human consumption of fish.
- Heavy metals exceedances of the AEPR Marine Waters guideline and NEPM 2013 Marine Waters GILs are noted in all wells for nickel and zinc.
- With reference to Ecological Receptors:
  - Aquatic ecosystems are not considered to be key receptors, as the PFAS concentrations in groundwater are below the interim screening levels for toxicity effects on aquatic organisms. However, a residual low risk to aquatic ecosystems is represented by heavy metals concentrations in groundwater and soil.
  - Terrestrial ecosystems are not considered susceptible to the impacts of PFAS or heavy metals contamination in soil.
- With reference to Human Receptors:
  - Site workers who may come in direct contact with groundwater are not considered to be key receptors, as the PFAS concentrations detected in all groundwater samples were well below interim screening levels for drinking water.
  - All groundwater samples had PFAS concentrations exceeding the surface water interim screening level for human consumption of fish/aquatic species. The interim screening level applies to the receiving water after dilution and its use to evaluate groundwater concentration (without dilution considerations) is conservative.
  - A qualitative risk assessment for the PFAS concentrations detected in groundwater beneath this site suggests a low risk outcome for subsequent human consumption of fish/aquatic species associated with groundwater migration to the nearby and downstream surface water bodies.
  - A qualitative risk assessment of expected PFAS impacted groundwater seepage entering the proposed site drain suggests a low risk outcome for subsequent human consumption of fish/aquatic species from downstream tidal drains and waterways.

Development of a Contamination Management Plan for Stage 2 of the Auto Mall Precinct is not considered to be warranted.

12.0 IMPORTANT INFORMATION

Your attention is drawn to the document *Important Information Relating to this Report*, which is included in **Appendix F** of this report. The statements presented in that document are intended to inform a reader of the report about its proper use. There are important limitations as to who can use the report and how it can be used. It is important that a reader of the report understands and has realistic expectations about those matters. The Important Information document does not alter the obligations Golder Associates has under the contract between it and its client.

Site	: Brisbane Airport		
Quote number	: ----		
No. of samples received	: 74		
No. of samples analysed	: 73		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Alex Rossi	Organic Chemist	Sydney Organics, Smithfield, NSW
Andrew Epps	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
Ben Felgendrejeris		Brisbane Acid Sulphate Soils, Stafford, QLD
Matt Frost	Senior Organic Chemist	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EG005T (Total Metals): Sample EB1624693-002 shows poor duplicate results due to sample heterogeneity. Confirmed by visual inspection.
- ASS: EA037 (Rapid Field and F(ox) screening): pH F(ox) Reaction Rate: 1 - Slight; 2 - Moderate; 3 - Strong; 4 - Extreme
- EA037 ASS Field Screening: NATA accreditation does not cover performance of this service.
- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.

Address	: P O BOX 1734 MILTON QLD, AUSTRALIA 4064	Address	: 2 Byth Street Stafford QLD Australia 4053
Telephone	: +61 07 3721 5400	Telephone	: +61 7 3243 7222
Project	: 1538021	Date Samples Received	: 14-Oct-2016
Order number	: 1538021	Date Analysis Commenced	: 18-Oct-2016
C-O-C number	: ----	Issue Date	: 21-Oct-2016
Sampler	: MORGAN MIDGLEY		
Site	: Brisbane Airport		
Quote number	: ----		
No. of samples received	: 74		
No. of samples analysed	: 73		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Alex Rossi	Organic Chemist	Sydney Organics, Smithfield, NSW
Andrew Epps	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
Ben Felgendrejeris		Brisbane Acid Sulphate Soils, Stafford, QLD
Matt Frost	Senior Organic Chemist	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Spike (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EB1624693**	Page	: 1 of 9
Client	: **GOLDER ASSOCIATES**	Laboratory	: Environmental Division Brisbane
Contact	: MS KRYSTLE-RAE BIRAM	Telephone	: +61 7 3243 7222
Project	: 1538021	Date Samples Received	: 14-Oct-2016
Site	: Brisbane Airport	Issue Date	: 21-Oct-2016
Sampler	: MORGAN MIDGLEY	No. of samples received	: 74
Order number	: 1538021	No. of samples analysed	: 73

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **Duplicate outliers exist - please see following pages for full details.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Duplicate (DUP) RPDs							
EG005T: Total Metals by ICP-AES	EB1624693--002	AM-BH26 0.25-0.5	**Chromium**	7440-47-3	22.2 %	0% - 20%	**RPD exceeds LOR based limits**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
ASS Field Screening Analysis	* EA037	SOIL	In house: Referenced to Acid Sulfate Soils Laboratory Methods Guidelines, version 2.1 June 2004. As received samples are tested for pH field and pH fox and assessed for a reaction rating.
Moisture Content	EA055-103	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 103-105 degrees C. This method is compliant with NEPM (2013) Schedule B(3) Section 7.1 and Table 1 (14 day holding time).
Total Metals by ICP-AES	EG005T	SOIL	In house: Referenced to APHA 3120; USEPA SW 846 - 6010. Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM (2013) Schedule B(3)
Total Metals by ICP-MS - Suite R	EG020R-T	SOIL	In house: Referenced to APHA 3125; USEPA SW846 - 6020. Metals in solids are determined following an appropriate acid digestion. The ICPMS technique ionizes selected elements. Ions are passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass / charge ratios prior to measurement by a discrete dynode ion detector. This method is compliant with NEPM (2013) Schedule B(3)
Total Mercury by FIMS	EG035T	SOIL	In house: Referenced to AS 3550, APHA 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM (2013) Schedule B(3)
Pesticides by GCMS	EP068	SOIL	In house: Referenced to USEPA SW 846 - 8270D Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM (2013) Schedule B(3) (Method 504,505)
TRH - Semivolatile Fraction (Silica Gel Clean Up)	EP071SG-S	SOIL	In house: Referenced to USEPA SW 846 - 8015A Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40.
PAH/Phenols (SIM)	EP075(SIM)	SOIL	In house: Referenced to USEPA SW 846 - 8270D Extracts are analysed by Capillary GC/MS in Selective Ion Mode (SIM) and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (2013) Schedule B(3) (Method 502 and 507)
TRH Volatiles/BTEX	EP080	SOIL	In house: Referenced to USEPA SW 846 - 8260B Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-House. A portion of soil is extracted with MTBE. The extract is taken to dryness, made up in mobile phase. Analysis is by LC/MSMS, ESI Negative Mode using MRM. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers.

Preparation Methods	Method	Matrix	Method Descriptions
Drying only	EN020D	SOIL	In house
Hot Block Digest for metals in soils sediments and sludges	EN69	SOIL	In house: Referenced to USEPA 200.2. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM (2013) Schedule B(3) (Method 202)

Preparation Methods	Method	Matrix	Method Descriptions
Sample Extraction for PFAS	EP231-PR	SOIL	In house
Methanolic Extraction of Soils for Purge and Trap	ORG16	SOIL	In house: Referenced to USEPA SW 846 - 5030A. 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS.
Tumbler Extraction of Solids	ORG17	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.

Project	: 1538021	Page	: 1 of 4
Order number	: 1538021	Quote number	: ES2016GOLASS0005 (EN/002/16)
C-O-C number	: ----	QC Level	: NEPM 2013 B3 & ALS QC Standard
Site	: Brisbane Airport		
Sampler	: MORGAN MIDGLEY		

Dates

Date Samples Received	: 14-Oct-2016 4:00 PM	Issue Date	: 17-Oct-2016
Client Requested Due Date	: 21-Oct-2016	Scheduled Reporting Date	: **21-Oct-2016**

Delivery Details

Mode of Delivery	: Carrier	Security Seal	: Intact.
No. of coolers/boxes	: 3	Temperature	: 0.1°C, 0.4°C, 1.2°C
Receipt Detail	: MEDIUM ESKIES	No. of samples received / analysed	: 74 / 73

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Please be advised that sample "AM-BH26 0-0.1" was not received at the laboratory (denoted SNR on the scanned COC).**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- **PFAS analysis will be conducted by ALS Environmental, Sydney, NATA accreditation no. 825, Site No. 10911 (Micro site no. 14913).**
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (14 days), Solid (60 days) from date of completion of work order.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default to 15:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory for processing purposes and will be shown bracketed without a time component.

Matrix: **SOIL**

Project	: 1538021	Date Samples Received	: 14-Oct-2016 16:00
Order number	: 1538021	Date Analysis Commenced	: 18-Oct-2016
C-O-C number	: ----	Issue Date	: 25-Oct-2016 13:16
Sampler	: MORGAN MIDGLEY		
Site	: Brisbane Airport		
Quote number	: ----		
No. of samples received	: 90		
No. of samples analysed	: 85		

ilac-MRA NATA
Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Andrew Epps	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
Ben Felgendrejeris		Brisbane Acid Sulphate Soils, Stafford, QLD
Lana Nguyen	Senior LCMS Chemist	Sydney Organics, Smithfield, NSW
Matt Frost	Senior Organic Chemist	Brisbane Inorganics, Stafford, QLD
Matt Frost	Senior Organic Chemist	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EG005T (Total Metals): Sample EB1624685-033 shows poor matrix spike recovery due to sample heterogeneity. Confirmed by visual inspection.
- EG035T (Total Mercury): Sample EB1624685-033 shows poor spike recovery due to sample heterogeneity. Confirmed by visual inspection
- EP068 Pesticides: Sample 'AM-BH14 0.25-0.5' shows poor matrix spike recovery for 4,4/ due to matrix interference. Confirmed by re-extraction and re-analysis.
- EP068 Pesticides: High LCS recovery deemed acceptable as all associated analyte results are less than LOR.
- EP075(SIM): High LCS recovery deemed acceptable as all associated analyte results are less than LOR.
- ASS: EA037 (Rapid Field and F(ox) screening): pH F(ox) Reaction Rate: 1 - Slight; 2 - Moderate; 3 - Strong; 4 - Extreme
- EA037 ASS Field Screening: NATA accreditation does not cover performance of this service.
- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.

Contact	: MS KRYSTLE-RAE BIRAM	Contact	: Carsten Emrich
Address	: P O BOX 1734 MILTON QLD, AUSTRALIA 4064	Address	: 2 Byth Street Stafford QLD Australia 4053
Telephone	: +61 07 3721 5400	Telephone	: +61 7 3243 7222
Project	: 1538021	Date Samples Received	: 14-Oct-2016
Order number	: 1538021	Date Analysis Commenced	: 18-Oct-2016
C-O-C number	: ----	Issue Date	: 25-Oct-2016
Sampler	: MORGAN MIDGLEY		
Site	: Brisbane Airport		
Quote number	: ----		
No. of samples received	: 90		
No. of samples analysed	: 85		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Andrew Epps	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD

Matt Frost	Senior Organic Chemist	Brisbane Organics, Stafford, QLD

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Spike (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

				Method Blank (MB) Report	Laboratory Control Spike (LCS) Report

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EB1624749**	Page	: 1 of 13
Client	: **GOLDER ASSOCIATES**	Laboratory	: Environmental Division Brisbane
Contact	: MS KRYSTLE-RAE BIRAM	Telephone	: +61 7 3243 7222
Project	: 1538021	Date Samples Received	: 14-Oct-2016
Site	: Brisbane Airport	Issue Date	: 25-Oct-2016
Sampler	: MORGAN MIDGLEY	No. of samples received	: 90
Order number	: 1538021	No. of samples analysed	: 85

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **Laboratory Control outliers exist - please see following pages for full details.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Laboratory Control Spike (LCS) Recoveries							
EP068A: Organochlorine Pesticides (OC)	QC-620755-002	----	**Hexachlorobenzene (HCB)**	118-74-1	114 %	54-112%	**Recovery greater than upper control limit**
EP068B: Organophosphorus Pesticides (OP)	QC-620755-002	----	**Pirimphos-ethyl**	23505-41-1	131 %	70-130%	**Recovery greater than upper control limit**
EP068B: Organophosphorus Pesticides (OP)	QC-620755-002	----	**Carbophenothion**	786-19-6	126 %	57-124%	**Recovery greater than upper control limit**
EP075(SIM)B: Polynuclear Aromatic Hydrocarbons	QC-620753-002	----	**Anthracene**	120-12-7	122 %	72-115%	**Recovery greater than upper control limit**
EP075(SIM)B: Polynuclear Aromatic Hydrocarbons	QC-620753-002	----	**Fluoranthene**	206-44-0	127 %	70-116%	**Recovery greater than upper control limit**
EP075(SIM)B: Polynuclear Aromatic Hydrocarbons	QC-620753-002	----	**Chrysene**	218-01-9	125 %	66-119%	**Recovery greater than upper control limit**
Matrix Spike (MS) Recoveries							
EG005T: Total Metals by ICP-AES	EB1624685--033	Anonymous	**Arsenic**	7440-38-2	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**
EG005T: Total Metals by ICP-AES	EB1624685--033	Anonymous	**Chromium**	7440-47-3	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**
EG005T: Total Metals by ICP-AES	EB1624685--033	Anonymous	**Copper**	7440-50-8	9.19 %	70-130%	**Recovery less than lower data quality objective**
EG005T: Total Metals by ICP-AES	EB1624685--033	Anonymous	**Zinc**	7440-66-6	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**
EG035T: Total Recoverable Mercury by FIMS	EB1624685--033	Anonymous	**Mercury**	7439-97-6	139 %	70-130%	**Recovery greater than upper data quality objective**
EP068A: Organochlorine Pesticides (OC)	EB1624749--014	AM-BH14 0.25-0.5	**4.4`-DDT**	50-29-3	57.7 %	70-130%	**Recovery less than lower data quality objective**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
ASS Field Screening Analysis	* EA037	SOIL	In house: Referenced to Acid Sulfate Soils Laboratory Methods Guidelines, version 2.1 June 2004. As received samples are tested for pH field and pH fox and assessed for a reaction rating.
Moisture Content	EA055-103	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 103-105 degrees C. This method is compliant with NEPM (2013) Schedule B(3) Section 7.1 and Table 1 (14 day holding time).
Total Metals by ICP-AES	EG005T	SOIL	In house: Referenced to APHA 3120; USEPA SW 846 - 6010. Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM (2013) Schedule B(3)
Total Metals by ICP-MS - Suite R	EG020R-T	SOIL	In house: Referenced to APHA 3125; USEPA SW846 - 6020. Metals in solids are determined following an appropriate acid digestion. The ICPMS technique ionizes selected elements. Ions are passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass / charge ratios prior to measurement by a discrete dynode ion detector. This method is compliant with NEPM (2013) Schedule B(3)
Total Mercury by FIMS	EG035T	SOIL	In house: Referenced to AS 3550, APHA 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM (2013) Schedule B(3)
Pesticides by GCMS	EP068	SOIL	In house: Referenced to USEPA SW 846 - 8270D Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM (2013) Schedule B(3) (Method 504,505)
TRH - Semivolatile Fraction	EP071	SOIL	In house: Referenced to USEPA SW 846 - 8015A Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40.
TRH - Semivolatile Fraction (Silica Gel Clean Up)	EP071SG-S	SOIL	In house: Referenced to USEPA SW 846 - 8015A Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40.
PAH/Phenols (SIM)	EP075(SIM)	SOIL	In house: Referenced to USEPA SW 846 - 8270D Extracts are analysed by Capillary GC/MS in Selective Ion Mode (SIM) and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (2013) Schedule B(3) (Method 502 and 507)
TRH Volatiles/BTEX	EP080	SOIL	In house: Referenced to USEPA SW 846 - 8260B Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-House. A portion of soil is extracted with MTBE. The extract is taken to dryness, made up in mobile phase. Analysis is by LC/MSMS, ESI Negative Mode using MRM. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers.

Preparation Methods	Method	Matrix	Method Descriptions
Drying only	EN020D	SOIL	In house

Preparation Methods	Method	Matrix	Method Descriptions
Hot Block Digest for metals in soils sediments and sludges	EN69	SOIL	In house: Referenced to USEPA 200.2. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM (2013) Schedule B(3) (Method 202)
Sample Extraction for PFAS	EP231-PR	SOIL	In house
Methanolic Extraction of Soils for Purge and Trap	ORG16	SOIL	In house: Referenced to USEPA SW 846 - 5030A. 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS.
Tumbler Extraction of Solids	ORG17	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.

C-O-C number	: ----	QC Level	: NEPM 2013 B3 & ALS QC Standard
Site	: Brisbane Airport		
Sampler	: MORGAN MIDGLEY		

Dates

Date Samples Received	: 14-Oct-2016 4:00 PM	Issue Date	: 18-Oct-2016
Client Requested Due Date	: 21-Oct-2016	Scheduled Reporting Date	: **21-Oct-2016**

Delivery Details

Mode of Delivery	: Carrier	Security Seal	: Intact.
No. of coolers/boxes	: 3	Temperature	: 1.5, 1.2, 1.7°C
Receipt Detail	: MEDIUM ESKIES	No. of samples received / analysed	: 90 / 85

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **As only a soil jar suitable for PFAS testing was received for "AM-BH30 2.75-3" (ALS #78), pH Field and Fox (EA037) will not be tested on this sample.**
- **Samples "QAQC006" and "QAQC002" will be forwarded to Eurofins, as requested.**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- **PFAS analysis will be conducted by ALS Environmental, Sydney, NATA accreditation no. 825, Site No. 10911 (Micro site no. 14913). The estimated due date for this data is the 25/10/16.**
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (14 days), Solid (60 days) from date of completion of work order.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Please be advised that a soil jar for PFAS testing was not received for "AM-BH14 1-1.25" (ALS #17), however one was received for "AM-BH14 0.75-1" (ALS #16). PFAS testing has been assigned to ALS #16, however if testing for this is not required on this sample, please contact ALS Client Services at ALSEnviro.Brisbane@alsglobal.com , ASAP.**
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default to 15:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory for processing purposes and will be shown bracketed without a time component.

Matrix: **SOIL**

Certificate of Analysis

Golder Associates Pty Ltd
147 Coronation Dve
Milton
QLD 4064

NATA Accredited
Accreditation Number 1261
Site Number 20794

Accredited for compliance with ISO/IEC 17025 – Testing
The results of the tests, calibrations and/or measurements included in this document are traceable to Australian/national standards.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results (regarding both quality and NATA accreditation).

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Eurofins | mgt Suite B7			
Total Recoverable Hydrocarbons - 1999 NEPM Fractions	Melbourne	Oct 27, 2016	14 Day
- Method: TRH C6-C36 - LTM-ORG-2010			
BTEX	Melbourne	Oct 27, 2016	14 Day
- Method: TRH C6-C40 - LTM-ORG-2010			
Total Recoverable Hydrocarbons - 2013 NEPM Fractions	Melbourne	Oct 27, 2016	14 Day
- Method: TRH C6-C40 - LTM-ORG-2010			
Total Recoverable Hydrocarbons - 2013 NEPM Fractions	Melbourne	Oct 27, 2016	14 Day
- Method: TRH C6-C40 - LTM-ORG-2010			
Polycyclic Aromatic Hydrocarbons	Melbourne	Oct 27, 2016	14 Day
- Method: USEPA 8270 Polycyclic Aromatic Hydrocarbons			
Metals M8	Melbourne	Oct 27, 2016	28 Days
- Method: LTM-MET-3030 by ICP-OES (hydride ICP-OES for Mercury)			
Organochlorine Pesticides	Melbourne	Oct 27, 2016	14 Day
- Method: USEPA 8081 Organochlorine Pesticides			
Per- and Polyfluorinated Alkyl Substances (PFASs)	Brisbane	Oct 27, 2016	180 Day
- Method: LTM-ORG-2100 Per- and Polyfluorinated Alkyl Substances by LC-MS/MS			
% Moisture	Melbourne	Oct 26, 2016	14 Day
- Method: LTM-GEN-7080 Moisture			

Company Name: Golder Associates Pty Ltd (Qld)
Address: 147 Coronation Dve
Milton
QLD 4064

Project Name: BRISBANE AIRPORT
Project ID: 1538021

Order No.:
Report #: 521151
Phone: (07) 3721 5400
Fax: (07) 3721 5401

Received: Oct 26, 2016 9:00 AM
Due: Nov 2, 2016
Priority: 5 Day
Contact Name: Krystle-Rae Biram

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
4. Results are uncorrected for matrix spikes or surrogate recoveries.
5. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
6. Samples were analysed on an 'as received' basis. 7. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the Sample Receipt Advice.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per Kilogram

ug/l: micrograms per litre

ppb: Parts per billion

org/100ml: Organisms per 100 millilitres

MPN/100mL: Most Probable Number of organisms per 100 millilitres

mg/l: milligrams per litre

ppm: Parts per million

%: Percentage

NTU: Nephelometric Turbidity Units

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery
CRM	Certified Reference Material - reported as percent recovery
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands. In the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
Batch Duplicate	A second piece of analysis from a sample outside of the clients batch of samples but run within the laboratory batch of analysis.
Batch SPIKE	Spike recovery reported on a sample from outside of the clients batch of samples but run within the laboratory batch of analysis.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 50-150%-Phenols & PFASs 20-130%

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
N07	Please note:- These two PAH isomers closely co-elute using the most contemporary analytical methods and both the reported concentration (and the TEQ) apply specifically to the total of the two co-eluting PAHs
Q15	The RPD reported passes Eurofins | mgt's QC - Acceptance Criteria as defined in the Internal Quality Control Review and Glossary page of this report.

Date/Time received:	Oct 26, 2016 9:00 AM
Eurofins | mgt reference:	**521151**

Sample information

☑ A detailed list of analytes logged into our LIMS, is included in the attached summary table.

☑ All samples have been received as described on the above COC.

☑ COC has been completed correctly.

☑ Attempt to chill was evident.

☑ Appropriately preserved sample containers have been used.

☑ All samples were received in good condition.

☑ Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.

☑ Appropriate sample containers have been used.

☒ Some samples have been subcontracted.

N/A Custody Seals intact (if used).

Contact notes

If you have any questions with respect to these samples please contact:

Ryan Gilbert on Phone : or by e.mail: RyanGilbert@eurofins.com

Results will be delivered electronically via e.mail to Krystle-Rae Biram - KBiram@golder.com.au.

ALS Environmental

CERTIFICATE OF ANALYSIS

Work Order	: **EB1625464**	Page	: 1 of 12
Client	: **GOLDER ASSOCIATES**	Laboratory	: Environmental Division Brisbane
Contact	: K BIRAM	Contact	: Carsten Emrich
Address	: P O BOX 1734 MILTON QLD, AUSTRALIA 4064	Address	: 2 Byth Street Stafford QLD Australia 4053
Telephone	: +61 07 3721 5400	Telephone	: +61 7 3243 7222
Project	: 1538021	Date Samples Received	: 25-Oct-2016 15:15
Order number	: 1538021	Date Analysis Commenced	: 27-Oct-2016
C-O-C number	: ----	Issue Date	: 01-Nov-2016 22:12
Sampler	: MORGAN MIDGLEY		
Site	: Brisbane Airport		
Quote number	: ----		
No. of samples received	: 12		
No. of samples analysed	: 12		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Alex Rossi	Organic Chemist	Sydney Organics, Smithfield, NSW
Greg Vogel	Laboratory Manager	Brisbane Inorganics, Stafford, QLD
Kim McCabe	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EG020-F (Dissolved Metals): LOR's have been raised for some samples due to matrix interference.

Analytical Results

Client	: **GOLDER ASSOCIATES**	Laboratory	: Environmental Division Brisbane
Contact	: K BIRAM	Contact	: Carsten Emrich
Address	: P O BOX 1734 MILTON QLD, AUSTRALIA 4064	Address	: 2 Byth Street Stafford QLD Australia 4053
Telephone	: +61 07 3721 5400	Telephone	: +61 7 3243 7222
Project	: 1538021	Date Samples Received	: 25-Oct-2016
Order number	: 1538021	Date Analysis Commenced	: 27-Oct-2016
C-O-C number	: ----	Issue Date	: 01-Nov-2016
Sampler	: MORGAN MIDGLEY		
Site	: Brisbane Airport		
Quote number	: ----		
No. of samples received	: 12		
No. of samples analysed	: 12		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Alex Rossi	Organic Chemist	Sydney Organics, Smithfield, NSW
Greg Vogel	Laboratory Manager	Brisbane Inorganics, Stafford, QLD
Kim McCabe	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Spike (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **WATER**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **WATER**

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EB1625464**	Page	: 1 of 8
Client	: **GOLDER ASSOCIATES**	Laboratory	: Environmental Division Brisbane
Contact	: K BIRAM	Telephone	: +61 7 3243 7222
Project	: 1538021	Date Samples Received	: 25-Oct-2016
Site	: Brisbane Airport	Issue Date	: 01-Nov-2016
Sampler	: MORGAN MIDGLEY	No. of samples received	: 12
Order number	: 1538021	No. of samples analysed	: 12

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **Analysis Holding Time Outliers exist - please see following pages for full details.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **WATER**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
pH by PC Titrator	EA005-P	WATER	In house: Referenced to APHA 4500 H+ B. This procedure determines pH of water samples by automated ISE. This method is compliant with NEPM (2013) Schedule B(3)
Conductivity by PC Titrator	EA010-P	WATER	In house: Referenced to APHA 2510 B. This procedure determines conductivity by automated ISE. This method is compliant with NEPM (2013) Schedule B(3)
Alkalinity by PC Titrator	ED037-P	WATER	In house: Referenced to APHA 2320 B This procedure determines alkalinity by automated measurement (e.g. PC Titrate) using pH 4.5 for indicating the total alkalinity end-point. This method is compliant with NEPM (2013) Schedule B(3)
Acidity as Calcium Carbonate	ED038	WATER	In house: Referenced to APHA 2310 B Acidity is determined by titration with a standardised alkali to an end-point pH of 8.3. This method is compliant with NEPM (2013) Schedule B(3)
Sulfate (Turbidimetric) as SO4 2- by Discrete Analyser	ED041G	WATER	In house: Referenced to APHA 4500-SO4. Dissolved sulfate is determined in a 0.45um filtered sample. Sulfate ions are converted to a barium sulfate suspension in an acetic acid medium with barium chloride. Light absorbance of the BaSO4 suspension is measured by a photometer and the SO4-2 concentration is determined by comparison of the reading with a standard curve. This method is compliant with NEPM (2013) Schedule B(3)
Chloride by Discrete Analyser	ED045G	WATER	In house: Referenced to APHA 4500 Cl - G.The thiocyanate ion is liberated from mercuric thiocyanate through sequestration of mercury by the chloride ion to form non-ionised mercuric chloride.in the presence of ferric ions the librated thiocynate forms highly-coloured ferric thiocynate which is measured at 480 nm APHA 21st edition seal method 2 017-1-L april 2003
Major Cations - Dissolved	ED093F	WATER	In house: Referenced to APHA 3120 and 3125; USEPA SW 846 - 6010 and 6020; Cations are determined by either ICP-AES or ICP-MS techniques. This method is compliant with NEPM (2013) Schedule B(3) Sodium Adsorption Ratio is calculated from Ca, Mg and Na which determined by ALS in house method QWI-EN/ED093F. This method is compliant with NEPM (2013) Schedule B(3) Hardness parameters are calculated based on APHA 2340 B. This method is compliant with NEPM (2013) Schedule B(3)
Dissolved Metals by ICP-MS - Suite A	EG020A-F	WATER	In house: Referenced to APHA 3125; USEPA SW846 - 6020, ALS QWI-EN/EG020. Samples are 0.45µm filtered prior to analysis. The ICPMS technique utilizes a highly efficient argon plasma to ionize selected elements. Ions are then passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to their measurement by a discrete dynode ion detector.
Dissolved Mercury by FIMS	EG035F	WATER	In house: Referenced to AS 3550, APHA 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) Samples are 0.45µm filtered prior to analysis. FIM-AAS is an automated flameless atomic absorption technique. A bromate/bromide reagent is used to oxidise any organic mercury compounds in the filtered sample. The ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM (2013) Schedule B(3)
Ionic Balance by PCT DA and Turbi SO4 DA	EN055 - PG	WATER	In house: Referenced to APHA 1030F. This method is compliant with NEPM (2013) Schedule B(3)

Analytical Methods	Method	Matrix	Method Descriptions
Per- and Polyfluoroalkyl Substances (PFAS by LCMSMS	EP231X-LL	WATER	In-house: Analysis of fresh and saline waters by solid phase extraction followed by and LC-Electrospray-MS-MS, Negative Mode using MRM. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers.

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- **PFAS analysis will be conducted by ALS Environmental, Sydney, NATA accreditation no. 825, Site No. 10911 (Micro site no. 14913).**
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (14 days), Solid (60 days) from date of completion of work order.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

Method *Client sample ID*	Sample Container Received	Preferred Sample Container for Analysis
Dissolved Mercury by FIMS : EG035F

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default to 15:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory for processing purposes and will be shown bracketed without a time component.

Zinc	0.005	mg/L	0.12

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results (regarding both quality and NATA accreditation).

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
4. Results are uncorrected for matrix spikes or surrogate recoveries.
5. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
6. Samples were analysed on an 'as received' basis. 7. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the Sample Receipt Advice.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per Kilogram

ug/l: micrograms per litre

ppb: Parts per billion

org/100ml: Organisms per 100 millilitres

MPN/100mL: Most Probable Number of organisms per 100 millilitres

mg/l: milligrams per litre

ppm: Parts per million

%: Percentage

NTU: Nephelometric Turbidity Units

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery
CRM	Certified Reference Material - reported as percent recovery
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands. In the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
Batch Duplicate	A second piece of analysis from a sample outside of the clients batch of samples but run within the laboratory batch of analysis.
Batch SPIKE	Spike recovery reported on a sample from outside of the clients batch of samples but run within the laboratory batch of analysis.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 50-150%-Phenols & PFASs 20-130%

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Quality Control Results

Test	Units	Result 1			Acceptance Limits	Pass Limits	Qualifying Code
Method Blank							
Per- and Polyfluorinated Alkyl Substances (PFASs)							
Perfluorobutanesulfonic acid (PFBS)	mg/L	< 0.00001			0.00001	Pass

Quality Control Analyte Summary Compliance

The table below is the actual occurrence of QC performed on the batch of samples within this report and as defined below

Analysis	Samples Analysed	Laboratory Duplicates Reported	Laboratory Matrix Spikes Reported	Method Blanks Reported	Laboratory Control Samples Reported
Per- and Polyfluorinated Alkyl Substances	1	1	1	1	1
Heavy Metals	1	1	1	1	1

Quality Control Parameter Frequency Compliance follows guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure April 2011, Schedule B3, Guideline on Laboratory Analysis of Potentially Contaminated Soils and US EPA SW-846 Chapter 1: 'Quality Control'.

It comprises the following when a laboratory process batch is deemed to consist of up to 20 samples that are similar in terms of matrix and test procedure, and are processed as one unit for QC purposes. If more than 20 samples are being processed, they are considered as more than one batch.

Method blank

One method blank per process batch.

Laboratory duplicate

There should be at least one duplicate per process batch, or two duplicates if the process batch exceeds 10 samples.

Laboratory control sample (LCS)

There should be at least one LCS per process batch.

Matrix spikes

There should be one matrix spike per matrix type per process batch.

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N09	Quantification of linear and branched isomers has been conducted as a single total response using the relative response factor for the corresponding linear/branched standard.

Sample Receipt Advice

Company name:	**Golder Associates Pty Ltd (Qld)**
Contact name:	Krystle-Rae Biram
Project name:	BRISBANE AIRPORT
Project ID:	1538021
COC number:	Not provided
Turn around time:	5 Day
Date/Time received:	Oct 26, 2016 9:00 AM
Eurofins | mgt reference:	**521162**

Sample information

☑ A detailed list of analytes logged into our LIMS, is included in the attached summary table.

☑ Sample Temperature of a random sample selected from the batch as recorded by Eurofins | mgt Sample Receipt : 4.3 degrees Celsius.

☑ All samples have been received as described on the above COC.

☑ COC has been completed correctly.

☑ Attempt to chill was evident.

☑ Appropriately preserved sample containers have been used.

☑ All samples were received in good condition.

☑ Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.

☑ Appropriate sample containers have been used.

☑ Sample containers for volatile analysis received with zero headspace.

☒ Some samples have been subcontracted.

N/A Custody Seals intact (if used).

Contact notes

If you have any questions with respect to these samples please contact:

Ryan Gilbert on Phone : or by e.mail: RyanGilbert@eurofins.com

Results will be delivered electronically via e.mail to Krystle-Rae Biram - KBiram@golder.com.au.

APPENDIX D

Data Validation

DATA VALIDATION SUMMARY SHEET

Project Name:	**BAC Auto-Mall Precinct**	**Project Number:**	**1538021**
Primary Laboratory:	**ALS**	**Workorder Number:**	**EB1625464 (Water) and EB1624693 / EB1624749 (Soil)**
Secondary Laboratory:	**Eurofins**	**Workorder Number:**	**521162 (water) and 521151 (soil)**
Date Sampled:	**25/ October 2016 & 06-10 October 2016**	**Sample Medium:**	**Water and Soil**

Sample Information

Number of Primary Samples:	**10 (water) and 133 (soil)**	**Number of Triplicate Samples:**	**1 (water) & 2 (Soil)**
Number of Duplicate Samples:	**1 (water) and 2 (soil)**	**Number of Other QAQC Samples:**	**1 (rinsate)**

Documentation and Sample Handling Information

	Y/N	Comments
COC completed properly?	Y	
All requested analysis completed?	Y	
Samples received intact and chilled?	Y	
Samples analysed within appropiate holding times?	N	Holding time exceeded for workorder EB1625464 water quality parmaters samples: AM-MW31, AM-MW14, AM-MW15, AM-MW16,AM-MW10
Sample volumes sufficient for QC analysis?	Y	
Are there non-NATA accredited methods used?	N	
Chromatograms supplied as appropriate?	NA	
Laboratory reports signed by authorised personnel?	Y	

QAQC Sample Information (Method Blank - MB, Rinsate Blank - RB, Field Blank - FB, Trip Blank - TB)

Type	Sample ID	Comments
Rinsate		All results below LOR for workorder EB1625464 sample QAQC300
MB		No value outliers exist for workorder EB1625464, 521162, EB1624749 and EB1624693

Trip Spike Information

Analyte	Spike Concentrations	Recovery Concentration	% Recovery	Comments
				No trip spike collected.

Laboratory Control Spike (LCS) Analyses

Analyte Group	Comments
Heavy Metals and Per- and Polyfluorinated Alkyl Substances (PFASs)	No outliers exist for workorder EB1625464, 521162 and EB1624693
Organochlorine Pesticides, Organophosphorus Pesticides, Polynuclear Aromatic Hydrocarbons	Outliers exist for workorder EB1624749 analyte Hexachlorobenzene (HCB), Pirimphos-ethyl, Carbophenothion, Anthracene, Fluoranthene, Chrysene failed QC

Matrix Spike (MS) Analyses

Analyte Group	Comments
Sulfate	Workorder EB1625464 anonymous sample for Sulfate: MS recovery not determined, background level greater than or equal to 4x spike level.
Perfluoroalkyl Sulfonic Acids	Workorder EB1625464 anonymous sample for Perfluorobutane sulfonic acid (PFBS), Perfluoropentane sulfonic acid (PFPeS), Perfluorohexane sulfonic acid (PFHxS) and Perfluorooctane 1763-23-1 sulfonic acid (PFOS): MS recovery not determined, background level greater than or equal to 4x spike level.
Perfluoroalkyl Carboxylic Acids	Workorder EB1625464 anonymous sample for Perfluorohexanoic acid (PFHxA): MS recovery not determined, background level greater than or equal to 4x spike level.
	For all remaining samples for workorder EB1625464 no MS outlier or frequency outliers occurred.
Total Metals & Organochlorine Pesticides	Workorder EB1624749 anonymous sample for arsenic, chromium and zinc: MS recovery not determined, background level greater than or equal to 4x spike level. Sample AM-BH14 0.25-0.5 analyte 4.4'DDT and sample anonymous, analyte mercury failed QC.
Heavy Metals and Per- and Polyfluorinated Alkyl Substances (PFASs)	No MS outlier or frequency outliers occurred for workorder 521162 and EB1624693

Laboratory Duplicates (LD) Analyses

Analyte Group	Analyte(s)	Sample ID	Comments
			For workorders EB1625464, EB1624749 and 521162 no LD outlier or frequency outliers occurred.
Total metals	Chromium	AM-BH26 0.25-0.5	For workorders EB1624693 LD outlier or frequency outliers occurred.

Field Duplicates (FD) Analyses

Analyte Group	Primary ID	Duplicate ID	Comments
Heavy Metals and Perfluorinated Compounds	AM-MW16	QAQC100	No RPD exceendances, where results are below LOR a RPD could not be calculated.
Heavy Metals and Perfluorinated Compounds	AM-BH16 0.25-0.5	QAQC001	No RPD exceendances, where results are below LOR a RPD could not be calculated.
Heavy Metals and Perfluorinated Compounds	AM-BH15 0.25-0.5	QAQC005	RPD exceeded for zinc.

Field Triplicates (FT) Analyses

Analyte Group	Primary ID	Triplicate ID	Comments
Perfluorinated Compounds	AM-MW16	QAQC200	RPD exceeded for Perfluorohexanesulfonic acid (PFHxS).
Heavy Metals	AM-BH16 0.25-0.5	QAQC002	No RPD exceendances, where results are below LOR a RPD could not be calculated.
	AM-BH15 0.25-0.5	QAQC006	No RPD exceendances, where results are below LOR a RPD could not be calculated.

Surrogate Compound Monitoring Analyses

Analyte Group	Analyte(s)	Comments
		No outliers occurred for surrogate compound monitoring analyses

Overall Comments

Minor non-conformances detected in matrix spikes (MS), laboratory control spikes (LCS) and laboratory duplicates (LD) analyses are not considered to limit the use of the laboratory results.

RPD exceedances were calculated for analysis in triplicate (QAQC200) sample when compared with the primary sample (AM-MW16) and duplicate (QAQC002) sample when compared with the primary sample AM-BH16 0.25-0.5 .

This batch has been validated and is considered suitable for environmnetal interpretive use.

Note: Data validation assesses each analyte in terms of all the data validation variables and only the exceedances and outliers are reported in this form.

*When concentrations are less than the LOR for both primary and duplicate/triplicate results, no RPDs are calculated

Performed By: **Bianca Vanzati** **Checked By** **Serena Curti**
Date: **14/11/2016** **Date:** **14/11/2016**

Important Information Relating to This Report

IMPORTANT INFORMATION RELATING TO THIS REPORT

The document ("Report") to which this page is attached and which this page forms a part of, has been issued by Golder Associates Pty Ltd ("Golder") subject to the important limitations and other qualifications set out below.

This Report constitutes or is part of services ("Services") provided by Golder to its client ("Client") under and subject to a contract between Golder and its Client ("Contract"). The contents of this page are not intended to and do not alter Golder's obligations (including any limits on those obligations) to its Client under the Contract.

This Report is provided for use solely by Golder's Client and persons acting on the Client's behalf, such as its professional advisers. Golder is responsible only to its Client for this Report. Golder has no responsibility to any other person who relies or makes decisions based upon this Report or who makes any other use of this Report. Golder accepts no responsibility for any loss or damage suffered by any person other than its Client as a result of any reliance upon any part of this Report, decisions made based upon this Report or any other use of it.

This Report has been prepared in the context of the circumstances and purposes referred to in, or derived from, the Contract and Golder accepts no responsibility for use of the Report, in whole or in part, in any other context or circumstance or for any other purpose.

The scope of Golder's Services and the period of time they relate to are determined by the Contract and are subject to restrictions and limitations set out in the Contract. If a service or other work is not expressly referred to in this Report, do not assume that it has been provided or performed. If a matter is not addressed in this Report, do not assume that any determination has been made by Golder in regards to it.

At any location relevant to the Services conditions may exist which were not detected by Golder, in particular due to the specific scope of the investigation Golder has been engaged to undertake. Conditions can only be verified at the exact location of any tests undertaken. Variations in conditions may occur between tested locations and there may be conditions which have not been revealed by the investigation and which have not therefore been taken into account in this Report.

Golder accepts no responsibility for and makes no representation as to the accuracy or completeness of the information provided to it by or on behalf of the Client or sourced from any third party. Golder has assumed that such information is correct unless otherwise stated and no responsibility is accepted by Golder for incomplete or inaccurate data supplied by its Client or any other person for whom Golder is not responsible. Golder has not taken account of matters that may have existed when the Report was prepared but which were only later disclosed to Golder.

Having regard to the matters referred to in the previous paragraphs on this page in particular, carrying out the Services has allowed Golder to form no more than an opinion as to the actual conditions at any relevant location. That opinion is necessarily constrained by the extent of the information collected by Golder or otherwise made available to Golder. Further, the passage of time may affect the accuracy, applicability or usefulness of the opinions, assessments or other information in this Report. This Report is based upon the information and other circumstances that existed and were known to Golder when the Services were performed and this Report was prepared. Golder has not considered the effect of any possible future developments including physical changes to any relevant location or changes to any laws or regulations relevant to such location.

Where permitted by the Contract, Golder may have retained subconsultants affiliated with Golder to provide some or all of the Services. However, it is Golder which remains solely responsible for the Services and there is no legal recourse against any of Golder's affiliated companies or the employees, officers or directors of any of them.

By date, or revision, the Report supersedes any prior report or other document issued by Golder dealing with any matter that is addressed in the Report.

Any uncertainty as to the extent to which this Report can be used or relied upon in any respect should be referred to Golder for clarification.

As a global, employee-owned organisation with over 50 years of experience, Golder Associates is driven by our purpose to engineer earth's development while preserving earth's integrity. We deliver solutions that help our clients achieve their sustainable development goals by providing a wide range of independent consulting, design and construction services in our specialist areas of earth, environment and energy.

1.0 INTRODUCTION

This Acid Sulfate Soil Management Plan (ASSMP) has been developed by Golder Associates Pty Ltd (Golder) on request by Brisbane Airport Corporation (BAC) for earthworks and future infrastructure works associated with the proposed Auto Mall Precinct at Brisbane Airport.

The proposed Auto Mall Precinct development is situated on an area between Moreton Drive, Nancy Bird Way and Airport Drive at the Brisbane Airport in Queensland (site, **Figure 1**).

Acid Sulfate Soil (ASS) is a general term applying to both a soil horizon that contains sulfides (i.e. Potential Acid Sulfate Soil - PASS) and an acid soil horizon affected by oxidation of sulfides (i.e. Actual Acid Sulfate Soil - AASS). ASS may be peats, silts, clays, or sands.

This ASSMP references the results of ASS testing undertaken by Golder during combined groundwater, contamination and ASS investigations completed at the site in February 2015 (Golder 2015), December 2015 (Golder 2016A) and October 2016 (Golder 2016B and 2016C), which targeted assessment of materials to be excavated as part of the construction of the proposed Auto Mall Precinct development.

The Procedures contained within this ASSMP should be updated and revised to address conditions encountered that vary from those indicated by investigations or where alternative construction methodologies are adopted.

The ASSMP was prepared with consideration of the following documents:

- Office of Legislative Drafting Attorney-General's Department, *Airports (Environment Protection) Regulations 1997* (AEPR 1997 guidelines).
- *Queensland Acid Sulfate Soil Technical Manual: Soil Management Guidelines V4.0,* 2014. Dear, S-E., Ahern, C. R., O'Brien, L. E., Dobos, S. K., McElnea, A. E., Moore, N. G. & Watling, K. M. Department of Science, Information Technology, Innovation and the Arts, Queensland Government;
- *Guidelines for Sampling and Analysis of Lowland Acid Sulfate Soils in Queensland*, 1998; Ahern, CR., Ahern, M.R. and Powell;
- State Planning Policy, April 2016
- State Planning Policy – state interest guideline, Water quality April 2016
- Environmental Protection Act 1994;
- Environmental Protection Policy (Water) 2009; and
- *Queensland Water Quality Guidelines* 2009, as amended in 2013 (QWQG 2009), which provides an overarching framework for the management of waters (including groundwater) under the Environmental Protection Act 1994.

2.0 OBJECTIVES

The objective of the ASSMP is to mitigate or control potential impacts relating to the disturbance of acid sulfate soil and groundwater during earthworks.

3.0 PROJECT OVERVIEW

The proposed project site covers an area of approximately 51.3 hectares, currently heavily vegetated with casuarina forest and mangroves. The existing surface level is at approximately RL 2.4-2.5 m AD[1]. An unlined drain currently cuts the north-eastern corner of the site. An Energex electrical substation and associated cables easement cuts the site in two, as illustrated in **Figure 1**. The first phase of the project involves vegetation clearing, ground improvement works, filling and surcharge to develop the raw land.

Three land development stages are proposed as illustrated in the Staging Plan in **Appendix A** and described below:

- Development Stage 1: Track, roads and selected development lots; lots north of the Energex easement between the track and Moreton Drive, and the Track and Nancy Bird Way.
- Development Stage 2: development lots south of the Energex easement.
- Development Stage 3: development lots north of the Energex easement between the track and Airport Drive.

Excavations below the existing (predevelopment) ground surface is anticipated to be mainly limited to perimeter drains and flood storages as illustrated in the Excavated Extents Layout Plan showing areas to be excavated below 2.5m AD in **Appendix A**. It is understood the excavation of the perimeter drains and flood storage areas channel will be undertaken in stages. It is understood that tidal waters will be prevented from entering the perimeter drains by temporary bunding during the earthworks construction phase and ultimately by permanent tidal flaps installed during the future infrastructure development.

The construction works with the potential to disturb ASS include the following:

- Excavation of perimeter drains, with invert levels (IL) ranging from 0.2 m AD to 2.4 m AD.
  - Excavated materials will be ASS and will require management/treatment.
  - ASS will be exposed in the walls and base of the drains. This may will result in minor flushes of acid into perimeter drain and the subsequent stripping and mobilisation of metals.
  - The drains will intercept the water table, and may result in acid and metals impacted groundwater discharge into the drain and requiring mitigation/management.
- Surcharge with imported material, to an assumed a maximum of 9.5 m AD will consolidate soft soils underlying this site and result in settlement of existing ground surface by up to 1.5 m. Settlement will result in AASS materials being “pushed” below the current water table. This will result in the release of acid to the groundwater and the subsequent stripping and mobilisation of metals.
  - Acid and metals impacted groundwater may migrate offsite and discharge into the perimeter drains (if constructed prior to surcharging) surrounding the site. Mitigation/management of this issue will be required.
  - Acid and metals impacted groundwater is also likely to be extracted from wick drains installed under surcharged areas. Water generated by wick drains is predominantly expected to captured/stored within the overlying drainage blanket and surcharge. Water/seepage from the drainage blanket may need to be managed/treated.

However, the site will be isolated from external drains during construction.

It is understood that the rate placement of fill and surcharge materials is not expected to exceed about 1.5m per month. The groundwater monitoring regime adopted in this ASSMP is based on this expected rate of filling. This should be reviewed in higher rates of fill/surcharge placement are proposed.

[1] Aerodrome Datum

Final site levels after settlement will range from about 3.75 to 4.25 m AD.

Ultimately the project involves the construction of a multi-purpose auto hub including retail, a conference centre, hotels and other commercial areas built around a test track. Private roads will be located around the perimeter of the proposed track site.

4.0 SITE SETTINGS

4.1 Topography

The proposed site was historically a low lying plain drained by several channels. At the time of the ASS investigations in 2015 and 2016, portions of the site had been filled with dredged sand, though with a limited thickness of 0.05 to 0.7 m. The predevelopment surface levels are in the 2.4-2.5 m AD range.

4.2 Hydrology

An open drain cuts through the north-eastern corner of the site. Offsite, Landers Pocket drain is the closest surface water body feature, located about 100 m west of the project area beyond Moreton Drive.

Surface water in Landers Pocket drain flows north east for about 1 km from the site before discharging into Kedron Brook Floodway Drain, eventually discharging into Kedron Brook. The ultimate receiving environment of surface water from Kedron Brook is Moreton Bay.

Upon completion, the proposed perimeter drains will flow towards either end of the site and will result in discharges into Landers Pocket drain and subsequently Kedron Brook. During construction, these drains will be isolated from external drains.

4.3 Geology

The 1:100,000 scale Brisbane Geological map (1990) indicates that the site contains recent alluvial deposits of Holocene age of ‘undifferentiated coastal plains’, comprising mud and sand deposits. Local experience indicates that the site is underlain by Upper Holocene-age alluvia overlying Lower Holocene-age alluvia, with a relict Pleistocene alluvial land surface below. Residual soils and rock are present below the alluvia.

Holocene alluvial deposits are typically associated with ASS formation.

5.0 OVERVIEW OF EXISTING CONDITIONS

This section provides an overview of the existing acid sulfate soil conditions identified at the site during the investigations. Investigation locations are shown on attached **Figure 1**.

5.1 Groundwater Quality

Groundwater quality sampling has been conducted at fifteen monitoring well locations previously installed across the site (see **Figure 1**) to provide a 'snapshot' of the baseline groundwater conditions.

The following ground water conditions were indicated:

- Stabilised groundwater levels were measured in the completed monitoring wells ranging from 0.87 to 2.13 m AD. Based on the measured groundwater levels across the whole site, the flow direction beneath the site was interpreted to be towards the west.
- The field pH results (pH 4.30 to pH 6.99) indicated that the groundwater was acidic to near neutral. The lowest pH levels occurred in wells along the western site boundary.
- Electrical conductivity (EC) values were recorded ranging from 9 mS/cm to 51 mS/cm indicating brackish to saline water conditions;
- The buffering capacity of the wells varied across the site:
  - The groundwater at the northern end of site had very high alkalinity with a Class 1 buffering capacity (i.e. adequate to maintain acceptable pH level in the future). The central portion of site had a moderate alkalinity with a Class 3 buffering capacity (i.e. inadequate to maintain stable, acceptable pH level in areas vulnerable to acidification) apart from monitoring well BIP/MW1 on the western boundary where acidic groundwater with a Class 5 buffering capacity (i.e. unacceptable pH level under all circumstances) was encountered. The conditions at BIP/MW1 are likely to indicate historical disturbance (ASS dewatering) in this area.
  - Groundwater at the southern end of the site had a very low, Class 4 buffering capacity (i.e. inadequate to maintain stable, acceptable pH level in areas vulnerable to acidification);
- Dissolved aluminium concentrations of greater than about 1 mg/L in groundwater may be an indicator of AASS. Concentrations where above 1 mg/L at AM-MW01 (3.59 mg/L) and BIP/MW1 (8.18 mg/L), indicating active ASS impact in groundwater in those areas. These concentrations were also above the AEPR accepted limits for contamination of fresh water of 0.1 mg/L (no guidelines are available for marine water);
- Dissolved iron concentrations ranged from <0.05 to 294 mg/L;
- The Chloride to Sulfate (Cl^-: SO_4^{++}) ratios generally indicate past oxidation of PASS across the site.

Overall the groundwater results suggest a variable or historically disturbed environment.

5.2 Ground Conditions

5.2.1 General

Golder previously conducted a desktop assessment of ASS, groundwater and contamination for the future Auto Mall Precinct in 2015 (Golder 2015) and acid sulfate soil investigations for Stage 1 and Stage 2 of the future Auto Mall Precinct in 2016 (Golder 2016A, 2016B and 2016C). The findings of the desktop assessments and acid sulfate soil investigations are summarised in the following sections.

5.2.2 Subsurface conditions

Sub-surface conditions typically comprise the following:

- **Fill** – A desiccated layer of fill generally comprising loose silty sand and sandy clay, extending up to 1.0 m bgl (2.1 m AD). This layer is more predominant in the central and northern portions of the site and is absent at the southern end of site. ASS field screening and laboratory test results indicated that the fill materials are AASS.

- **Younger Alluvium (Holocene)** – This alluvium comprises variable light, medium and heavy clays and clayey sands, with some thin layers of peat and 'clean' sands. The natural soils were generally grey to dark grey and dark brown, indicative of ASS. ASS field screening and laboratory test results indicated the presence of AASS materials in alluvium from the ground surface to a depths of approximately 0.3 m AD to -0.63 m AD. PASS materials underlie this to at least the maximum depth investigated -0.68 m AD.

5.2.3 Liming Rates

Lime treatment rates have been calculated based on the 'net acidity' and are presented in **Table 1** below.

Liming rates have been calculated in kg of lime/m^3 using a factor of safety and fineness of 1.5 and an assumed bulk density of 1.8 t/m^3.

Liming rates are presented in **Table 1** for the perimeter drain alignment, and **Table 2** for the flood storages. The Drain Area naming is as per OPUS Excavated Extents Layout Plan in **Appendix A** and illustrated in Appendix B, Figure A1.

Table 1: Lime Treatment Rates – Perimeter Drains

Drain Area	Treatment Rate (Maximum)
Moreton Drive North Channel 1	150 kg lime/m^3
Moreton Drive North Channel 2	62 kg lime/m^3
Moreton Drive South Channel	14 kg lime/m^3
Nancy Bird Channel	50 kg lime/m^3
Airport Drive North Channel 1	320 kg lime/m^3
Airport Drive North Channel 2	120 kg lime/m^3
Airport Drive South Channel	19 kg lime/m^3

Table 2: Lime Treatment Rates – Flood Storages

Flood Storage Area	Treatment Rate (Maximum)
Moreton Drive Basin[2]	14 kg lime/m^3
Airport Drive Basin[2]	19 kg lime/m^3
Northern Storage Channel	120 kg lime/m^3

[2] No ASS investigation are located within the proposed basin footprints, liming rates are derived nearest section of perimeter drain. Liming rates for materials from these areas should be confirmed prior to treatment.

Lime treatment rates have been calculated based on the maximum 'net acidity' rates and include a safety factor of 1.5, these maximum treatment rates can be immediately adopted for neutralisation treatment of the appropriate materials without further laboratory testing. However, due to the significant variation observed in the range of calculated liming rates within the designated materials, further testing and characterisation of 500 m^3 "lots" of excavated material could be undertaken prior to treatment site to determine specific liming rates. This could significantly reduce the quantities of lime required for treatment.

6.0 POTENTIAL ENVIRONMENTAL IMPACTS

Potential environmental impacts associated with ASS disturbance during the bulk earthworks and future infrastructure construction phase across Stages 1 to 3 of the future Auto Mall Precinct development are summarised below in **Table 3** along with the environmental risk and management strategies to mitigate the risk.

Table 3: Potential Environmental Impacts

Activity	Issue	Risk to the Environment	Mitigation Strategies
Surcharge	Offsite migration of acid and metals impacted groundwater.	Groundwater beneath the site is generally acidic with minimal or no buffering capacity. Surcharging will result in settlement and cause displacement of existing AASS materials below the water table. This will allow additional release of acid to the groundwater. Without management, the acidic groundwater represents a moderate to high level of risk to concrete structures and a high level of risk to surface water systems (where groundwater discharges into such systems).	Staged construction of a lime cut-off trench along the western, southern and eastern boundaries prior to commencement of filling/surcharging within 50 m of the end of the installed trench until fully completed. (Suitable buffering capacity is present in groundwater along the northern boundary). Monitoring of groundwater quality near the site boundaries. Monitoring frequency based on a fill/surcharging rate of up to 1.5m vertical height per month. Isolation of drains from external discharge.
	Extraction of acidic and metals impacted groundwater by wick drains	Water generated by wick drains is predominantly expected to captured/stored within the overlying drainage blanket and surcharge. Small volumes of water may seep from the drainage blanket. Without management acidic seepage could be discharged to surface water drains may result in metals flocculation and low oxygen levels if acid is buffered in the drain. There is potentially a moderate risk to the environment if appropriate management measures are not implemented.	Placement of a 10 m wide strip of surface lime ‘guard layer’ under the perimeter of each surcharge stage prior to placement of the drainage blanket, where wick drains are installed. This is to neutralise acidic seepage resulting from wick drains. Isolation of drains from external discharge.
Excavation of the perimeter drains and flood storages (post surcharging)	Acid formation and release from excavated AASS and/or PASS	For the volume and acid generating potential of ASS to be excavated, these works fall into the Extra High Level of Treatment Category (Category XH under the Queensland ASS Management Guideline). There is a potentially high risk to the environment if appropriate management measures are not implemented.	Short term stockpiling of excavated materials to be limited outside of treatment locations for each earthworks stage. Excavated ASS materials to be managed by placed across nominated section of fill/surcharge platform and neutralised by lime treatment within 48 hours of excavation. Treatment validation testing and detailed Closure Report to be prepared.

	Discharge of acidic groundwater into constructed perimeter drains.	Release of existing acidic groundwater into excavated drains may result in metals flocculation and low oxygen levels as acid is buffered. Additionally construction of drains below the existing water table may temporarily expose *in situ* PASS resulting in minor generation of additional acid. There is a high risk to the environment if appropriate management not implemented.	Construction of the drain in stages sections to monitor and treat groundwater discharges. Incorporation of lime into the walls and base of the drain. Higher lime application rates along the western site boundary to buffer acidic groundwater. (Refer Tables 1 & 2)

6.1.1 Summary of ASS Management Requirements

Provided the proposed ASS management procedures are effectively implemented and monitored throughout the development earthworks, it is considered that there should be limited internal or external ASS environmental impacts attributable to soils with existing or potential acidity or acidic groundwater.

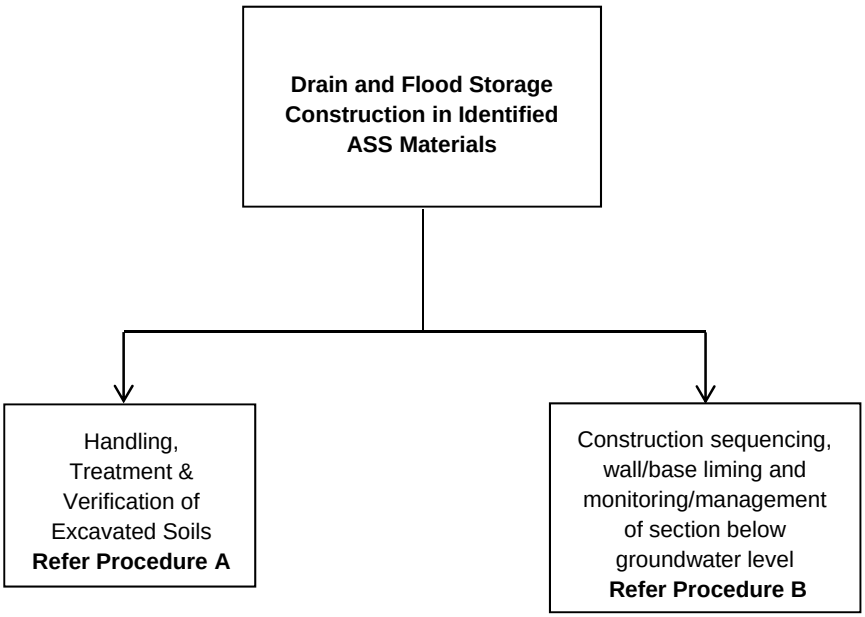
The relevant issues, which are of significance when considering existing and potential acidity management for this development, are:

- Neutralisation of excavated ASS material;
- Mobilisation of acid and/or metals from AASS into groundwater due to surcharge;
- Movement of acidic groundwater into waterways;
- Management of acidic seepage from wick drains.

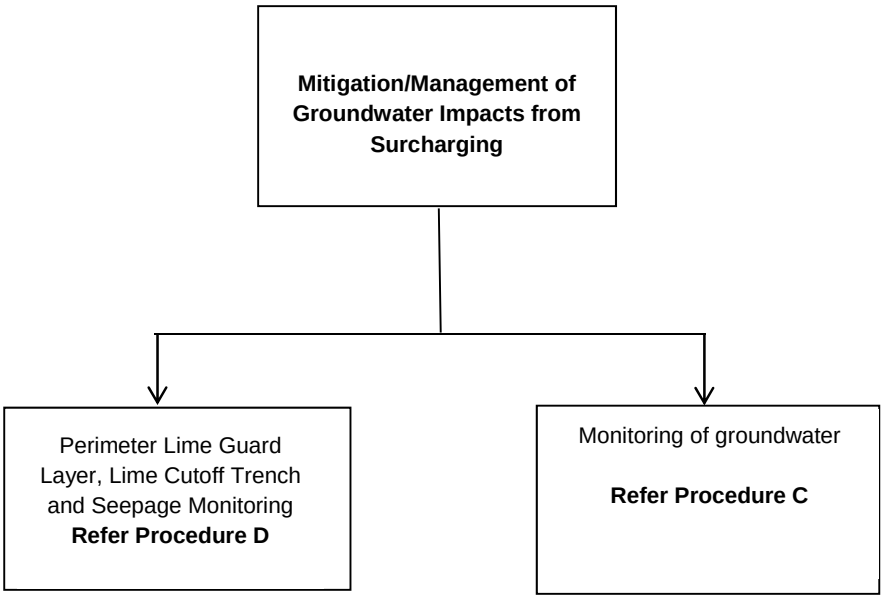
7.0 MANAGEMENT PROCEDURES

The flow chart below summarises the management of materials expected to be encountered at this site. Management Procedures are presented in **APPENDIX B**.

ASS MANAGEMENT – FLOW CHART, DRAIN AND FLOOD STORAGE EXCAVATION WORKS



ASS MANAGEMENT – FLOW CHART, SURCHARGE WORKS



The management procedures required to address the potential ASS issues associated with the bulk earthworks and future infrastructure construction works are presented in **APPENDIX B**, and comprise the following:

- **Procedure A**: Handling, treatment and verification of ASS.
- **Procedure B**: Unlined Drain/Flood Storage Area Construction.
- **Procedure C**: Groundwater Monitoring
- **Procedure D**: Fill Placement Works.

8.0 RESPONSIBILITIES

This section outlines the responsibilities to manage, document and report on ASS issues for the project.

- The *Site Manager* is responsible for ensuring that all requirements of the ASSMP are met during the project.
- The *Site Supervisor* is responsible for ensuring the strategies and procedures prescribed in the ASSMP are implemented at the site in accordance with the specified performance criteria.
- The BAC *Environmental Coordinator* is responsible for reviewing compliance with the ASSMP, to address non-conformance and approval of mitigation actions.
- All other site personnel are responsible for implementing strategies and procedures prescribed in the ASSMP, as applicable to their work activities.

9.0 NON-CONFORMANCE AND CORRECTIVE ACTION

Any non-conformance to the ASSMP must be addressed as soon as is practical. The personnel responsible for the non-conformance must be notified immediately for purposes of issuing rectification instructions.

10.0 ASSMP COMPLIANCE MONITORING

The BAC Environmental Coordinator will monitor site activities on a regular basis, as required, and advise non-conformances and approve mitigation actions.

The compliance monitoring shall take the form of visual inspections of the works and treatment locations and associated control measures and a review of monitoring data.

11.0 COMMUNITY RELATIONS

Concerns are raised by the community (or other parties) in relation to ASS will be directed to the BAC Environmental Coordinator.

The BAC Environmental Coordinator shall maintain a register recording the following information:

1) Details: Name, address and phone number of party raising the concern.
2) Nature of concern: Detail of issue, date of incident, people involved, and location.
3) Action taken or required if complaint of concern verified: Any action proposed or undertaken to address the concern, including time and date.
4) Response to action: Was the complainant satisfied with the outcome of the actions taken, if not, what else needs to be done, or is it outside the scope of the development works.
5) Prevention or re-occurrence: What action has been taken by the nominated responsible person to ensure the problem will not re-occur.

12.0 TRAINING

All site staff, either for the bulk earthwork phase or the future infrastructure phase, will be required to undergo a site induction covering elements of the ASSMP relevant to their activities. The induction will aim to instil environmental awareness in personnel and:

- Introduce and explain the duty of care required under the *Environmental Protection Act 1994.*
- Introduce the ASSMP and responsibilities it places on all contractors and consultants.
- Explain the various subordinate components of the ASSMP and the reporting and monitoring procedures of the ASSMP and how they work.
- Explain how to use the environmental procedures and plans in the ASSMP.

The content of the induction program will be endorsed and presented by the Site Manager, or delegate.

13.0 IMPORTANT INFORMATION

Your attention is drawn to the document - “Important Information Relating to this Report”, which is in **APPENDIX C** of this report. The statements presented in this document are intended to advise you of what your realistic expectations of this report should be, and to present you with recommendations on how to minimise the risks associated with the services provided for this project. The document is not intended to reduce the level of responsibility accepted by Golder Associates, but rather to ensure that all parties who may rely on this report are aware of the responsibilities each assumes in so doing.

APPENDIX B

ASS Management Procedures

A1. GENERAL

The procedures outlined below are provided for the handling and on-site treatment and verification of excavated ASS materials.

A2. OBJECTIVES

- Appropriately treat and manage excavated ASS materials so as to minimise adverse effects on the natural and built environment (including infrastructure).
- Comply with conditions of licences, permits or other approvals issued for the project.

A3. STATUTORY REQUIREMENTS AND GUIDELINES

1) *Queensland Acid Sulfate Soil Technical Manual: Soil Management Guidelines V4.0, 2014. Dear, S-E., Ahern, C. R., O'Brien, L. E., Dobos, S. K., McElnea, A. E., Moore, N. G. & Watling, K. M. Department of Science, Information Technology, Innovation and the Arts, Queensland Government;*
2) *Guidelines for Sampling and Analysis of Lowland Acid Sulfate Soils in Queensland, 1998; Ahern, CR., Ahern, M.R. and Powell;*
3) *Environmental Protection Act 1994;*
4) *Environmental Protection Policy (Water) 2009*

A4. HANDLING AND STORAGE MEASURES

A4 (a) Stockpiling of ASS

Stockpiling of excavated and untreated ASS materials outside of managed bunded areas shall not be permitted beyond:

- 18 hours for sands and clayey sands
- 24 hours for clays

Beyond these periods, untreated ASS must be stockpiled within a managed bunded area. Runoff collected in the bunded stockpile areas shall be monitored and treated where required as described as described for impounded waters in Procedure B.

A4 (b) Transport of ASS

If ASS materials excavated from below the water table are to be transported on roads external to the site, they shall be drained prior to transportation to treatment locations(s) and/or the tailgates of trucks shall be sealed to prevent spillage and leakage during transportation. The transport route between the excavation and onsite treatment locations shall be inspected on a daily basis and any spillages >0.5 m^3 shall be collected and moved to the treatment locations.

A4 (b) Materials Tracking

An ASS tracking strategy shall be developed for each earthworks stage to ensure that the origin (depth and location) of excavated ASS is identifiable at the treatment location. The materials tracking should also extend to treatment and verification requirements described in Section A5.

A5. TREATMENT MEASURES

A5 (a) Treatment Locations

Excavated ASS materials are to be treated and reused on the Project site as fill/surcharge. Treatment locations for each earthworks stage shall meet the following requirements:

- A guard layer of fine ground agricultural lime shall be applied to the treatment locations prior to placement of soils at a rate 5 kg/m^2 for each 1 m height of soil to be treated.
- Excavated ASS materials shall be placed in layers at identifiable earthworks "lots" at the treatment location and following the materials tracking plan (developed for Section A4(b)).
- The overall layer thickness shall not exceed 250 mm thickness unless effective treatment over a greater thickness can be demonstrated.
- Fine ground agricultural lime (or other approved neutralising agent) shall be applied to the surface of the placed material at the applicable rate (see Section A5(b)) using a spreader truck or other approved method. Following lime application, the lime shall be mixed into the ASS layer using mechanical methods (disc plough, rotary hoe, etc).
- Given the nature of the proposed works, verification samples shall be collected from each layer of treated material for earthworks lots of up to 500 m^3 in size or part thereof.
- Following collection of verification samples, the layer of treated material will be compacted to form part of the fill/platform. Additional layers of excavated ASS may be progressively placed, treated, verified and compacted over preceding layers.
- Where required, drying shall be enhanced by mechanical methods (rotary hoe, disc plough, etc) to create a relatively homogenous, friable material prior to addition of lime for neutralisation.

Where the planned excavation and treatment of a layer cannot be completed within a 48 hour period, the following additional measures shall apply:

- The treatment locations shall be prepared to ensure that surface runoff from untreated materials is contained on site.
- Runoff collected shall be monitored and treated where required as described for impounded waters in Procedure B.

A5 (b) Liming Rate

The ASS treatment rates based on the use of fine ground agricultural lime are presented in **Tables A5a** and **A5b** below. These treatment rates are also marked on **Figure A1.**

Table A5a: Lime Treatment Rates – Perimeter Drains

Area	Treatment Rate
Moreton Drive North Channel 1	150 kg lime/m^3
Moreton Drive North Channel 2	62 kg lime/m^3
Moreton Drive South Channel	14 kg lime/m^3
Nancy Bird Channel	50 kg lime/m^3

Airport Drive North Channel 1	320 kg lime/m^3
Airport Drive North Channel 2	120 kg lime/m^3
Airport Drive South Channel	19 kg lime/m^3

Table A5b: Lime Treatment Rates – Flood Storages

Flood Storage Area	Treatment Rate
Moreton Drive Basin[1]	14 kg lime/m^3
Airport Drive Basin[1]	19 kg lime/m^3
Northern Storage Channel	120 kg lime/m^3

Alternatively, liming rates for each treatment lot may be determined by additional sampling and Chromium Suite analysis. The liming rate required to neutralise the Net Acidity (Existing Acidity + Potential Acidity) shall be calculated by:

- Multiplying Net Acidity (calculated in kg/tonne) by a safety factor of 1.5 to allow for mixing deficiencies and poor reactivity of the lime;
- Multiplying the above result by the bulk density of the soil to arrive at the liming rate (kg/m^3).
- Multiplying the above result by 1.03 (to account for an agricultural lime neutralising value of 97%).
- Calculating surface application rate (kg/m^2) by multiplying the above result by the thickness of soil being treated.

Treatment rates for alternative neutralising agents should be determined based on a laboratory derived neutralising value.

A5 (c) Verification Testing

Verification samples shall be collected for each layer of treated material for earthworks lots of up to 500 m^3 or part thereof in size. The samples shall be formed by compositing materials from three randomly selected locations across the layer of treated soil. Samples shall be collected over the full thickness of the treated soil. Chromium Suite analysis shall be conducted on each sample to confirm net acidity by Acid Base Accounting. The result will provide ultimate confirmation that the adopted measures are satisfactory.

[1] No ASS investigation are located within the proposed basin footprints, liming rates are derived nearest section of perimeter drain. Liming rates for materials from these areas should be confirmed prior to treatment.

A6. PERFORMANCE CRITERIA

To confirm adequate lime treatment, laboratory testing must demonstrate the following:

- A neutralising capacity of more than 1.5 times the sum of existing plus potential acidity, all measured in the same units.

Some individual samples may vary from these criteria, as outlined below:

- No single sample shall exceed a net acidity of 18 mol H+/tonne (0.03% S); **and**
- If any single sample has a net acidity between 0 and 18 mol H+/tonne (0.00 to 0.03% S), then the average of any four spatially adjacent samples (including the exceeding sample) shall have an average net acidity of zero or less.

A7. CONTINGENGY MEASURES

Additional lime treatment and further verification testing shall be conducted where adequate neutralisation is not initially indicated.

A8. PERFORMANCE INDICATORS

Item	Performance Indicator
ASS tracking strategy	■ An appropriate strategy has been prepared to track the movement and treatment of ASS
ASS treatment	■ Treatment procedure employed is in accordance with Section A5
Liming rates	■ Correct liming rates are applied for each 500 m^3 of excavated materials.
Treatment verification	■ Verification of treatment on each layer for each 500 m^3 “earthworks lot”. ■ Correct verification laboratory analysis used. ■ If verification shows performance criteria in section A6 are not met, additional treatment has been employed.
Non conformance	■ All non-conformances are reported and rectified.

A9. MONITORING AND REPORTING

Records shall be kept to track excavated ASS materials, periods of stockpiling, volumes transported and placed in each treated layer and treatment rates applied.

The Site Manager shall be responsible for ensuring lime neutralisation and verification tests are completed for each layer of treated material for earthworks lots of up to 500 m^3 of excavated ASS.

The Site Manager shall maintain a register of testing results and a record of inspections.

A summary report of all test results and inspections shall be complied by the Site Manager each week and submitted to the BAC Environmental Coordinator.

PROJECT No. 1664791 | CONTROL 001 | Rev. 1 | FIGURE **A1**

Path: \\golder.gds\GAP\Brisbane\Jobs\Geo\2016\1664791 BAC-AutoMall-BNE Airport\GIS\MXD\1664791-001-Rev\B-F0A1-Proposed-Infrastructure.mxd

B1. GENERAL

The procedures outlined below are provided to manage and monitor ASS impacts associated with construction of temporary and permanent drain or flood storage areas excavations below the existing water table.

B2. OBJECTIVES

- Manage excavations to minimise the extent of insitu PASS that may be drained during excavation.
- Provide neutralising source for acidic groundwater discharge into completed drains/flood storage.
- Appropriately monitor and treat water in sections of drains/flood storage constructed below the groundwater level, prior to reconnection to existing waterways.
- Comply with conditions of licences, permits or other approvals issued for the project.

B3. STATUTORY REQUIREMENTS AND GUIDELINES

1) *Queensland Acid Sulfate Soil Technical Manual: Soil Management Guidelines V4.0, 2014. Dear, S-E., Ahern, C. R., O'Brien, L. E., Dobos, S. K., McElnea, A. E., Moore, N. G. & Watling, K. M. Department of Science, Information Technology, Innovation and the Arts, Queensland Government;*
2) Environmental Protection Act 1994;
3) Environmental Protection Policy (Water) 2009.

B4. IMPLEMENTATION MEASURES

The following procedures shall apply to permanent excavations (such as unlined drains) constructed below the existing groundwater level:

B4 (a) Drain/Flood Storage Excavations

- Excavated materials to be managed as per Procedure A.
- Conduct excavations offline of existing creeks and drains.
- For excavations below the groundwater table, limit the period of time that walls and base of excavations are exposed to air to minimize the formation of acid. Given the relatively moderate to high Net Acidity in materials below the water table, where possible program excavations in sections to be open for not more than 5 days (and preferably not more than 2.5 days) prior to allowing groundwater re-enter the completed drain.

B4 (b) Liming

- Spread fine ground agricultural lime at the following rates and kneaded into the soil surface using a small “sheepsfoot” type roller or other approved methodology:
  - Moreton Bay Drive North Channel 1 and 2
    - Eastern wall of drain from 2.5 m AD to base of drain, application rate minimum 5 kg/m^2.
    - Remainder of drain (western walls below 2.5 m AD and base), application rate minimum 2 kg/m^2.
  - Remaining Channels – Walls below 2.5 m AD and bases, application rate minimum 2 kg/m^2.

  The above areas are marked on Figure B1. This should be conducted prior allowing groundwater to re-enter the drain in sections where excavations have been conducted below the groundwater table.
- The Contractor is to provide evidence to BAC Environmental Coordinator of the installation of the minimum liming rates.

B4 (c) Groundwater Seepage into Completed Drain Sections

In drain sections where excavation has been conducted below groundwater table, the following management additional measures shall be adopted on completion of drain construction:

- pH and aluminum levels (as a minimum) are to be monitored once groundwater seepage has resulted in a stable water level in the completed section of drain. Where this impounded water is found to have a pH of less than 6.0, the excavation is to be drained following pH adjustment/treatment of impounded water and additional lime added to base and walls. Water levels in the drain will again be allowed to stabilse and further monitoring is to be conducted. Where pH remains below 6, additional mitigation measures (such as lime trenches) are to be assessed and implemented.
- Any impounded waters to be removed from the completed drain must be disposed of to land surface or soakage area within the proposed Auto Mall precinct.
- Where treatment of water in drains causes metals to flocculate, this precipitate is to be removed from the drain prior to allowing groundwater to re-enter the drain. Precipitated metals must be disposed of at a licensed landfill.
- pH adjustment/treatment of impounded waters must be carried out prior to release/reconnection to existing waterways.

Performance indicators and response actions for groundwater seepage into completed drain sections are listed in Table B5a.

It is noted that the site is to be isolated from external drains during earth works construction.

B4 (d) Rain Event Monitoring During Construction

Following rain events of more than 20mm, temporary perimeter drains shall be inspected on the next business day. Where surface water is observed, the following management measures will be adopted:

- pH will be measured in each area where surface water is observed. Where this water is found to have a pH of less than 6.0, the pH will be adjusted by addition of hydrated lime, liquid caustic (or other approved neutralizing agent) to achieve a pH of between 6.5 and 8.5.
- pH adjustment/treatment of waters within temporary drains must be carried out prior to release/reconnection to existing waterways.

Performance indicators and response actions where water is observed in temporary perimeter drains are listed in Table B5b. It is noted that temporary perimeter drains are to be isolated from external drains during earth works construction.

Where a rain event causes a breach of site containment bunds, turbidity monitoring of the stormwater discharge is required. Monitoring shall be conducted of water discharging from the breach and in Landers Pocket Drain, downstream of the site, at the location shown on Figure B1. Performance indicators and response actions are listed in Table B5c.

B5. PERFORMANCE INDICATORS

Table B5a: Water Quality in Drains and Storage Basins

Parameter		Monitoring Frequency	Performance Indicator	Action (after performance indicator exceedance)
Field Measurement	pH	Prior to reconnection to existing drains/waterways	>6 pH units	Treat water and remove (with discharge to land/soakage trench), Re-lime walls and base.
	Aluminium (indicator strip)		<1mg/L	
	total alkalinity		-	

Table B5b: Rain Event - Water Quality in Temporary Perimeter Drains

Parameter		Monitoring Frequency	Performance Indicator	Action (after performance indicator exceedance)
Field Measurement	pH	When water is observed in drains following a 20mm rain event	>6 pH units	Treat water and allow to soak away or remove and discharge to land.

Table B5c: Rain Event - Water Quality Following Containment Breach

Parameter		Monitoring Frequency	Performance Indicator	Action (after performance indicator exceedance)
Field Measurement	Turbidity	If a rainfall event causes breach of site containment	<60 NTU Or <10% of receiving environment turbidity	Repair breach and employ additional control measures confirmed by BAC Environmental Coordinator

Table B5d: Other Performance Indicators

Item	Performance Indicator
Liming of Drain Walls and Base	■ Correct lime application rates are applied as per Section B4(b)
Non conformance	■ All non-conformances are reported and rectified.

B6. MONITORING & REPORTING

The Site Manager shall be responsible for ensuring works and monitoring listed in Section B4 is conducted at the required frequency.

The Site Manager shall maintain a register of lime application (including a photographic record), water testing results and a record of inspections.

A summary report of all test results and inspections shall be compiled by the Site Manager each week and submitted to BAC Environmental Coordinator.

The Site Manager shall inform the BAC Environmental Coordinator of non-compliance with Tables B5a to B5d upon detection. The BAC Environmental Coordinator shall instigate an assessment of the impact within 2 days of such detections.

C1. GENERAL

The procedure outlined below is provided to monitor groundwater quality around each stage of surcharge earthworks.

C2. OBJECTIVES

- Appropriately monitor groundwater to identify water quality changes that may indicate ASS impact.
- Comply with conditions of licences, permits or other approvals issued for the project.

C3. STATUTORY REQUIREMENTS AND GUIDELINES

1) *Queensland Acid Sulfate Soil Technical Manual: Soil Management Guidelines V4.0,* 2014. Dear, S-E., Ahern, C. R., O'Brien, L. E., Dobos, S. K., McElnea, A. E., Moore, N. G. & Watling, K. M. Department of Science, Information Technology, Innovation and the Arts, Queensland Government;
2) Environmental Protection Act 1994;
3) Environmental Protection Policy (Water) 2009.

C4. IMPLEMENTATION MEASURES

C4 (a) Location of Monitoring Wells

- A series of monitoring wells shall be installed progressively around each earthworks stage prior to the commencement of any site filling with each stage. For larger stages where filling progresses in sub-stages, wells can be installed progressively as long as baseline monitoring can be completed prior to commencement of sub-stage filling activities.
- Groundwater monitoring wells shall be installed at a distance of not more than 50m from the toe of fill platforms for each stage.
- Wells located along site boundaries shall be installed beyond the outer edge of the proposed perimeter drain or flood storage.
- Internal wells shall be progressively decommissioned as each encroaching earthworks stage progresses.
- Wells must extend at a level of at least -0m AD.
- Nominal groundwater wells locations for each earthworks stage are marked on Figure C1. Actual well locations shall be selected in consultation with BAC Environmental Coordinator.

C4 (b) Baseline Monitoring

The following baseline groundwater monitoring program shall be adopted in monitoring wells installed progressively for each earthworks stage:

- One round of baseline groundwater quality data shall be collected from new wells before the commencement of filling. The baseline results will be compared against water quality results from existing wells on site. Baseline groundwater samples will be tested for:
  - Field measurements of pH, redox potential (Eh or ORP), dissolved oxygen, standing water level, EC and total alkalinity.
  - Laboratory measurements of total titratable acidity, total alkalinity, chloride, sulfate, dissolved aluminum (filtered) and dissolved iron (filtered).

C4 (c) Monitoring During Earthworks

- During filling and surcharge earthworks for each development stage, monitoring at well locations (associated with that stage) shall comprise:
  - Field measurements of water level, pH, EC, total alkalinity and redox potential in the field monthly until completion of surcharge filling.
  - Laboratory measurements of total titratable acidity, total alkalinity, chloride, sulfate, dissolved aluminum (filtered) and dissolved iron (filtered) every 2 months.

Performance indicators and response actions for water quality in groundwater wells during earthworks are listed in Table C5a.

C4 (c) Monitoring During Surcharge Period

- For the surcharge period (following earthworks) monitoring at well locations (associated with that stage) shall comprise:
  - Monthly water table level, pH, EC, total alkalinity and redox potential for the initial 2 months then every month until it can be shown that groundwater level has stabilized.
  - Laboratory measurements of pH, EC, total titratable acidity, total alkalinity, chloride, sulfate, dissolved aluminum (filtered) and dissolved iron (filtered) every two months for at least 6 months from commencement of the surcharge period or until 4 months of stabilized results it can be demonstrated.
  - Review of stabilized conditions should be conducted in consultation with the BAC Environmental Coordinator.

Performance indicators and response actions for water quality in groundwater wells during the surcharge period are listed in Table C5b.

C5. PERFORMANCE INDICATORS

Table C5a: Groundwater Monitoring Wells – During Earthworks

Parameter		Monitoring Frequency	Performance Indicator	Action (after performance indicator exceedance)
Field Measurement	Water Level	Monthly	Increase < 100mm above baseline	All results to be reviewed by BAC Environmental Coordinator to confirm the level of risk and need for alternative or additional control measures.
	pH		<0.5 pH drop below baseline	
	redox potential		-	
	EC		-	
	DO		-	
	total alkalinity		>60 mg/L	
Laboratory Analysis	pH, EC, total titratable acidity, total alkalinity, chloride, sulfate, dissolved aluminium (filtered) and dissolved iron (filtered).	Every 2 months	Review against preconstruction levels	

Table C5b: Groundwater Monitoring Wells – During Surcharge Period (post filling)

Parameter		Monitoring Frequency	Performance Indicator	Action (after performance indicator exceedance)
Field Measurement	Water Level	Monthly (until water levels stabilise)	Return to preconstruction levels	All results to be reviewed by BAC Environmental Coordinator to confirm the level of risk and need for additional management measures.
	pH		<0.5 pH drop below baseline	
	redox potential		-	
	EC		-	
	total alkalinity		>60 mg/L	
Laboratory Analysis	pH, EC, total titratable acidity, total alkalinity, chloride, sulfate, dissolved aluminium (filtered) and dissolved iron (filtered).	Every 2 months for at least 6 months following commencement of surcharge period (or until 4 months of demonstrated stabilised results)	Review against preconstruction levels	

C6. MONITORING & REPORTING

The Site Manager shall be responsible for ensuring monitoring listed in Section C5 is conducted at the required frequency.

The Site Manager shall maintain a register of groundwater testing results.

A summary report of all groundwater test results shall be compiled monthly and submitted to the BAC Environmental Coordinator.

The Site Manager shall inform the BAC Environmental Co-ordinator of non-compliance with Tables C5a and C5b upon detection. The BAC Environmental Co-ordinator shall instigate an assessment of the impact within 2 days of such detections.

D1. GENERAL

The procedures outlined below are provided to mitigate potential seepage of acidic water from surcharged areas.

D2. OBJECTIVES

- Provide neutralising source for acidic seepages resulting from surcharge activities.
- Comply with conditions of licences, permits or other approvals issued for the project.

D3. STATUTORY REQUIREMENTS AND GUIDELINES

1) *Queensland Acid Sulfate Soil Technical Manual: Soil Management Guidelines V4.0, 2014. Dear, S-E., Ahern, C. R., O'Brien, L. E., Dobos, S. K., McElnea, A. E., Moore, N. G. & Watling, K. M. Department of Science, Information Technology, Innovation and the Arts, Queensland Government;*

2) Environmental Protection Act 1994;

3) Environmental Protection Policy (Water) 2009.

D4. IMPLEMENTATION MEASURES

Pre-surcharging Works

- A lime cutoff trench 0.3 m wide and extending to the water table is required along the boundaries of the site as shown on Figure D1. The trench shall be constructed as close as practical (and within a distance of 5m in from) the proposed toe of the fill embankment, prior to the commencement of filling. The trench is to be filled with 150 kg of fine / coarse aglime mix / linear m. Spoil from construction of the trench should be limed at the rate indicated in Procedure A (Table A5a) and relevant to the adjacent section of drain and used as backfill and the remainder mounded on the surface and lightly compacted.
- A 10 m wide strip of lime ‘guard layer’ shall be placed along perimeter of each stage of filling – where wick drains are present prior to installation of wick drains and placement of the drainage blanket layer. The guard layer will comprise fine ground agricultural lime applied at a rate of 5 kg/m^2.

During Surcharging

- Inspection for seepage from the fill and/or drainage blanket shall be conducted monthly until surcharging earthworks are complete. If seepage is not observed during this period, no further inspections are required.
- Any seepage observed from the fill/surcharge materials should be monitored for pH using a calibrated meter and total titratable acidity (using field strips) daily when seepage is observed.
- Where the seepage water is found to have a pH of less than 6.0 and Total Titratable Acidity >40 mg/L, the water shall be collected, treated to a pH of greater 6.0 and disposed of to land surface or a soakage area within the proposed Auto Mall precinct.

D5. PERFORMANCE INDICATORS

Item	Performance Indicator
Liming of Guard Layer	■ Correct lime application rates are applied as per Section D4.
Construction of Lime Cutoff Trench	■ Lime Cutoff Trenches installed prior to filling.
Seepage Monitoring	■ Any seepage observed is tested and treated, where required.
Non conformance	■ All non-conformances are reported and rectified.

D6. MONITORING & REPORTING

The Site Manager shall be responsible for ensuring works and monitoring listed in Section D4 is conducted at the required frequency.

The Site Manager shall maintain a register of lime application and lime cutoff trench construction (including a photographic record), a record of inspections and water testing results.

A summary report of all test results and inspections shall be compiled monthly and submitted to the BAC Environmental Coordinator.

The Site Manager shall inform BAC Environmental Coordinator of non-compliance with Section D5 upon detection. The BAC Environmental Coordinator shall instigate an assessment of the impact within 2 days of such detections.

APPENDIX C

Important Information

IMPORTANT INFORMATION RELATING TO THIS REPORT

The document ("Report") to which this page is attached and which this page forms a part of, has been issued by Golder Associates Pty Ltd ("Golder") subject to the important limitations and other qualifications set out below.

This Report constitutes or is part of services ("Services") provided by Golder to its client ("Client") under and subject to a contract between Golder and its Client ("Contract"). The contents of this page are not intended to and do not alter Golder's obligations (including any limits on those obligations) to its Client under the Contract.

This Report is provided for use solely by Golder's Client and persons acting on the Client's behalf, such as its professional advisers. Golder is responsible only to its Client for this Report. Golder has no responsibility to any other person who relies or makes decisions based upon this Report or who makes any other use of this Report. Golder accepts no responsibility for any loss or damage suffered by any person other than its Client as a result of any reliance upon any part of this Report, decisions made based upon this Report or any other use of it.

This Report has been prepared in the context of the circumstances and purposes referred to in, or derived from, the Contract and Golder accepts no responsibility for use of the Report, in whole or in part, in any other context or circumstance or for any other purpose.

The scope of Golder's Services and the period of time they relate to are determined by the Contract and are subject to restrictions and limitations set out in the Contract. If a service or other work is not expressly referred to in this Report, do not assume that it has been provided or performed. If a matter is not addressed in this Report, do not assume that any determination has been made by Golder in regards to it.

At any location relevant to the Services conditions may exist which were not detected by Golder, in particular due to the specific scope of the investigation Golder has been engaged to undertake. Conditions can only be verified at the exact location of any tests undertaken. Variations in conditions may occur between tested locations and there may be conditions which have not been revealed by the investigation and which have not therefore been taken into account in this Report.

Golder accepts no responsibility for and makes no representation as to the accuracy or completeness of the information provided to it by or on behalf of the Client or sourced from any third party. Golder has assumed that such information is correct unless otherwise stated and no responsibility is accepted by Golder for incomplete or inaccurate data supplied by its Client or any other person for whom Golder is not responsible. Golder has not taken account of matters that may have existed when the Report was prepared but which were only later disclosed to Golder.

Having regard to the matters referred to in the previous paragraphs on this page in particular, carrying out the Services has allowed Golder to form no more than an opinion as to the actual conditions at any relevant location. That opinion is necessarily constrained by the extent of the information collected by Golder or otherwise made available to Golder. Further, the passage of time may affect the accuracy, applicability or usefulness of the opinions, assessments or other information in this Report. This Report is based upon the information and other circumstances that existed and were known to Golder when the Services were performed and this Report was prepared. Golder has not considered the effect of any possible future developments including physical changes to any relevant location or changes to any laws or regulations relevant to such location.

Where permitted by the Contract, Golder may have retained subconsultants affiliated with Golder to provide some or all of the Services. However, it is Golder which remains solely responsible for the Services and there is no legal recourse against any of Golder's affiliated companies or the employees, officers or directors of any of them.

By date, or revision, the Report supersedes any prior report or other document issued by Golder dealing with any matter that is addressed in the Report.

Any uncertainty as to the extent to which this Report can be used or relied upon in any respect should be referred to Golder for clarification.

As a global, employee-owned organisation with over 50 years of experience, Golder Associates is driven by our purpose to engineer earth's development while preserving earth's integrity. We deliver solutions that help our clients achieve their sustainable development goals by providing a wide range of independent consulting, design and construction services in our specialist areas of earth, environment and energy.

GLOSSARY

AIP	Airport Industrial Park.
Airborne Asbestos Fibres	Airborne asbestos fibres are generated by the mechanical disintegration of Asbestos Containing Materials (ACM) and subsequent dispersion of the fibres into the air from activities such as mining and the use, removal and disposal of asbestos and ACM. Dust generated from dry soil containing friable asbestos particles can also carry Airborne asbestos fibres.
ALARP	As low as reasonably possible.
ACM	Asbestos Containing Material - Any material, object, product or debris that contains asbestos.
AD	Aerodrome Datum.
AS/NZS	Australian / New Zealand Standard.
Asbestos	The fibrous form of mineral silicates belonging to the serpentine and amphibole groups of rock-forming minerals, including actinolite, amosite (brown asbestos), anthophyllite, chrysotile (white asbestos), crocidolite (blue asbestos), tremolite, or any mixture containing one or more of the mineral silicates belonging to the serpentine and amphibole groups.
Asbestos-Cement (AC)	Products consisting of sand aggregate and cement reinforced with asbestos fibres (e.g. asbestos cement pipes and flat or corrugated asbestos-cement sheets).
CPA	Central Parking Area
EHP	[Queensland] Department of Environment and Heritage Protection.
EPR	[Queensland] Environmental Protection Regulation.
Friable (Asbestos)	Asbestos-containing material which, when dry, is or may become crumbled, pulverised or reduced to powder by hand pressure. This may include ACM that have been subjected to conditions that leave them in a state where they meet the definition, such as weathering, physical damage, water damage etc.
GIS	Geographical Information System.
HHRA	Human Health Risk Assessment.
NATA	National Association of Testing Authorities.
National Exposure Standard (NES)	An airborne concentration of a particular substance, within the worker's breathing zone, which according to current knowledge, should not cause adverse health effects or undue discomfort to nearly all workers. NES are established, from time to time, by the Safe Work Australia (former NOHSC) and are maintained on the SWA website.
NEPM	National Environment Protection Measures.
NOHSC	[Former] National Occupational Health and Safety Commission (now SWA).
Nominated Person	A person who has undertaken training in accordance with that required under this ACM Management Plan and is assessed as capable by the Site Manager.
Personal Protective Equipment (PPE)	Equipment and clothing that is used or worn by an individual person to protect themselves against, or minimise their exposure to, workplace risks. It includes items such as facemasks and respirators, coveralls, goggles, helmets, gloves and footwear.
Respirable Asbestos Fibre	A fibre of Asbestos small enough to penetrate into the gas exchange regions of the lungs. Respirable asbestos fibres are technically defined as fibres that are less than 3 µm wide, more than 5 µm in length and have a length to width ratio of more than 3 to 1. Airborne dust has the potential to contain respirable asbestos fibres.
SWA	Safe Work Australia (formerly NOHSC)

1.0 PART A - INTRODUCTION

Brisbane Airport Corporation (BAC) has commissioned PSK Environmental Pty Ltd (PSK) to prepare this site specific Asbestos Containing Material (ACM) Management Plan for a proposed multi-lot 51 hectare undeveloped site to be filled, surcharged and developed to form a future Auto Mall Precinct. The site is situated between Airport Drive and Moreton Drive, to the south-east of the Central Parking Area (CPA) development, (Figure 1).

PSK has been requested to develop and document an approach for the safe removal and management of any ACM, should any such material be identified on the surface or in soil recovered from the site during clearing, excavation works and subsequent infrastructure construction at the site.

This ACM Management Plan has been completed in accordance with industry best practise, and meets the minimum requirements for management of ACM impacted soil under current Queensland environmental legislation, which defaults to the requirements of the Department of Health (DOH) *Guidelines for Assessment, Remediation and Management of Asbestos Contaminated Sites in Western Australia* [*DOH, 2009*] (WA Guidelines).

In line with BAC's proactive approach to Health and Safety at Brisbane Airport, the intention is to have this plan ready to be enacted in the event that asbestos is identified during works scheduled for the site.

2.0 BACKGROUND

2.1 Site Description

The future Auto Mall Precinct comprises an elongated rhomboidal 51 Ha parcel of land, narrowing toward the southern end. The main site is situated between Airport Drive (to the east) and Moreton Drive (to the west) and Nancy Bird Way (to the north), on the western edge of the greater Brisbane Airport. An Energex easement crosses from north east to south west, separating the southern-most third of the site. Additionally three flood storages totalling approximately 3 Ha are to be constructed on land adjoining the main site, across from Airport Drive and Moreton Drive (refer Figure 1).

The current site is, on average, at a surface RL of 2.4 m AD and is currently heavily vegetated with casuarina forest and mangroves. Landers Pocket Drain is the closet surface water body feature, located about 100 m west of the development. Surface water in Landers Pocket Drain flows north-east and south-west before discharging into Kedron Brook Floodway Drain (KBFD) at the northern end, and Kedron Brook at the southern end. The KBFD discharges into Kedron Brook.

2.2 Site History

Contamination investigations of the site have previously been undertaken by Golder Associates in 2016 (*Golder Document Ref. 1538021-013 & 1538021-011*). Golder refer to the portion of the site north of the Energex easement as Stage 1, and the portion to the south as Stage 2. Based on these reports, Stage 1 of the development covers an area of approximately 950 m by 450 m and Stage 2 of the development covers an area of approximately 500 m by 300 m.

Soil logs in the Golder reports indicate that Stage 1 and Stage 2 are underlain predominantly by a layer of fill (sands, gravels and clay) to depths ranging from approximately 0.3m to 1.6m which are in turn overlain by natural compressible alluvium.

Brisbane Airport Corporation maintains a Contaminated Sites Register (CSR). [Former] Contaminated Site 28 is located within the Stage 2 development area, on the boundary with the Stage 1 (based on Figure 1 of Golder Document 1538021-011). Site 28 was listed as containing 'black' mineral sands, but was not reported as containing Asbestos. The next closest site, [Former] Contaminated Site 2A, lies 200 m west of the site. Site 2A was listed for tannery wastes, coal tars, heavy metals and petroleum hydrocarbons, investigated in 1993 and 1996, 2005 and 200, and is listed as having been remediated by Coffey in 2008.

There is no record of asbestos on either Site 28 or Site 2A on the CSR. However, asbestos waste has been discovered dumped on the surface and mixed in soil fill in several unlisted locations previously on Brisbane Airport and so its occurrence cannot be disregarded.

2.3 General Information on Asbestos

Asbestos is the generic term for a group of naturally occurring minerals characterised by fibres with high tensile strength, flexibility, and resistance to thermal, chemical and electrical conditions. The most common types of asbestos include chrysotile, crocidolite and amosite (i.e. white, blue and brown/grey asbestos respectively). Asbestos fibres enter the body by the inhalation and/or ingestion of airborne particles that can become embedded in tissues of the respiratory or digestive systems.

World authorities have recognised asbestos to be a human carcinogen for over 20 years, based on observation of an increased incidence of lung cancer, mesothelioma and gastrointestinal cancer in occupationally exposed workers across a range of investigations and study populations. Information from animal studies on the inhalation of fibres support these findings, although evidence for carcinogenicity via ingestion is limited.

Asbestos is a contaminant that differs from most others. In particular, its toxicology is such that it primarily affects humans rather than being a risk to the environment. Inhalation of asbestos fibres can produce a range of lung-associated diseases, including cancers, sometimes resulting from only low levels of exposure. It usually occurs discretely in a given impacted area and will not generally degrade over time to form less harmful materials (i.e. it is very persistent). It can migrate through physical disturbance and dangerous fibres can be released.

Asbestos is not considered to be an environmental contaminant as it occurs naturally (Section 1.2.2 of WA Guidelines). However, serious health concerns are associated with the inhalation of asbestos fibres. Thus a health risk assessment has been undertaken and forms the basis of this management plan. Nothing specified in this plan alters or modifies guidelines as set down within the Safe Work Australia Code of Practice – How to Manage and Control Asbestos in the Workplace (2011), or the Safe Work Australia Code of Practice – How to Safely Remove Asbestos (2011), or the requirements laid down under all relevant Queensland legislation. Information contained in any one section must be read in conjunction with the whole of the ACM Management Plan, including appendices or attachments.

2.4 BAC Asbestos Policy

Brisbane Airport Corporation is striving to have all buildings and sites occupied or controlled by BAC be free of asbestos materials. The purpose of the Policy (and associated Management Plan) is to prevent the exposure of any person to airborne asbestos fibres while ACM remain in the workplace and to ensure compliance with asbestos prohibition regulations.

BAC conducts regular audits of buildings at Brisbane Airport, identifying the presence of asbestos and assessing the risk to the health and safety of persons. Where asbestos is located in leased premises, BAC will work with tenants to ensure that all persons are informed about ACM in their workplace, the risks associated with ACM and the control measures in place.

3.0 OBJECTIVES

This site specific ACM Management Plan is aimed at identifying issues related to handling any soil disturbed that contains ACM (where identified) and related constraints to the future Auto Mall Precinct development and associated works, including:

- Providing an approach through which any ACM identified during construction works at the site can be safely managed;
- Outlining requirements for air monitoring during the excavation works (should friable asbestos be identified) and subsequent remediation of any ACM impacted soil; and
- Outlining requirements for validating excavations following removal of any ACM impacted soil identified, or else containing ACM impacted soil onsite under a soil cap or finished pavement.

The content of an ACM Management Plan may change or undergo revision based upon additional information when made available, or on enacting the plan.

4.0 PROPOSED DEVELOPMENT

The proposed future Auto Mall is to comprise a 2.5 km test track in the middle of the site surrounded by development lots for future commercial use totalling approx. 38 Ha. Private access roads are situated around the perimeter of the site. An Energex substation and easement is present within the site. Three shallow flood storage areas will also be constructed close to the development site.

The future Auto Mall Precinct is to be filled and developed in three stages as highlighted in Figure 1. Earthworks at the site will include removing trees, slashing, grubbing and raking, or similar preparation, of the surface in areas where wick drains are to be installed representing approx. 6% of the developable area of Stage 1 (Figure 1); however, it is understood that the areas of wick drains may increase as part of the detailed design of the earthworks currently underway. Similar surface preparation will take place prior to the excavation of three flood storage areas outside proposed development site and the perimeter drainage channels. The remainder of the area proposed for filling and surcharge will have the trees removed, but will not be grubbed (i.e. rootballs and stubble will remain in place avoiding unnecessary disturbance). Clearing will be followed by placement and compaction of 2.0 m or more of imported fill material and temporary surcharge to levels ranging from 3.5m AD to 7.0m AD. Finished levels for the proposed track, commercial lots and perimeter roads will range from 3.25 m to 4.25 m AD.

Once Stages 1 and 2 are filled and surcharged, subsequent works will comprise the removal of excess surcharge to design fill levels to complete filling and surcharging of Stage 3. Limited future cuts are expected for service trenching associated with the future Auto Mall underground services. Additionally a small area to the immediate north of the Energex substation will be cleared and filled and set aside for a future transformer.

The drainage channels will be excavated around the site perimeter at grade level with invert levels as low as RL 0.2 m AD in the western portion of the site. The drainage channels will discharge into nearby surface water drains. Of the works proposed, the excavation of these channels and the flood basins are most likely to encounter the former surface (and possibly dumped ACM). It is understood that excavation of the perimeter drainage channels will be undertaken in stages to maintain surcharge fill stability.

PSK understand that the future Auto Mall site is proposed to be developed following the earthworks in stages, namely:

- Stage 1: Track, roads and selected development lots; lots north of the Energex easement between the track and Moreton Drive, and the Track and Nancy Bird Way.
- Stage 2: development lots south of the Energex easement.
- Stage 3 (last stage): development lots north of the Energex easement between the track and Airport Drive.

5.0 REGULATORY REQUIREMENTS

The ACM Management Plan has been developed in accordance with requirements of the following:

- Airports (Environmental Protection) Regulations, (1997)
- BAC Work Health and Safety Asbestos Corporate Standard (2012)
- Department of Health, Guidelines for the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia, (May 2009)
- Safe Work Australia (SWA) Code of Practice - How To Manage And Control Asbestos In The Workplace (2011a)
- Safe Work Australia (SWA) Code of Practice – How to Safely Remove Asbestos (2011b)
- Department of Health, Guidelines for the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia, (May 2009)

- National Environmental Protection (Assessment of Site Contamination) Measures (NEPM) 1999 - Schedules B1 and B2, (as amended May 2013). Note this now supersedes the original 1999, and Draft 2011 NEPM issues.

An asbestos management plan '*sets out how asbestos or ACM that is identified at the workplace will be managed, including, what, when and how it is going to be done'* (Safe Work Australia, 2011a). Table 1 indicates areas where an Asbestos Management Plan provides guidance (adapted from Safe Work Australia, 2011a).

Table 1: Areas of an ACM Management Plan

KEY AREAS	Applicable Section of Plan
The identification of asbestos and ACM, for example a reference or link to the asbestos register for the workplace, and the locations of signs and labels.	To be included if identified
Decisions, and reasons for the decisions, about the management of asbestos at the workplace, for example safe work procedures and control measures.	Section 7.2
Workers carrying out work involving asbestos, for example consultation, information and training responsibilities.	Section 7.4
Procedures for detailing accidents, incidents or emergencies of asbestos at the workplace.	Section 7.7
OTHER AREAS	
A timetable for managing risks of exposure, for example priorities and dates for any reviews, circumstances and activities that could affect the timing of action.	Section 7.2
Procedures, including a timetable for reviewing and, if necessary, revising the asbestos management plan and asbestos register.	Section 7.2
Identification of each person with responsibilities under the asbestos management plan and the person's responsibilities.	Section 7.3
Air monitoring procedures at the workplace, if required.	Section 7.5
An outline of how asbestos risks will be controlled, including consideration of appropriate control measures.	Section 7.5

6.0 RISK ASSESSMENT

6.1 Risk Management and Control

For an ACM related risk to eventuate on-site, the following are required:

- A source of asbestos (e.g. ACM present in surface or disturbed subsurface soils).
- A valid receptor (e.g. on-site workers, nearest off-site community, site users/visitors).
- A transport mechanism between the source and receptor (e.g. dust generation, direct contact).

If a source, receptor(s) and a transport mechanism are all present, then an exposure pathway exists. The risk posed by the ACM prior to redevelopment works is considered to be low as ACM has not been identified at [former] Contaminated Site 28 or elsewhere within the development area.

Any identification of suspect ACM is to be reported to BAC immediately, with sampling and analysis undertaken to confirm or otherwise the presence and nature of any asbestos found.

If ACM is confirmed, a suitable Sampling and Analysis Quality Plan (SAQP) is to be prepared and followed, and management measures and protocols specified in this ACM Management Plan adopted and work ceased in the affected area(s) until these measures are in place.

Effective management and control of risks associated with ACM uncovered during excavation require:

1. early **IDENTIFICATION** of ACM through ongoing inspection
2. performing a **RISK ASSESSMENT** for any ACM identified
3. implementing **CONTROL MEASURES** to mitigate the potential for asbestos fibres to be released to air
4. ongoing **ASSESSMENT AND REVIEW**

6.2 Tier of Risk Assessment Required

The asbestos risk assessment process involves the identification, evaluation and control / monitoring of all known sources of asbestos at the site. Asbestos represents a health risk to people only when asbestos fibres are airborne and subsequently inhaled. The risk to health increases as the number of fibres inhaled increases where the dose is a function of concentration of airborne asbestos fibres and duration of exposure.

Asbestos that is in a stable matrix (i.e. bound), or is effectively encapsulated or sealed while undisturbed represents a negligible asbestos related health risk, while disturbed friable asbestos represents a high risk. It is thus necessary to differentiate between 'asbestos hazard' and 'asbestos risk'. A hazard indicates potential for harm, while a risk refers to the probability of that harm actually occurring. The presence of asbestos in soil is a hazard, but while any asbestos remains covered or in a bonded state and does not release fibres into the air, the risk is low.

The WA Guidelines indicate that the primary reference in undertaking a Human Health Risk Assessment is the Contaminated Sites Management Series (CSMS), which includes *'The Use of Risk Assessment in Contaminated Site Assessment and Management: Guidance on the Overall Approach (DEC, 2006)'.*

This approach recommends that a Risk Assessment should start early in the investigation and management process in order to guide subsequent actions and to ensure that on-site personnel and the local community are protected during and as a result of any development.

Immediate hazard response actions and contamination control measures and contingencies may sometimes be necessary (as outlined in Appendices C and D of the WA Guidelines).

The WA Guidelines recommend a staged approach for risk assessment, involving:

- Tier 1: screening risk assessment;
- Tier 2: intermediate (simple) risk assessment; and
- Tier 3: detailed (site-specific) risk assessment.

Although complete exposure pathways have not been confirmed at this time (i.e. while the site remains undisturbed), a Tier 1 risk assessment has been developed (refer Section 5. of the WA Guidelines). Tier 1 includes development of a simple conceptual site model capturing information related to the contamination exposure pathway(s) to known receptors and thus helps determine where risk occurs.

If suspected ACM is identified and confirmed by laboratory analysis, a Preliminary Site Investigation (PSI) in accordance with Section 11 of the current NEPM (as of May 2013) will be required, including sampling and analysis of effected areas.

The minimum sampling frequency required to assess asbestos in soil in these areas according to the WA Guidelines is summarised in Table 2 (to reiterate, this is only required where the presence of ACM is confirmed). Note that if ACM is identified in any other areas during development, a similar sampling frequency would need to be adopted.

Table 2: Minimum Sampling Points for Characterisation of ACM

Work Area	Type of Disturbance	Disturbance Area	No. of Sampling Points	Equivalent Sampling Density	Diameter of Hotspot Identified (m) (95% Confidence)	Average Grid Size (m)
Flood Storage Areas	Uniform Area (Appendix A of WA Guidelines	~ 30,240 m^2	~ 40 in 3 areas	13.3 points/ Ha	~ 32	~27
Estimated Area for Wick Drains	Uniform Area (Appendix A of WA Guidelines)	~ 27,500 m^2	Up to 40 in 4 areas	13.5 points / Ha	~ 32	~ 25
Perimeter Drains	Linear Disturbance (Adopted)	~ 3,000 m	Up to 40	1 point / 75 m	n/a*	n/a*

Note: * Hotspot diameters are not particularly relevant for linear disturbances (i.e. aspect ratio of greater than 100:1), however, coverage confirms an adequate theoretical grid size.

The WA Guidelines do not take account the different types of mineral asbestos and fibre dimensions in developing investigation trigger criteria for asbestos in soil. However, such information is useful if site specific clean-up criteria are required to be developed.

6.3 Characterization of Asbestos Contamination

Specific site investigation information on asbestos distribution, concentration and condition (i.e. especially relating to fibre generating potential) is of most importance in characterising asbestos contamination.

While Section 11 of the NEPM provides information on conducting an asbestos risk assessment, it generally defaults to the WA Guidelines and is intended to be used in conjunction with these. Sampling and analysis requirements for risk assessments have been developed for areas where the existing surface will be significantly disturbed and ACM may be detected; particularly the installation of the perimeter drainage channels totalling approx. 3,000 linear metres in length, in areas where wick drains will be installed and the external flood storage areas.

The minimum sampling frequency required to assess asbestos in soil in these areas according to the WA Guidelines is summarised in Table 2. Note that if ACM is identified in any other areas during development, a similar sampling frequency would need to be adopted.

It has been assumed that fill to be imported to site and surcharge material will originate from a 'clean' source, and will not contain ACM. Given the site will be covered by imported fill and temporary surcharge, the risk of exposed ACM being present on the site is very low. However, the likelihood that some ACM impacted soil underlies some areas of the future Auto Mall Precinct cannot be disregarded completely. Thus, a low risk remains of ACM being present in areas that will not be permanently covered by 'new' fill. Encountering ACM during excavation of the perimeter drainage channels and flood storage areas is more likely and remains a moderate risk.

Given the information available, the proposed development and associated drainage works is considered a Tier 1 risk. This will remain the case unless ACM is specifically identified during clearing operations, drainage earthworks or trenching for any services below current RL. If asbestos is detected, the occurrence of ACM in soil will need to be clearly delineated laterally and vertically and the extent identified on an appropriately scaled Figure (i.e. minimum 1: 1,000 scale) before any further disturbance occurs. ACM need only be identified in areas that are to be disturbed by clearing and grubbing and excavations for drains or in-ground services.

Reference to Table 1 of the WA Guidelines 'Triggers and Types of Asbestos Investigations', indicates that the appropriate scenario for this site is 'Possible', i.e. uncontrolled fill without mixed building waste and/or an undeveloped site adjacent to urban infill (& possible dumping)

6.4 Determining Exposure Scenario

Potential exposure includes all activities associated with the site during its development and for future long-term management of areas not completely covered by recent fill.

Possible receptors and potentially complete exposure pathways include:

- Site construction personnel – direct contact and dust during site works;
- The Local community - i.e. nearest tenants including buildings and carparks in the Central Parking Area to the west and the International Terminal and Coles Express fuel depot, which are the receptors most vulnerable to dust emissions;
- Site visitors and final users (i.e. users of the finished future Auto Mall).

For asbestos, the primary exposure concern will be any activities with the potential to generate the release of airborne asbestos fibre from any ACM present, including direct disturbance and associated wind and water derived erosion. The possible release of airborne asbestos fibre is considered to be limited to clearing of the surface in preparation for filling, the exposure of pre-existing subgrade, excavations for services and surface drains and any stockpiled spoil.

Although only 'possible' complete exposure pathways during construction have been identified, a Tier 1 risk assessment has nonetheless been undertaken based in general on Schedule B1 of the National Environment Protection (Assessment of Site Contamination) Measure – Guideline on the Investigation Levels for Soil and Groundwater (NEPM Variation 2013) without carrying out soil sampling or analysis.

At this stage, evaluation is theoretical, as there are no specific soil test results or air monitoring data available for the actual site. However, if results of any monitoring conducted during the construction phase or relevant activities on nearby sites are made available, they should be utilised in refining the risk model.

Any wind breaks and air quality sampling sites should be placed downwind of the site on the site boundary. These would only be adopted if friable asbestos (FA) or asbestos fibres (AF) is identified. However, as wind direction is seasonally influenced, their placement will be principally dependent on the time of year when construction is undertaken.

6.5 Risk Outcomes

For the Tier 1 assessment, the contamination concentrations (if known) are compared against the soil asbestos investigation criteria levels specified in Section 6.6. In this instance, criterion IV (0.02%) has been adopted as the proposed site use is as 'public open space'.

If levels of ACM identified on the site do not exceed criterion IV and subsequent investigations undertaken are deemed to be in accordance with the WA Guidelines, then no further specific management actions are required. If exceedences of criterion IV are reported, these criteria are to be used as 'clean-up' goals or other appropriate forms of remediation undertaken and a more detailed Tier 2 or Tier 3 assessment completed before works can continue.

6.6 Investigation Criteria and Clean-up Goals

Findings of research conducted in the Netherlands by Swartjes and Tromp in 2008 was used in developing the WA Guidelines investigation criteria. In the WA Guidelines, the investigation criteria reported by Swartjes and Tromp are divided by a factor of 10 to take into account the greater dryness and dust-generating potential of many local Australian soils and include naturally occurring asbestos.

The fibrous asbestos criterion applies to both fibrous asbestos (FA), and asbestos fibres (AF) due to their ability to generate asbestos fibre. These criteria mirror the National Environmental Protection Measure (NEPM) site uses and associated default exposure ratios.

The WA Guidelines have adopted the soil asbestos investigation criteria summarised below. For this site, **Criterion IV** is the most appropriate although if fully sealed post development, Criterion V could conceivably be adopted:

I. 0.001% w/w asbestos for FA and AF – For all site uses.

II. 0.01% w/w asbestos for ACM – For residential use, day care centres, preschools, etc.

III. 0.04 % w/w asbestos for ACM – For residential with minimal soil access.

IV. 0.02% w/w asbestos for ACM – For parks, public open spaces, playing fields, etc.

V. 0.05 % w/w asbestos for ACM – For Commercial/Industrial

Note: that the FA and AF criteria of 0.001% w/w remain fixed for all site uses because the means to determine concentration differences at this level of detection is difficult.

These criteria can also be adopted as soil clean-up goals if this is the chosen form of remediation, rather than capping the impacted material with clean, compacted fill. In order for this to be achieved, the top 10 cm of soil must also be made completely free of visible asbestos. This may be achieved by installing, as a minimum, 10 cm of clean, compacted fill as a capping, or in the case of ACM or FA contamination, by several cycles of hand-picking and fine raking taking into account the 'Hand-Picking (Emu-Bob)' procedure outlined in Section 4.1.1 of the WA Guidelines, followed by validation.

7.0 PART B - ACM MANAGEMENT PLAN

The following ACM Management Plan is to be implemented immediately if any ACM is confirmed in soils disturbed at the site (including associated service trenching and drainage works).

7.1 Proposed Remediation Methods

7.1.1 General

The Draft National Environment Protection (Assessment of Site Contamination) Measure (April 2011) promotes on-site remediation and management as the preferred option for dealing with contaminated soils. In the hierarchy of remedial options, disposal to landfill should be used only when no other method of dealing with the spoil is available and the operator of the landfill agrees to accept the material for disposal.

On-site remediation management, or off-site disposal to landfill, were considered appropriate options to manage the identified ACM impacted soil; however, the preferred remediation method is to manage the identified ACM impacted soil *insitu* by covering the ACM impacted soil with clean fill and/or sealed pavements to provide a barrier between the ACM and potential receptors, except for excess spoil from service trenches and perimeter drains which may need to be relocated and capped or disposed of.

Where ACM is identified, the BAC WHS Asbestos Corporate Standard (see Appendix A) is to be followed including the provision of signage as appropriate.

7.1.2 Management Aims

Where ACM is identified , management goals applicable to this site include the following activities:

- Reduce the risk of generating airborne asbestos fibres by implementing dust control measures to ensure levels are consistent with that of background concentrations – e.g. use of fine water spray
- Undertaking remediation and subsequent validation of all exposed surfaces where ACM has been identified
- Capping so that the asbestos impacted area poses a negligible risk to future site users.

If capping is adopted for management by BAC, a minimum of 0.5 m of clean soil will be placed on the site as a capping layer, in accordance with Section 5.2 of the WA Guidelines. In addition to the minimum 0.5 m capping layer, a geo-fabric layer with a coloured strip for identification will be placed between the impacted material and the capping layer to provide an indication of the presence of underlying ACM in soil contamination to future maintenance and/or construction workers. The proposed works at the site include placement of fill that will generally be thicker than 0.5 m and hence will act as a capping layer. Excess spoil from service trenches and perimeter drains which cannot be replaced in the trench and capped over must be removed offsite or capped elsewhere within the work zone.

7.2 Ongoing Management Requirements

To effectively manage integrity of a capping layer, long term management of the site is required including:

- listing the defined Management Area(s) on BACs Contaminated Sites Register (CSR) accompanied by copies of the relevant investigation and site remediation reports and the current revision of this ACM Management Plan;
- approving the future works proposed in the capped area through BAC's development approval process or Permit to Work (PTW) and which will include provisions for asbestos management;
- undertaking annual inspections of the capping layer / pavement to assess the continued integrity;
- employing short-term management requirements during the capping works and ongoing management of the capping layer post capping as detailed in this plan; and
- vegetating (with shallow rooting grasses etc.), or otherwise stabilising any unpaved areas of capping to reduce soil erosion.

7.3 Organizational Responsibilities

This ACM Management Plan is to be integrated into current BAC asbestos management procedures and into redevelopment works that will be undertaken on the site. The following key personnel are responsible for the implementation of the control measures discussed in this document.

7.3.1 Principal Contractor(s)

The Principal Contractors' responsibilities include:

1. Ensuring guidelines and recommendations set out in this ACM MP are adhered to.
2. Ensuring asbestos related matters are safely controlled including specific contractor inductions.
3. Implementing appropriate work methods and control measures for all staff and subcontractors working within areas of known ACM impact, in accordance with the conditions and of this plan.
4. Managing of systems to ensure suitable contractors and consultants are engaged to carry out asbestos-related works and to ensure the necessary safety standards are maintained for the works.
5. Obtaining necessary approvals from regulatory authorities prior to starting any removal of soil impacted with ACM, if required (e.g. EHP disposal permit). Lead in time may need to be allowed for.
6. Ensuring site personnel and visitor concerns with asbestos related matters are reported and dealt with in a satisfactory and timely manner.
7. Arranging for assessment and sampling of suspected ACM, if identified.
8. Ensuring all remedial works involving ACM are suitably supervised.
9. Maintaining a register of all relevant asbestos documentation including updating the asbestos register and/or ACM Management Plan.

7.3.2 Site personnel

Site personnel (including subcontractors) responsibilities include:

1. Informing the construction manager of the presence of any unknown asbestos hazard or a suspected asbestos hazard identified on the site.
2. Complying with this ACM Management Plan to ensure all personnel on-site including visitors are not at risk of exposure to airborne asbestos fibres.

7.3.3 Other Contractors

Other Contractor's responsibilities include:

1. Ensuring that work methods and procedures comply with the relevant legislation, codes of practice and industry standards, and undertake work according to the requirements nominated by BAC.
2. Employing suitably trained, skilled and competent staff during encapsulation or excavation of any ACM impacted area.
3. Reporting to BAC and/or its Principal Contractor before undertaking any works on sites identified as possibly containing ACM.
4. Ensuring that their employees are inducted in safe work procedures for asbestos and ACM.
5. Ensuring that all work is conducted in a safe and competent manner.
6. Reporting incidences or potential asbestos hazards to the applicable responsible officer(s) before further works are carried out.

7.3.4 Remediation Supervisor

Management and remediation (if required) should be supervised by a suitably qualified person to ensure methods documented in this plan are undertaken correctly. Where ACM has been identified It is prudent to ensure any interim clearing or development be supervised by a suitability qualified person.

7.4 Health & Safety Requirements

7.4.1 Occupational Heath Exposure Standards

Exposure of site personnel to asbestos is to be limited as much as is reasonably achievable. Where occupational exposure to asbestos or ACM is likely to occur, exposure is not to exceed legislated occupational exposure standards for asbestos published by Safe Work Australia.

Occupational exposure is measured using the Membrane Filter Method, by collecting a sample of air from the breathing zone of a person, over eight hour duration. The current Australian occupational exposure standards for asbestos are:

- Chrysotile (white asbestos) – 1.0 fibres per millilitre;
- Amosite (brown asbestos) – 0.1 fibres per millilitre;
- Crocidolite (blue asbestos) – 0.1 fibres per millilitre;
- other forms of asbestos or a mixture of asbestos types – 0.1 fibres per millilitre.

(Refer: *NOHSC, 1995 - Exposure Standards for Atmospheric Contaminants in the Occupational Environment, Australian Government Publishing Service,* Canberra).

7.4.2 Personal Protective Equipment

The principal exposure pathway for asbestos exposure is through inhalation of dust particles. PPE must be used to reduce the potential of exposure. As a minimum, disposable dust masks should be worn by all personnel at all times on-site. The potential to inhale particulate matter can be further reduced by the use of P2 respirators for personnel working on-site.

These respirators must be used if ACM is identified at the site and the following implemented:

- Respiratory protection shall be worn by all persons within Work Zones on-site.
- Persons required to wear respiratory protection shall receive training and instruction on the selection of appropriate equipment, its usage and maintenance.
- Respirators (dust masks) shall be issued on a personal basis. Respirators shall conform to the requirements of Australian Standards AS1715 and AS1716 and must be of a minimum P2 standard.
- Persons required to wear facial fit respirators shall be clean shaven.
- Non-disposable respiratory protection shall be cleaned regularly, at least at the end of every shift.
- Regular cleaning and maintenance of respirators should be carried out in an area free of asbestos contamination using a damp cloth. The potential exposure risk for cleaning respirators is considered negligible. Regular cleaning is essential because dirt can interfere with the operation of valves and seals or the outside of the respirator may become contaminated during normal and fibres may be transferred to the inside of the respirator from where they may be inhaled
- All tools and equipment shall be cleaned and washed with water and wet wiped with a damp cloth prior to leaving the work zone.
- All vehicles shall be washed down with water and the site manager shall inspect all equipment and vehicles for possible asbestos contaminants before they leave the Work Zone.

7.4.3 Personnel Hygiene

If ACM is identified at the site disposable coveralls shall also be worn by all persons within the Work Zone until impacted soil is removed or capped. All persons leaving the Work Zone shall thoroughly clean footwear of all adhering materials through the use of water.

Persons shall not eat, drink or smoke within any established Work Zone(s).

All disposable PPE shall be disposed of as contaminated waste once used in appropriately labelled asbestos waste bags and double bagged.

7.5 Management of Remediation Works

Two methods of remediation are available: disposal and encapsulation. Disposal off-site may not be practical and would involve a higher level of supervision, so encapsulation is the preferred remediation option. However, any excess spoil from service trenches or the perimeter drains may need to be removed offsite under an EHP Disposal Permit, or else capped adequately, elsewhere within the defined work zone.

7.5.1 Air monitoring

If ACM is confirmed in the management area, monitoring for airborne asbestos fibres will be required during construction works involving disturbance of soil and established prior to commencing work. Fibre air monitoring must be undertaken by a qualified person during any soil disturbance activities within confirmed ACM impacted area.

Airborne fibre monitors shall be placed within the Work Zone in areas downwind of the site where ACM is detected. Wind direction is predominantly south-easterly for most of the year at Brisbane Airport, but may change seasonally and should be confirmed prior to undertaking any specific monitoring. Assuming the predominant south-easterly wind direction, monitoring stations would be required along the north-western boundary of the future Auto Mall Precinct placed at a minimum of 400 m spacings downwind of areas(s) where ACM is confirmed. Suitable monitoring locations are indicated on Figure 1 (although 8 possible locations are depicted, fewer locations could be utilised depending on where ACM is actually identified).

7.5.2 Implementation of Control Measures

Any exposed ACM is to be capped (or removed and the surface validated). Prior to the commencement of the capping of ACM impacted soil, the following control measures are required to be implemented:

- Establish a support zone and define the extent of work zone.
- Barricade or rope off the area(s) to be capped.
- Erect appropriate signage warning of asbestos hazard.
- Ensure all workers entering the site are wearing respirators that shall conform to the requirements of Australian Standards AS1715 and AS1716 and must be of a minimum P2 standard.
- Engage an environmental consultant to undertake air monitoring and supervision.
- Engage a suitably qualified person to inspect all areas prior to disturbance.
- Provide dust suppression in the form of a light water spray, applied every two hours during dry periods, less often if surface soils remain moist.
- Suspend works in times of high wind during dry periods.
- Machine operators are to remain within the cab of the machine which must have air-conditioning fitted with the appropriate filter or operated with air being recirculated within the cab.

Should monitoring detect airborne fibres at a concentration exceeding the ‘site clearance criterion” (i.e. 0.01 fibre/ml), then works are to cease until improved management measures are adopted. These can include increased watering frequency and/or installation of hessian wind breaks up wind of the affected areas. Note that this is stricter than the actual health-based limit of 0.1 fibre/ml.

7.5.3 Support Zones

A Support Zone is to be established by BAC’s nominated contractor, based on site conditions. This is considered to be a safe area and can contain temporary buildings, washdown area etc. Site safety briefings would be carried out in the Support Zone at the commencement of each work shift. The Support Zone can be incorporated into the Contractor’s Compound (if not situated within the Work Zone) or in any areas that will not be disturbed. Any vacant area including the designated Energex easement through the site could be utilised for this purpose provided there is sufficient room and it is at least 100m^2 (refer Figure 1).

7.5.4 Work Zones

Temporary activity specific Work Zones will be established by BAC or its nominated contractor in any areas where ACM is positively identified. During any capping works the Work Zone(s) will be barricaded as required. Work Zone(s) are to extend at least 5m beyond all sides of the work area; for this reason the designated site should not extend to within 5m of existing roads.

If ACM impact is limited to only portion(s) of the site then only the affected portions, extending 5m beyond the impacted area in all directions, need be barricaded and designated a Work Zone. The asbestos risk within the Work Zone will dictate fulltime wearing of specified personal protective equipment (PPE) if any ACM has been identified.

7.5.5 Hand/Emu Pick

Prior to continuing works within any confirmed impacted areas, an initial 'emu pick' is to be undertaken to clear the site of any visible fragments of possible ACM. Any fragments should be placed within appropriately designed and labelled asbestos waste bags and disposed of at a licensed facility. The emu pick is to be undertaken by a person qualified in accordance with the strategies outlined in the WA Guidelines.

7.5.6 Site Clearing and Grubbing

As part of development works, some clearing, slashing and/or raking of vegetation will be required. As this may involve the disturbance of soil and therefore the potential disturbance of ACM (where confirmed), management practices outlined in this ACM management plan are to be adhered to during this activity.

Vegetation to be removed will generally not include any roots (i.e. rootballs are to remain insitu). However vegetation stripped for wick drains (Figure 1), drainage channels, flood storage areas and other trenching activities will include roots. Prior to vegetation being mulched, roots should be visually inspected onsite for possible ACM. If ACM is suspected, the roots should be removed and disposed of as asbestos waste. Burning of vegetation should not be undertaken onsite as potential ACM on surface soils may incur some degradation increasing the risk of airborne asbestos fibres.

7.5.7 Dust Suppression

When any soil disturbance activities are to be undertaken, a fine water spray shall be used to suppress the dust at the commencement of the day's construction activities and at regular intervals during the day, i.e. every two hours, or when surface water evaporates or dust is observed. Spraying is to be used during any soil disturbance within the impacted area. Where possible, temporary buildings and plant is to be situated upwind from ACM impacted excavation areas during soil disturbance works.

7.5.8 Temporary Containment

The principle pathway for asbestos exposure is through inhalation of particulate matter (dust). If the remediation of an impacted area is delayed for a period of greater than 1 month and other personnel will be operating on-site, the ACM impacted area(s) are to be covered in the short term with a thin layer of sand or gravel, or minimum 200 µm thick plastic, well secured. This will limit exposure risk to site personnel and the public. For the containment to be effective it must be able to withstand heavy rain and strong winds. No persons are permitted to disturb containment areas unless authorised by BAC.

When the temporary containment is no longer required, decommissioning would involve removing the plastic layer in a manner which minimises disturbance. Sand or gravel would remain and be included in ACM impact materials for disposal or capping. Fibre air monitoring should be continued during setup, containment and decommissioning.

7.5.9 Regular Inspection

To monitor the effectiveness of temporary onsite containment area, the area is to be regularly inspected. Inspections are also to be undertaken immediately after heavy rainfall events. Should areas of exposed ACM impacted soil be identified, these areas should be re-covered immediately.

Where applicable, recently established vegetation or cover layers such as geo-fabric are to be monitored on an ongoing basis.

7.5.10 Ongoing Management of ACM

Should site personnel observe suspected ACM fragments at the site, these materials should be collected immediately and placed into labelled bags for disposal. The risk to health from handling asbestos cement or sheeting fragments is low as the asbestos fibres are bound into a cement matrix and are unlikely to release respirable fibres unless mechanically abraded.

When the materials are safely contained, a judgement can be made as to whether the materials can be disposed of as asbestos waste, or if procedures to safely return the materials to the site should be developed. If any friable asbestos is detected, the area should be barricaded immediately and a suitably qualified person (i.e. a Class A Asbestos Removalist) be employed to remove the asbestos.

7.5.11 Management of Suspected ACM Outside Delineated Areas

Should site personnel observe possible ACM on an area not identified as ACM impacted, this material is to be collected immediately by a suitably qualified person and placed into asbestos bags (refer to Section 5.5 of the SWA Code of Practice *How to Manage and Control Asbestos in Workplace* for specifications of asbestos bags) and sealed.

The risk to health from handling asbestos cement fragments is considered negligible as the asbestos fibres are bonded into the cement matrix and are unlikely to generate respirable fibres unless mechanically abraded (i.e. shredded, ground etc.). However, as a precautionary measure, all persons handling asbestos cement fragments should wash their hands immediately after contact. Sealed asbestos bags containing asbestos fragments may be stored on site in a secure area until such time that the bags can be removed by a licensed contractor. If friable asbestos is detected, the area should be barricaded immediately and a suitably qualified person (i.e. a Class A Asbestos Removalist) be employed to dispose of the material.

7.5.12 Sampling, Analysis & Validation

If suspected ACM is observed during the works and future sampling is required, samples are to be analysed using polarised light microscopy (PLM) or other applicable analysis techniques such as scanning electron microscopy (SEM), and any airborne fibre monitoring undertaken using the membrane filter method. All analysis is to be conducted by a NATA accredited laboratory.

Smaller, isolated areas (if remediated) – spoil is to be sampled for validation at a rate of 1 sample per 50m^2 or per 10 linear m length for predominantly linear excavations.

7.5.13 Capping Works Operations

Any ACM impacted areas that are to be capped must be clearly delineated and identified on an appropriate figure which shall be appended to a revised ACM Management Plan. Additional activities that may involve soil disturbance within ACM impacted areas after encapsulation should also be undertaken in accordance with these management procedures.

All information and works pertaining to the encapsulation of soil containing ACM is required to be recorded and reported (refer to section 7.5.16 below).

All works at the site involving the removal, encapsulation, transport, disposal or otherwise potential disturbance of ACM impacted soil shall be performed in accordance with all relevant State Acts, Regulations, Codes of Practice, Advisory Standards and industry standards (Section 6.0 of this document).

7.5.14 Capping Materials

Imported material is to be used for any capping. Such material is required to be verified as 'clean fill' from a confirmed source or Virgin Excavated Natural Material (VENM) which includes manufactured materials.

Capping material shall not consist of actual or potential Acid Sulfate Soils (ASS) unless lime treated and validated.

The following procedures are to be implemented for placement of capping material:

- Practical measures must be undertaken to reduce the risk of erosion of the finished cap. This may include the use of perimeter sediment fences, vegetative cover, geo-fabrics and/or pavements;
- The capping layer must be a minimum thickness of 0.5 m compacted earth (including any bulk fill);
- The horizontal and vertical boundaries of the asbestos impacted layer and completed capping layer must be surveyed to an appropriate height datum and a plan prepared and maintained on record.

Geo-fabric textile layers (where used) are to meet the following requirements:

- be permeable to water;
- have a high visibility (i.e. coloured strips incorporated) and good tensile strength;
- be rot-resistant and chemically inert;
- cover the impacted area approximately 0.5 m beyond the boundary of the impacted area if possible;
- parallel sheets are to be fixed together with at least a 20 cm overlap.

All documentation relating to any onsite encapsulation undertaken, including a plan of the location encapsulated and a 'typical' transverse section, must be provided to BAC on completion of works. Note that a section is not necessary for linear works.

All works will be conducted applying the appropriate control measures and in accordance with all applicable Regulations and Codes of Practice including those listed in Section 6.0 of this document.

7.5.15 Inspection of Capping

To monitor the effectiveness of the onsite encapsulation, it is essential that capped areas be inspected annually, as per the Code of Practice for the Management and Control of Asbestos in Workplaces (2005), by a responsible officer appointed by BAC, or a suitably qualified person. Should areas of erosion be identified, these areas should be reinstated immediately with clean soil.

Where applicable, any vegetation cover should also be monitored on an ongoing basis. In areas where capping (i.e. fill) is greater than the minimum 0.5 m; inspection is not required unless work involving disturbance of the fill to within 0.5 m of the previous surface level is subsequently undertaken.

All outcomes of inspections are to be documented in Brisbane Airport's asbestos register or otherwise recorded.

7.5.16 Reporting and Documentation

BAC or the Principal Contractor (TBC) is responsible for maintaining a record of events relating to all asbestos works at the site. Should any asbestos related works be undertaken, these events are to be recorded and maintained for future reference.

The following (as a minimum) requires recording:

- Details of all inspections;
- Details of all remediation works;
- Identification of any ACM impacted areas;
- Any complaints / incidents that occur relating to asbestos;
- Any authorised or unauthorised intrusion of the soil capping layer; and
- Any other asbestos related issues.

7.5.17 Offsite Disposal

If excavation of soil containing ACM is undertaken and it is required to be disposed off-site, the material will require further assessment as to whether it can be classified as regulated waste, contaminated soil or uncontaminated soil. Such classification is to be undertaken by an appropriately qualified and experienced person in accordance with Section 381 of the Environmental Protection Act (1994) (subject to revision of that Act).

If ACM or impacted soils are classified as regulated waste, it can be disposed to an approved landfill by vehicles licensed with the EHP for the transport of regulated waste. As the parent Lots that effectively comprise the whole of the Brisbane Airport are listed on the State's Environmental Management Register a Disposal Permit will be required regardless of whether other contamination is identified prior to disposal. Disposal permits, a letter of acceptance from the landfill site and all other disposal documentation must be supplied to BAC and/or the Principal Contractor upon completion of works.

Information related to the transportation of asbestos materials in Queensland is summarised in a 'Compliance Alert' – EHP, June 2013 (Appendix A).

7.5.18 Decontamination of Personnel and Equipment

Decontamination is an essential process in preventing the possible distribution of asbestos fibres to other areas on or off the site.

Disposable P2 respirators are to be removed in the following method:

- Spray a light mist of water onto your face and wet wipe. Then remove the respirator by lifting it up, away from the breathing zone.
- Disposable respirators should be discarded into the waste bag.
- The waste bag must then be placed into a second waste bag and sealed gooseneck style.
- Hands and face are to be washed.

Regular cleaning of respirators (non-disposal) is essential because:

- Dirt can interfere with the operation of valves and seals and lead to leaks of contaminated air into the respirator.
- The outside of the respirator may become contaminated during normal use. If contamination is not removed it may be transferred to the inside of the respirator from where it may be inhaled.
- Normal good hygiene practice dictates cleaning and disinfecting of respirators on a regular basis.

All persons leaving a designated Work Zone shall thoroughly clean footwear of all adhering materials through the use of water. All tools and equipment shall also be cleaned and washed with water and wet wiped with a damp cloth before leaving a Work Zone. Prior to leaving the work zone all vehicles shall be washed down with water.

The site manager shall inspect all equipment and vehicles for possible asbestos contaminants before it leaves the Work Zone.

7.5.19 Decontamination Plant and Equipment

Plant that remains clean of ACM impacted material at all times will not require specific decontamination. If plant does come into contact with ACM impacted material, decontamination of plant and equipment will occur as follows:

- A designated "wash down" area shall be selected and used consistently throughout the works. The plant and machinery "wash down" area must be situated within a work zone (any Work Zone is suitable.
- All plant and equipment is to be washed thoroughly using a water hose at the conclusion of each day's work and prior to leaving the site.

- The plant and equipment wash down area is to be lined with 200 micron (200 µm) plastic and contoured to catch and channel all wash water through filter medium with a pore size of less than 5 microns (<5 µm). After washing of the plant and equipment is concluded, filter media should be disposed of as 'asbestos waste'.
- Appropriate disposal will comprise placing the filter media in a clear polyurethane bag, tying the bag 'gooseneck' style and then placing the sealed bag into a second polyurethane bag and sealing as before (i.e. double bagging).
- Appropriate PPE shall be worn by all persons during washdown of plant and equipment and bagging of the filter medium.
- At the completion of works the plastic liner is to be disposed of as asbestos waste using the procedures as stated above. If there is any indication that the integrity of the liner has been compromised, the top 0.1 m of soil directly below the break in the liner is to be scraped up and disposed of as per the disposal permit.

7.6 Management of ACM Post Works

On-going management of any soil capping is important to ensure ACM is not uncovered in such a manner that future contractors, BAC staff, visitors and site users are not unnecessarily exposed to airborne asbestos fibres. The coloured strips incorporated into geo-fabric placed on top of the cap will act to alert offenders if capping over any ACM is inadvertently disturbed.

Future excavation of ACM impacted soil and disposal offsite to an approved landfill site may not be the most appropriate control method given the relatively low risk the asbestos cement fragments pose and the cost to undertake such works, so prompt replacement of broken or deteriorated capping is a preferred option.

7.6.1 Notification of Future Works

Any future works proposed on the future Auto Mall Precinct site should be identified in BAC's development approval process or Permit to Work (PTW) process and should consider the requirements for asbestos management. Any contractor and/or person(s) undertaking soil disturbance work within the site must comply with this plan if ACM is subsequently identified and confirmed.

7.6.2 Implementation of Control Measures

Prior to the commencement of future soil intrusion works within any capping area the following control measures are required to be implemented:

- Establish suitable locations for a support zone as per Sections 7.5.3 and 7.5.4 should ACM be confirmed.
- If ACM is confirmed, rope off areas to be capped and establish the extent of the Work Zone.
- Erect appropriate signage warning of asbestos hazard.
- Ensure all workers entering the site are wearing P2 masks.
- Engage an environmental consultant to undertake air monitoring and supervision.
- Engage a suitably qualified person to inspect all areas prior to disturbance.
- Ensure that machine operators remain within the cab of the machine which must have air-conditioning fitted with the appropriate filter or operated with air re-circulated within the cab.
- BAC or its nominated contractor shall establish a Support Zone(s) based on site conditions and nature of works, to be a 'safe area' on-site to contain project administration areas.
- Undertake Site Safety briefings at the commencement of each work shift as appropriate.

7.6.3 Air monitoring

Fibre air monitoring must be re-introduced and carried out by a qualified person during any soil disturbance activities within designated capped areas. Airborne fibre monitors shall be placed within the work zone in areas downwind of the site, as well as on the boundary of the nearest occupied areas (receptor), as previously identified.

7.6.4 Designation of Future Work Zone(s)

Temporary activity specific Work Zone(s) will be established by BAC or its nominated contractor. During future soil disturbance works, Work Zone(s) will be barricaded as required. Where practicable, the Work Zone should extend 5m in all directions from the work area. Person entering a Work Zone should be wearing the appropriate PPE.

7.6.5 Temporary Containment

Any future disturbance of soil will require temporary containment measures and these are to be undertaken in accordance with the requirements of Section 7.5.8.

7.6.6 Re-instatement of Capping

Following completion of any future excavation works, a thorough visual inspection of the work area shall be undertaken by a suitably qualified person to ensure all visible signs of ACM have been removed.

On completion of this visual inspection, the complete area shall again be sprayed with water and re-capped in accordance with the requirements of Sections 7.5.13 and 7.5.14

7.6.7 Sampling & Analysis

Any future sampling and analysis for asbestos shall be undertaken in accordance with the requirements of Section 7.5.12, and conducted by a NATA accredited laboratory.

7.6.8 Decontamination of Plant and Equipment

Provided the plant is positioned on clean fill/material at all times decontamination of plant and machinery will not be required; however, if this is not the case, decontamination of plant and machinery will occur in accordance with Section 7.5.19.

7.7 Emergency Response Procedures

An emergency situation would likely entail a scenario where ACM present on site has been inadvertently disturbed or friable asbestos detected (for the first time), which is likely to release respirable fibres on-site and to the immediate receiving environment. Whether through actions of site personnel, contractors, or machinery operating in ACM impacted area, BAC and/or its nominated contractor shall be notified immediately and all work cease until the site has been cleared of ACM and/or remediated by a suitably qualified person. Emergency response procedures are detailed in the flow chart in Figure 2 (attached).

8.0 REPORTING

8.1 Site Remediation

Detailed records of any remediation and validation activities undertaken on the future Auto Mall Precinct or associated works are to be maintained such that all activities relating to asbestos matters, site monitoring and final validation undertaken are recorded.

Reporting and record keeping is to be in accordance with the BAC Corporate Standard for Asbestos (Appendix B).

As a minimum, site records shall include:

- any temporary in-situ asbestos management measures employed;
- extent of site clearing activities and general earthworks;
- records of any/all capping works and inspections;
- all asbestos fibre air quality (dust) monitoring results; and
- records of any asbestos or ACM identified or disposed of off-site.

A report is to be compiled detailing any/all remediation activities and final validation (if undertaken) at the completion of remediation works and submitted to BAC for review.

As a minimum the report shall include the following:

- a brief summary of background information;
- scope of development works;
- remedial methodology adopted;
- records of all site works including photographs;
- results of all asbestos fibre air quality (dust) monitoring and soil validation sampling undertaken;
- final conclusions;
- on-going management requirements (if required); and
- Figure(s) displaying the surveyed boundary of impacted areas and final extent of capping and/or validated areas.

Where ACM is identified this management plan is to be revised outlining specific works that have been conducted and the management strategy to be put in place relating to confirmed ACM remaining on site. The management plan should be made available to all staff and contractors undertaking work within site boundaries as indicated in Figure 1.

In addition all asbestos related works and information is to be documented within BACs Asbestos Register and Management Plan, including but not limited to:

- re-inspections;
- remedial works; and
- identification of ACM.

8.2 Emergencies

All employees are to report the presence of previously unidentified ACM or suspected ACM immediately to their direct manager and BAC as soon as possible, as identified in the Emergency Response Flow Chart (Figure 2). The report form provided (Appendix C) is to be used for reporting exposure to any suspected asbestos hazard on site.

The HSE Coordinator, in consultation with the employee's immediate manager, will determine other internal or external notification required in accordance with the Emergency Response Flow Chart (Figure 2).

An incident report form is used to report all the presences of previously unidentified or suspected asbestos containing material on-site and must be completed by either the employee or Project Manager.

8.3 Complaints

Employees must report any complaints associated with the presence of previously unidentified or suspected ACM to their immediate manager as soon as practical. The Complaint Register form (in Appendix C), should be used for reporting all complaints.

The project manager will determine other internal or external notification and actions if required in accordance with Figure 2 – Emergency Response Flow Chart.

9.0 STUDY LIMITATIONS

This ACM Management Plan has been developed to manage and minimise asbestos related health risks associated with ACM if found to be present in soil disturbed on the future Auto Mall Precinct site at Brisbane Airport during earthworks or future infrastructure construction, and to provide guidance when undertaking the following procedures:

- outlining the extent of any identified ACM contamination in soil;
- providing sufficient information to allow the undertaking of a detailed site specific risk assessment regarding the identified ACM in soil at the site;
- managing the ACM during remediation works; and
- long-term site management with respect to ACM and possible future disturbance.

This plan does not include strategies for the management of any other contaminants that may be present in soils at the site, or asbestos in other areas outside the designated site boundaries (refer Figure 1).

In addition, attention is drawn to the limitations of this report which are outlined in Appendix D. The statements presented in this Limitation document are intended to advise you of what your realistic expectations of this management plan should be, and to present you with recommendations on how to minimise the risks associated with the earthworks and future infrastructure works for this project. The document is not intended to reduce the level of responsibility accepted by PSK Environmental. However, it is important that all parties who rely on this Management Plan are aware of the responsibilities that each party assumes in so doing.

10.0 CLOSURE

To date, the occurrence of ACM fragments on the surface and in soil has not been confirmed at the site.

As such, this ACM Management Plan, which has been developed to manage and minimise asbestos related health risks associated with ACM impacted soil at the future Auto Mall Precinct and any associated works, may not actually need to be implemented unless ACM is confirmed to be present in soil disturbed during excavations at the site. However, if enacted, this plan is to be implemented in full along with the recommended level of soil sampling and analysis and associated site monitoring.

APPENDIX A

EHP Compliance Alert 1/2013

Compliance alert 1/2013

The Department of Environment and Heritage Protection (EHP) uses compliance alerts to assist industry improve its compliance practices and better understand its responsibilities in achieving good environmental practices.

This also gives operators an additional opportunity to know what they need to meet their obligations. In some circumstances, taking enforcement action, such as prosecution, is in the public interest.

EHP is committed to an ongoing analysis of its enforcement activity, so that common areas of non-compliance can be identified and highlighted to relevant industry sectors with guidance as to steps they can take to improve performance and avoid enforcement action.

Functional area:

Environment

Sector:

Waste

Topic:

Transport and disposal of asbestos

Asbestos is defined as a regulated waste under the Environmental Protection Regulation 2008 and commercially transporting asbestos is regulated by environmental protection legislation. Any commercial or industrial waste that contains residues of a type of regulated waste, including asbestos is also regulated.

A person must not transport on a commercial basis, any quantity of asbestos in a vehicle unless they hold or are acting under an environmental authority.

In order to regulate the transport of asbestos and other trackable waste it is a requirement of the Environmental Protection (Waste Management) Regulation 2000 (the Regulation) that waste handlers submit waste tracking information to EHP.

The purpose of the waste tracking system is to enable EHP to track waste from its source to the place of storage, recycling, treatment or disposal. Waste tracking ensures all parties involved with managing waste take a responsible attitude towards waste management and that waste is transported and managed in a way to prevent illegal dumping which could cause, or has the potential to cause, environmental harm.

Under the Regulation, a waste transport certificate (WTC) must be completed for each load of trackable waste.

The waste transporter must:

- Carry the WTC (white, green, blue and yellow copies) with parts 1 and 2 completed with the load.
- Give the white and yellow copies of the WTC to the waste receiver.
- Keep records of the waste transport for five years (blue copy of WTC with all parts completed).
- Notify EHP of any discrepancies associated with the transaction.

The transport and disposal of asbestos or asbestos containing material (ACM) must be undertaken very carefully to prevent its exposure to the environment because of its known effect on human health.

If the source of the asbestos or ACM is a site listed either in the Environmental Management Register (EMR) or Contaminated Land Register (CLR), a disposal permit is required. A disposal permit must be obtained prior to starting extraction of materials, including contaminated soils from the site.

Case study

In June 2013, analysis of EHP waste tracking data found a number of operators had failed to provide details of an authority to transport waste. Subsequent investigations revealed that three operators were not authorised to transport waste and those operators were issued with penalty infringement notices (PIN) relating to transporting asbestos without the required approval.

To ensure operators are lawfully transporting regulated waste and providing complete and accurate tracking information, EHP will continue to undertake random audits to monitor compliance and take appropriate enforcement action when required.

A PIN can be issued to a commercial operator who unlawfully transports regulated waste in the amount of 20 penalty units, totalling $2200. The maximum penalty for a commercial operator who transports regulated waste, including asbestos without the required approval is 1665 penalty units, totalling $183,150.

Penalties also apply for failing provide complete and accurate waste tracking information.

Complying with the legislation

It is important that the waste handlers comply with the requirements of environmental protection legislation

by ensuring:

- Regulated wastes are only transported in a vehicle by a person who holds or is acting under an environmental authority.
- WTCs are completed and EHP is notified of the transport by sending copies of the WTCs to EHP within the specified timeframe.
- Disposal of regulated wastes only occurs to a place/facility with an environmental authority to receive regulated wastes.
- Those involved in the removal of asbestos must also ensure that they comply with additional obligations under the relevant legislation.

TABLE OF CONTENTS

1.0 PURPOSE

Brisbane Airport Corporation (BAC) aims to provide a work environment without risk to any person.

This includes ensuring that people are not placed at risk from exposure to asbestos in buildings, plant, structures and land controlled by BAC. The ultimate goal of the Corporation is for all of these areas to be free of asbestos materials.

The purpose of this Corporate Standard is to document the processes maintained by BAC to prevent the exposure of any person to airborne asbestos fibres while asbestos-containing materials (ACM) remain in the workplace as well as to ensure compliance with asbestos regulations.

BAC will conduct regular audits of its buildings, structures and known contaminated sites at Brisbane Airport, identifying the presence of asbestos and assessing the risk to the health and safety of people.

Where asbestos is located in leased premises, BAC will work with tenants to ensure that information is provided regarding ACM in the workplace, the risks associated and the control measures in place.

For the purpose of Chapter 8 of the *Work Health and Safety Regulation 2011* (Qld), this Corporate Standard is BAC's asbestos management plan.

2.0 SCOPE

This Corporate Standard applies to all areas of Brisbane Airport and to any maintenance or asbestos removal activities undertaken by BAC workers (including contractors).

3.0 DEFINITIONS

Term	Definition
Airborne asbestos	Any fibres of asbestos small enough to be made airborne. For the purposes of monitoring airborne asbestos fibres, only respirable fibres (i.e. fibres that are small enough to penetrate the gas exchange regions of the lungs) are counted.
Asbestos	The asbestiform varieties of mineral silicates belonging to the serpentine or amphibole groups of rock-forming minerals, including actinolite asbestos, grunerite (or amosite) asbestos (brown), anthophyllite asbestos, chrysotile asbestos (white), crocidolite asbestos (blue) and tremolite asbestos.
Asbestos-containing material (ACM)	Any material or thing that, as part of its design, contains asbestos.
Asbestos-contaminated dust or debris (ACD)	Dust or debris that has settled within a workplace and is (or assumed to be) contaminated with asbestos.
Asbestos-related work	Work involving asbestos (other than asbestos removal work) that is permitted under the exceptions set out in s419 (3), (4) and (5) of the *Work Health and Safety Regulation 2011*

	(Qld).
Asbestos removalist	A person conducting a business or undertaking who carries out asbestos removal work.
Asbestos removal work	Work involving the removal of asbestos or ACM and Class A asbestos removal work or Class B asbestos removal work as outlined in Part 8.10 of the *Work Health and Safety Regulation 2011* (Qld).
Competent person	A person who has acquired, through training, qualification or experience, the knowledge and skills to carry out the task. *Note: licensing/certification may be required for some of the tasks described in this document as requiring a competent person.*
Exposure standard (asbestos)	A respirable fibre level of 0.1 fibres/ml of air measured in a person's breathing zone and expressed as a time weighted average fibre concentration calculated over an eight-hour working day and measured over a minimum period of four hours in accordance with: • the Membrane Filter Method • a method determined by the relevant regulator.
Friable asbestos	Material that is in a powder form or that can be crumbled, pulverised or reduced to a powder by hand pressure when dry, and contains asbestos.
GHS	The *Globally Harmonised System of Classification and Labelling of Chemicals*.
In-situ asbestos	Asbestos or ACM fixed or installed in a structure, equipment or plant but does not include naturally occurring asbestos.
NATA-accredited laboratory	A testing laboratory accredited by the National Association of Testing Authorities (NATA), Australia, or recognised by NATA either solely or with someone else.
Naturally occurring asbestos (NOA)	The natural geological occurrence of asbestos minerals found in association with geological deposits including rock, sediment or soil.
Non-friable asbestos	Material containing asbestos that is not friable asbestos, including material containing asbestos fibres reinforced with a bonding compound.
Respirable asbestos	An asbestos fibre that: • is less than 3 microns (μm) wide • is more than 5 μm long • has a length to width ration of more than 3:1.

4.0 BACKGROUND

Asbestos is a naturally occurring mineral fibre that was widely used in structures such as buildings, processing plants, ships, trains and motor vehicles in the 1950's, 1960's and 1970's. Its extensive use was due to the versatility of the product, which withstands heat, erosion and decay, and has fire and water resistant properties. The most commonly found building materials that contain asbestos are asbestos cement products.

Whilst the use of all forms of asbestos was banned across Australia on 31 December 2003, ACM are still present in a large number of older buildings.

When asbestos is contained in a bonded form, maintained in a good condition and left alone, it presents no health risks. Asbestos is only a health risk if asbestos fibres are released into the air and inhaled. Common work situations in which fibres may be disturbed and released into the air include building and maintenance related activities such as:

- Flooring maintenance and installation;
- Air-conditioning maintenance and installation;
- Electrical, plumbing and hydraulic systems maintenance and installation;
- Building renovation and maintenance work such as replacement or repair of wall and ceiling linings;
- Demolition;
- Painting and coating/sealing of ACM; and
- Removal and disposal of asbestos.

The *Work Health and Safety Regulation 2011* (Qld), Workplace Health and Safety Queensland (WHSQ) *How to Manage and Control Asbestos in the Workplace Code of Practice 2011* and the WHSQ *How to Safely Remove Asbestos Code of Practice 2011* all provide regulated guidance in controlling asbestos-related risks in the workplace. Any works carried out on ACM must adhere to this legislation.

4.1 Risks associated with exposure to airborne asbestos fibres

Asbestos is a carcinogen and the inhalation of asbestos fibres is known to cause mesothelioma, lung cancer and asbestosis.

Mesothelioma is a rare type of cancer that forms on the mesothelium, a protective tissue that lines several of the body's internal organs (lungs, abdomen, heart and reproductive organs).

Exposure to asbestos is almost exclusively responsible for the development of mesothelioma. It is caused by the inhalation of asbestos fibres deep into the lungs where they can damage mesothelial cells, potentially resulting in cancer. The latency period is generally between 35 and 40 years, but may be longer, and the disease is very difficult to detect prior to the onset of illness.

Mesothelioma was once rare, but its incidence is increasing throughout the industrial world as a result of past exposures to asbestos. Australia has the highest incidence rate in the world. There is no cure for mesothelioma.

Lung cancer has been shown to be caused by all types of asbestos. The average latency period of the disease, from the first exposure to asbestos, ranges from 20 to 30 years. Lung cancer symptoms are rarely felt until the disease has developed to an advanced stage.

Asbestosis is a form of lung disease (pneumoconiosis) directly caused by inhaling asbestos fibres, causing a scarring (fibrosis) of the lung tissue. The continual creation of scar tissue causes the walls of the lungs' air sacs to thicken, reducing the lungs' capacity to take in oxygen and remove carbon dioxide. The latency period of asbestosis is between 15 and 25 years.

Asbestos poses a risk to health by inhalation whenever asbestos fibres become airborne and people are exposed to these fibres.

ACM can release asbestos fibres into the air whenever they are disturbed, and especially during the following activities:

- Any direct action on ACM, such as drilling, boring, cutting, filing, brushing, grinding, sanding, breaking, smashing or blowing with compressed air;
- The inspection or removal of ACM from workplaces (including vehicles, plant and equipment);
- The maintenance or servicing of materials from vehicles, plant, equipment or workplaces; or
- The renovation or demolition of buildings containing ACM.

Non-friable ACM that has been subjected to extensive weathering or deterioration also has a higher potential to release asbestos fibres into the air.

5.0 SPECIFIC REQUIREMENTS

5.1 Asbestos register and identification

Identifying asbestos or ACM is the first step in managing exposure to asbestos in the workplace.

Asbestos identification is undertaken by competent persons engaged by BAC. Where there is any uncertainty as to whether asbestos is present in any part of a structure, item of plant or land site, BAC will either arrange sampling and testing or will make an assumption as to the presence of asbestos. Any assumption that asbestos is not present will be made based on a number of factors including, but not limited to:

- Date of construction;
- Building materials; and
- Previous records regarding asbestos removal.

If it is assumed that asbestos is present, all requirements for managing asbestos will be followed, such as inclusion on the Asbestos Register and appropriate treatment actions (e.g. signage).

A competent person may also identify inaccessible areas that are likely to contain asbestos or ACM (e.g. inside fire doors, linings of pressure vessels, enclosed riser shafts, air-conditioning ducts, etc). In this situation, asbestos will be assumed to be present until such time as access to the area allows for sampling and testing to be undertaken (e.g. during maintenance).

BAC has developed an Asbestos Register, which contains information regarding ACM located in BAC buildings and other structures, as well as contaminated land sites where ACM has been identified. This Register is reviewed following any review of this Standard; or where further asbestos or ACM is identified; or where asbestos is removed from, disturbed, sealed, or enclosed at, the workplace; or otherwise at least once every five years. The Register is available on the BAC intranet. Information from this Register must be provided (as appropriate) to any contractors performing works in areas where asbestos or ACM is known to be present. Relevant information from the Register is also to be provided to tenants in BAC controlled buildings.

5.2 Labelling and signage

All identified or assumed asbestos, including where the asbestos is inaccessible, must be clearly indicated through labelling or signage.

5.2.1 Labels

If labels can be used, a competent person will determine the number and position of the labels required. The location of labels should be consistent with the location listed in the asbestos register.

If a risk assessment suggests asbestos may be disturbed or people are likely to be exposed and it is not reasonably practicable to label asbestos directly, a prominent warning sign must be posted in its immediate vicinity (e.g. if floor tiles have been identified as containing asbestos, an appropriate warning sign may be displayed on an adjacent wall).

5.2.2 Warning signs

All warning signs must comply with AS 1319 *Safety Signs for the Occupational Environment.*

Any areas of a workplace that contain asbestos, including plant, equipment and components, should have warning signs affixed to ensure the asbestos is not unknowingly disturbed without the correct precautions being taken. Signs will be weatherproof, constructed of light-weight material and adequately secured. Signs should be placed at all the main entrances to the work areas and land where asbestos is present.

5.2.3 Examples of labels and warning signs

Examples of warning signs and labels are shown below:

Source: WHSQ How to Manage and Control Asbestos in the Workplace Code of Practice 2011

Where direct marking of asbestos is not possible, the presence and location of asbestos must be communicated to workers (such as plumbers, electricians, etc) before commencement of work. BAC's Permit to Work system facilitates this.

5.3 Asbestos-contaminated soil

Under the *Work Health and Safety Regulation 2011* (Qld) work involving asbestos-contaminated soil is not prohibited where a competent person has determined that asbestos-contaminated soil does not contain any visible ACM or friable asbestos, or if friable asbestos is visible – it does not contain more than trace levels of asbestos determined in accordance with AS 4964:2004 *Method for the qualitative identification of asbestos in bulk samples*.

Where asbestos-contaminated soil contains visible ACM or friable asbestos exceeding trace levels, the work activities associated with sampling, identification, maintenance, management, removal or disposal of the asbestos or ACM are permitted only in accordance with the WHS Regulations and this Corporate Standard.

In addition, where BAC has determined that asbestos or ACM is present or has made an assumption that it is likely to be present, works may only be carried out in accordance with this Corporate Standard.

The management of asbestos-contaminated soil controlled by BAC is undertaken collaboratively by BAC's WHS and Environment work teams. At present, management of these sites is carried out in accordance with State legislative requirements as well as the

"Guidelines for the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia" (version May 2009).

5.4 Controlling asbestos risks

BAC adopts the hierarchy of control in managing WHS risks, including those associated with asbestos and ACM. The ultimate goal is to have a workplace free from asbestos, however in choosing the most appropriate control measure, BAC considers a number of factors including:

- The current condition of the asbestos or ACM;
- Current controls in place at the location;
- The likelihood of the asbestos or ACM being disturbed; and
- Current and future uses of the location.

Based on a determination of the risks associated, and in consideration of specific environmental requirements for managing asbestos-contaminated sites, one or more of the controls below may be used by BAC.

5.4.1 Removal

BAC will remove asbestos or ACM that has been identified in structures or plant that will be demolished or where there is the potential for the asbestos or ACM to be disturbed by frequent maintenance works. BAC will also ensure, so far as is reasonably practicable, that asbestos or ACM is removed before refurbishment of a structure or plant. In addition, BAC will remove any asbestos or ACM that is weathered, damaged or broken.

Friable asbestos – if asbestos is friable and it has been determined that it should be removed, BAC will arrange removal by a Class A licensed removalist as soon as reasonably practicable.

Non-friable asbestos – if asbestos is non-friable, is more than 10m² and it has been determined that it should be removed, BAC will arrange removal by a licensed asbestos removalist as soon as reasonably practicable. Where it is not reasonably practicable to remove it immediately, control measures will be put in place to eliminate or minimise exposure.

5.4.2 Enclosure

If it is not reasonably practicable to remove asbestos, BAC's preferred alternative control is enclosure. This is the creation of a structure built around the asbestos so that it is completely covered to prevent exposure of the asbestos to air and other substances.

Regular inspections must be undertaken by a competent person to monitor the condition of enclosed asbestos or ACM as well as the efficacy of the control measure.

5.4.3 Encapsulation and Sealing

If it is not reasonably practicable to remove or enclose asbestos or ACM, encapsulation or sealing is the next appropriate control measure.

Encapsulation is carried out using a resilient matrix (such as plastic, vinyl, resin, cement, etc.) that seals loose fibres into place. BAC will only use this method of control where the original asbestos bond is still intact and where it would create a greater risk to remove the asbestos.

Encapsulation of asbestos-contaminated soil is undertaken on a case by case basis in consultation with the WHS and Employee Relations Manager and the Environment Manager.

Sealing involves covering the surface of the material with a protective coating to prevent exposure to airborne asbestos. Sealing is the least effective method of control for the release of airborne asbestos and BAC uses this as an interim control until a more effective form of control can be implemented.

5.5 Working on or near asbestos

The *Work Health and Safety Regulation 2011* (Qld) and the WHSQ *How to Manage and Control Asbestos in the Workplace Code of Practice 2011* provide detailed information on requirements for people who performing work on asbestos or ACM. Work on ACM includes maintenance, cleaning and repair activities that have the potential to disturb ACM and release fibres into the atmosphere.

5.5.1 Planning work

In planning for the conduct of work activities, the BAC Works Manager must identify whether asbestos risks may exist for the particular task by consulting the Asbestos Register. If no ACM has been identified or assumed to be present, the work can continue in accordance with the applicable work procedure.

If ACM has been identified or assumed to be present, the contractor must apply for a high risk activity permit (Asbestos Permit) to carry out the work.

5.5.2 Performing work

The BAC Works Manager must ensure that no work is performed on or near ACM without a current and approved Asbestos Permit.

Work performed on or near ACM must be reported to the WHS and Employee Relations Manager to ensure the asbestos register is kept up-to-date.

5.5.2.1. Asbestos Permit to Work

The asbestos permit is designed to ensure appropriate work practices are employed by BAC contractors in the vicinity of ACM. The Permit documents what ACM is to be removed, encapsulated or otherwise protected prior to the works proceeding. The Asbestos Permit also indicates other requirements such as the need for personal protective equipment (PPE), barricading and airborne fibre monitoring.

An Asbestos Permit will only be issued to competent workers.

5.5.2.2. Asbestos removal work

Detailed obligations regarding the removal of asbestos are documented in the WHSQ How to Safely Remove Asbestos Code of Practice 2011. Specific requirements of BAC Works Managers in managing this particular work activity are outlined further below.

Asbestos removal control plan

The WHS Regulations require licensed asbestos removalists to prepare an asbestos removal control plan for any licensed asbestos removal work they are commissioned to undertake. The asbestos removal control plan should be prepared in consultation with BAC, workers and health and safety representatives.

A copy of the asbestos removal control plan must be provided to the BAC Works Manager and must also be readily available to any workers and other businesses in the vicinity of the works.

The BAC Works Manager must review the asbestos removal control plan in accordance with, and prior to issuing, an Asbestos Permit.

Notification to the regulator

A licensed asbestos removalist must notify WHSQ in writing at least five days before commencement of work. WHSQ Form 65 (Notification of licensed asbestos removal work) is used for this purpose.

In limited circumstances removal work may commence immediately. In these situations, the licensed asbestos removalist must notify WHSQ by telephone and follow up in writing within 24 hours.

BAC Works Managers must confirm this notification has occurred by ensuring a copy of the notification has been attached to the contractor's application for an Asbestos Permit.

Access, signage and barricading

Where BAC has commissioned asbestos removal work, the BAC Works Manager must ensure that access to the removal area is limited to:

- Workers who are engaged to carry out the removal work;
- Other people associated with the removal work;
- People permitted by law to be in the asbestos removal area (e.g. WHSQ Inspectors, emergency service workers).

A combination of signs and barricades may be necessary to limit access. The person carrying out the removal work must erect signs to indicate where the asbestos removal work is being carried out as well as barricades to delineate the asbestos area.

Clearance inspection

The BAC Works Manager must arrange for a clearance inspection to be carried out after licenced asbestos removal work has been completed. The clearance certificate must be issued before the workplace can be re-occupied. A clearance certificate can only be carried out by:

- An independent licensed asbestos assessor, for work that must be carried out by a Class A licensed asbestos removalist;
- An independent competent person, for asbestos work that is not required to be carried out by a Class A licensed asbestos removalist.

To be "independent", the licensed asbestos assessor or competent person must not be involved in the removal of asbestos for that specific job and must not be involved in a business or undertaking involved in the removal of the asbestos for that specific job.

A copy of the clearance certificate must be obtained and forwarded to the WHS and Employee Relations Manager to allow the Asbestos Register to be reviewed.

Air monitoring

Air monitoring requirements will vary based on the type of asbestos being removed, the location and position (including whether the asbestos is within a building or outside). BAC Works Managers must consider the following requirements in determining the acceptability of an asbestos removal plan and before issuing an Asbestos Permit for asbestos removal works:

Removal work type	Air monitoring requirement
Friable asbestos removal	Mandatory (required by law).
More than 10m² of non-friable asbestos removal	Not mandatory, but may be considered to eliminate or minimise exposure to airborne asbestos.
Public location	Air monitoring should be considered where asbestos removal work is being undertaken in or next to a public location.

The BAC Works Manager must ensure any results from air monitoring are given to workers at the workplace, HSR's, other businesses and other persons at the workplace.

5.5.2.3. Asbestos-related work

Asbestos-related work (including maintenance/service work, management of in-situ asbestos and sampling/identification) may only be carried out if certain requirements are met. Section 3 of the Asbestos Permit outlines the specific requirements for asbestos-related work.

The permit application must have a Safe Work Method Statement (SWMS) attached that is specific to the work being undertaken and meets the minimum requirements outlined in Section 3 of the Asbestos Permit.

Where a BAC employee is performing work on or near ACM, the work group supervisor must ensure that a documented SWMS is prepared and approved for the activity and that adherence to the SWMS is monitored.

5.6 Asbestos incident processes

Incidents relating to asbestos or ACM are to be recorded, investigated and documented in accordance with BAC's WHS Incident Management and Investigation Procedure.

5.6.1 Emergency situations

Where friable ACM is disturbed and creates an immediate risk to the health of workers, visitors and/or members of the public, the following actions are to be taken:

1. First responder/person on site will evacuate all people from the location;
2. First responder/person on site will seal off or otherwise isolate the area;
3. First responder/person on site will advise the WHS and Employee Relations Manager;
4. First responder/person on site will institute access restriction procedures;
5. The WHS and Employee Relations Manager (in consultation with the Building Facilities Manager and, in the case of land contamination, the Environment Manager) will determine "clean-up" or other remedial action, and engage licenced asbestos removalists where required;
6. Engaged competent persons will undertake appropriate remedial action followed by air monitoring to determine no remaining exposure;
7. Workers and other persons will not be permitted to re-enter the work area until a competent person has provided clearance.
8. The WHS and Employee Relations Manager (in consultation with the Building Facilities Manager and/or the Environment Manager) will update the Asbestos Register as appropriate.

5.6.2 Discovery of suspected asbestos or ACM not previously identified

Where potential asbestos or ACM is discovered in an area not previously identified as containing these, and where there is no immediate risk to the health and wellbeing of workers or others, the following actions are to be taken:

1. Person discovering the suspected asbestos or ACM must immediately contact the WHS and Employee Relations Manager;
2. The WHS and Employee Relations Manager will notify the Buildings Facilities Manager and, in the event of land contamination, the Environment Manager;
3. The person making the discovery must isolate the area by erecting barriers or otherwise ensuring access to the area is restricted;
4. The WHS and Employee Relations Manager (in consultation with the Buildings Facilities Manager and/or the Environment Manager) will arrange for the material to be sampled and analysed by a NATA-accredited laboratory. (Note: in the case of a Principal Contractor controlled site, this will be arranged by the Principal Contractor in consultation with BAC);
5. Following receipt of the results, the WHS and Employee Relations Manager, Building Facilities Manager and, in the event of land contamination, the Environment Manager will determine appropriate remedial actions and ensure competent persons are engaged (as applicable) to undertake these;

6. Following completion of the remedial actions and receipt of any clearance certificates, the WHS and Employee Relations Manager (in consultation with the Building Facilities Manager and/or the Environment Manager) will review and revise the Asbestos Register.

5.6.3 Building or work site evacuation during asbestos work

During the course of asbestos work, external events may necessitate a full or partial evacuation of a building or work site. These events may include, but are not limited to:

- Fire evacuation;
- Security breach or threat;
- Aviation safety incident; or
- Chemical spill/contamination.

Decontamination procedures can be temporarily waived in the event of an emergency event requiring evacuation of a building or work site. This should be based on an informal risk assessment conducted at the time by the persons in control of the work activities (generally the specialist contractor). If evacuation is deemed to be required, the following actions must be taken:

1. Workers involved in asbestos work must evacuate to the nominated evacuation assembly point but remain downwind to ensure any fibres remaining on clothes (as a result of not decontaminating completely) do not enter the breathing space of others.
2. On arriving at the assembly point, workers must notify emergency wardens of the status of work and the assessed level of risk associated as well as the level of risk associated with asbestos workers not undergoing the complete decontamination process.

5.7 Principal Contractor Works

Due to the nature of the risks involved with asbestos and ACM, the management processes set out in this Corporate Standard apply to all contracted work activities, including where a principal contractor has been engaged to perform the work.

BAC Works Managers must provide relevant extracts from the Asbestos Register to the Principal Contractor, who must ensure that appropriate controls are incorporated into the work health and safety management plan (WHSMP) for the construction project.

In accordance with BAC's Contractor Management Corporate Standard, the WHSMP must be reviewed and accepted by BAC (with involvement from BAC's WHS and Environment teams where known or potential asbestos or ACM contamination has been identified as a risk).

The emergency processes relating to asbestos/ACM outlined in this Corporate Standard must be included in the WHSMP.

Where asbestos/ACM contamination is identified on site during works, control and/or remediation activities are to be undertaken only as approved by BAC as evidenced by the issue of a Permit to Work for the remediation activities.

6.0 TRAINING and AWARENESS

BAC workers (in particular Works Managers, operational staff and contractors who may come into contact with ACM or be required to coordinate removal of, or works on or near, asbestos or ACM) will receive general training regarding asbestos and ACM and be informed of the locations where these are known or assumed to present as well as health risks associated with exposure to airborne asbestos fibres. Initial training and ongoing refresher training will also cover hazards associated with asbestos and ACM and BAC's procedures for managing these.

All persons engaged by BAC to carry out asbestos removal works, or to conduct work on or near asbestos are required to be trained and competent (e.g. appropriately licenced) to be able to carry out the specific type of asbestos work to be undertaken. BAC Works Managers will require evidence of competency to be provided by contractors before an Asbestos Permit will be issued. In addition, persons carrying out works on or near asbestos or ACM or conducting any earthworks at Brisbane Airport (including Principal Contractors and their workers) must complete the Asbestos module of BAC's contractor induction program.

7.0 RESPONSIBILITIES

BAC Senior Managers

- Ensure adequate resources (time, equipment and personnel) are allocated for the effective implementation of this Corporate Standard.

BAC WHS and Employee Relations Manager

- Maintain the currency and accuracy of this Corporate Standard, and the associated Asbestos Register, reflective of legislative requirements and BAC needs.
- Liaise with the Buildings Facilities Manager and Environment Manager in relation to management of asbestos and ACM at Brisbane Airport.
- Ensure the audit and review activities specified within this Corporate Standard are undertaken and any identified non-compliances addressed.

BAC Works Managers

- Ensure asbestos-related works are carried out in accordance with this Corporate Standard.

BAC Property Managers

- Advise the WHS and Employee Relations Manager or Buildings Facilities Manager on expiry of a tenant's lease, where control of a building or site will revert to BAC.

8.0 REVIEW DATE

This Corporate Standard will be reviewed and updated:

- at least every five years; or
- when there is a review of the asbestos register or control measure; or
- asbestos is removed from, or disturbed, sealed or enclosed at, the workplace; or
- the plan is no longer adequate for managing asbestos or ACM at the workplace; or
- if requested by a health and safety representative; or
- where control of a building or site reverts back to BAC (e.g. on expiry of lease); or
- otherwise as required to reflect changes in legislation, BAC's risk profile or operational needs.

Study Limitations

LIMITATIONS

This Document has been provided by PSK Environmental Pty Ltd ("PSK") subject to the following limitations:

This Document has been prepared for the particular purpose outlined in our proposal and no responsibility is accepted for the use of this Document, in whole or in part, in any other contexts or for any other purpose. The scope and the period of PSK's Services are as described in PSK's proposal, and are subject to restrictions and limitations. PSK did not perform a complete assessment of all possible conditions or circumstances that may exist at the site referenced in the Document. If a service is not expressly indicated, do not assume it has been provided. If a matter is not addressed, do not assume that any determination has been made by PSK in regards to it.

Conditions may exist which were undetectable given the limited nature of the enquiry PSK was retained to undertake with respect to the site. Variations in conditions may occur between investigatory locations, and there may be special conditions pertaining to the site which have not been revealed by the investigation and which have not therefore been taken into account in the Document. Accordingly, additional studies and actions may be required.

In addition, it is recognised that the passage of time and changes to Government regulations may affect the information and assessment provided in this Document. PSK's opinions are based upon information that existed at the time of the production of the Document. It is understood that the services provided allowed PSK to form no more than an opinion of the actual conditions of the site at the time the site was visited and cannot be used to assess the effect of any subsequent changes in the quality of the site, or its surroundings, or any laws or regulations.

Where data supplied by the client or other external sources, including previous site investigation data, have been used, it has been assumed that the information is correct unless otherwise stated. No responsibility is accepted by PSK for incomplete or inaccurate data supplied by others.

Any assessment(s) made in this Document are based on the conditions indicated from published sources and the investigation described. No warranty is included, either express or implied, that the actual conditions will conform exactly to the assessments contained in this Document.

PSK may have retained sub-consultants affiliated with PSK to provide Services for the benefit of PSK. To the maximum extent allowed by law, the Client acknowledges and agrees it will not have any direct legal recourse to, and waives any claim, demand, or cause of action against, PSK's affiliated companies, and their employees, officers and directors.

This Document is provided for sole use by the Client and is confidential to it and its professional advisers. No responsibility whatsoever for the contents of this Document will be accepted to any person other than the Client. Any use which a third party makes of this Document, or any reliance on or decisions to be made based on it, is the responsibility of such third parties. PSK accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions based on this Document.

Assessment of conservation significant species

Table 1 Likelihood of conservation significant flora occurring within the Project site

Scientific name	Common name	Conservation status		Source of record	Likelihood of occurrence
		NC Act	EPBC Act		
Arthraxon hispidus	Hairy-joint Grass	Vulnerable	Vulnerable	EPBC Protected Matters Search	**Unlikely**. Preferred habitat in the form of fresh water wetlands is generally absent from this location.
Bosistoa transversa	Three-leaved Bosistoa, Yellow Satinheart	Least concern	Vulnerable	EPBC Protected Matters Search	**Unlikely**. Preferred habitat of rainforest and closed forest is absent from this location.
Cryptocarya foetida	Stinking Cryptocarya, Stinking Laurel	Vulnerable	Vulnerable	EPBC Protected Matters Search	**Unlikely**. Preferred habitat of rainforest and closed forest is absent from this location.
Dichanthium setosum	Bluegrass	Least concern	Vulnerable	EPBC Protected Matters Search	**Unlikely**. Preferred habitat in the form of basalt derived fertile “black-soils” is absent from this location
Macadamia integrifolia	Macadamia Nut, Queensland Nut Tree, Smooth-shelled Macadamia, Bush Nut, Nut Oak	Vulnerable	Vulnerable	EPBC Protected Matters Search	**Unlikely**. Preferred habitat of rainforest and closed forest is absent from this location.
Macadamia tetraphylla	Rough-shelled Bush Nut, Macadamia Nut, Rough-shelled Macadamia, Rough-leaved Queensland Nut	Vulnerable	Vulnerable	EPBC Protected Matters Search	**Unlikely**. Preferred habitat of rainforest and closed forest is absent from this location.
Phaius australis	Lesser swamp-orchid	Endangered	Endangered	EPBC Protected Matters Search	**Unlikely**. Suitable habitat in the form of freshwater wetlands dominated by *Melaleuca quinquenervia* is absent from this location.
Samadera bidwillii	Quassia	Vulnerable	Vulnerable	EPBC Protected Matters Search	**Unlikely**. Preferred habitat of rainforest and closed forest is absent from this location.

Scientific name	Common name	Conservation status		Source of record	Likelihood of occurrence
		NC Act	EPBC Act		
Thesium australe	Austral Toadflax, Toadflax	Vulnerable	Vulnerable	EPBC Protected Matters Search	**Unlikely**. Suitable habitat in the form of basalt derived “black-soils” and suitable host species (ie *Dichanthium sericium* and *Themeda triandra*) are not present in sufficient numbers to provide habitat for this species.

Table 2 Likelihood of conservation significant fauna occurring within the Project site

Scientific name	Common name	Conservation status		Source of record	Likelihood of occurrence
		NC Act	EPBC Act		
Birds					
Anthochaera phrygia	Regent honeyeater	Endangered	Critically endangered	EPBC Protected Matters Search	**Unlikely**. The preferred habitat and foraging trees are absent from this location. The site is dominated by *Casuarina glauca* which do not provide habitat for this species.
Botaurus poiciloptilus	Australasian bittern	Least concern	Endangered	EPBC Protected Matters Search	**Possible**. Areas containing *Phragmites* and *Typha* associated with freshwater wetland areas have potential to provide habitat for this species.
Charadrius mongolus	Lesser sand plover	Special least concern	Endangered	Wildlife Online	**Unlikely**. Preferred habitat of tidal mudflats and sandflats is generally absent from this location.
Calidris ferruginea	Curlew sandpiper	Special least concern	Critically endangered	Wildlife Online, EPBC Protected Matters Search	**Unlikely**. Preferred habitat of tidal mudflats and sandflats is generally absent from this location.
Calidris canutus	Red knot	Special least concern	Endangered	Wildlife Online	**Possible**. Preferred habitat of marine wetlands and salt marsh is present at this location
Dasyornis brachypterus	Eastern bristlebird	Endangered	Endangered	EPBC Protected Matters Search	**Unlikely**. Preferred habitat of dense heath, woodland or tea-tree is absent from this location
Erythrotriorchis radiatus	Red goshawk	Vulnerable	Vulnerable	EPBC Protected Matters Search	**Unlikely**. Preferred habitat of open forest, woodland and rainforest margins is absent from this location.
Geophaps scripta scripta	Squatter Pigeon (southern)	Vulnerable	Vulnerable	EPBC Protected Matters Search	**Unlikely**. The site is located outside of the species known distribution and does not contain grasses that would provide a food source for this species.
Lathamus discolor	Swift parrot	Endangered	Critically endangered	EPBC Protected Matters Search	**Unlikely**. The site does not contain suitable food species (ie flowering eucalypts) in sufficient densities to act as habitat for this species.
Limosa lapponica baueri	Western Alaskan bar-tailed godwit	Special least concern	Vulnerable	Wildlife Online, EPBC Protected Matters Search	**Possible**. Preferred habitat of marine wetlands and salt marsh is present at this location.
Numenius madagascariensis	Eastern curlew	Vulnerable	Critically endangered	Wildlife Online, EPBC Protected Matters Search	**Possible**. Preferred habitat, in the form of mangroves, saltmarshes and estuarine wetlands, is present at this location.
Pachyptila turtur sub-antarctica	Fairy Prion (southern)	Least concern	Vulnerable	EPBC Protected Matters Search	**Unlikely**. This is a marine species that only returns to land to nest. Suitable nesting sites are not present at this location.

Scientific name	Common name	Conservation status		Source of record	Likelihood of occurrence
		NC Act	EPBC Act		
Poephila cincta cincta	Southern Black-throated Finch	Endangered	Endangered	EPBC Protected Matters Search	**Unlikely**. Suitable habitat, in the form of grassy scrubland and woodland near fresh water, is absent from this location.
Rostratula australis	Australian painted snipe	Vulnerable	Endangered	EPBC Protected Matters Search	**Possible**. Preferred habitat, in the form of well vegetated shallows and margins of wetlands, is present at this location.
Turnix melanogaster	Black-breasted Button-quail	Vulnerable	Vulnerable	EPBC Protected Matters Search	**Unlikely**. Preferred habitat, in the form of rainforest or vine thickets, is absent from this location.
Reptiles					
Delma torquata	Adorned delma, Collared delma	Vulnerable	Vulnerable	EPBC Protected Matters Search	**Unlikely**. Preferred habitat, in the form of areas dominated by broad-leaved ironbark with a native grassy understory with small surface rocks, is absent from this location.
Saiphos reticulatus	Three-toed snake-tooth skink	Least concern	Vulnerable	EPBC Protected Matters Search	**Unlikely**. Preferred habitat of this species consists of rainforest and vine scrub, which is absent from this location.
Mammals					
Chalinolobus dwyeri	Large-eared pied bat, Large pied bat	Vulnerable	Vulnerable	EPBC Protected Matters Search	**Unlikely**. Preferred habitat, in the form of sandstone cliffs and fertile woodland valleys, is absent from this location.
Dasyurus hallucatus	Northern Quoll, Digul	Least concern	Vulnerable	EPBC Protected Matters Search	**Unlikely**. Preferred habitat, in the form of rocky areas associated with vine thickets or open forest, was not present within the Project site.
Dasyurus maculatus maculatus (SE mainland population)	Spot-tailed Quoll, Spotted-tail Quoll, Tiger Quoll (south-eastern mainland population)	Vulnerable	Endangered	EPBC Protected Matters Search	**Unlikely**. Preferred habitat, in the form of rocky areas associated with vine thickets or open forest, was not present within the Project site.
Petauroides volans	Greater glider	Least concern	Vulnerable	EPBC Protected Matters Search	**Unlikely**. Preferred habitat trees in the form of *Eucalyptus*, *Lophostemon* and *Corymbia* are relatively rare at this location. In addition, hollows suitable to act as a refuge for this species were not observed at this location.
Phascolarctos cinereus	Koala	Vulnerable	Vulnerable	Wildlife Online, EPBC Protected Matters Search	**Unlikely**. Preferred habitat trees in the form of *Eucalyptus*, *Lophostemon* and *Corymbia* are relatively rare at this location.
Pteropus poliocephalus	Grey-headed flying-fox	Least concern	Vulnerable	Wildlife Online, EPBC Protected Matters Search	**Possible**. This species may browse on flowering eucalypts and melaleuca species located within and adjacent to the Project site. No camp of this species were identified the Project site.

Scientific name	Common name	Conservation status		Source of record	Likelihood of occurrence
		NC Act	EPBC Act		
Xeromys myoides	Water mouse, False water rat, Yirrkoo	Vulnerable	Vulnerable	EPBC Protected Matters Search	**Possible**. Preferred habitat, in the form of extensive areas of mangroves, was present with the Project site. However, freshwater drains leading into large areas of Yellow mangroves, which are the preferred habitat of this species, were not observed. In addition, no evidence of “mounds” of middens of this species were identified onsite.

Appendix I
Flora and fauna species list

Appendix I

Observed flora and fauna species

Table 1 Flora species identified within the Project site during field investigations

Family	Scientific name	Common name	NC Act status	EPBC status	Comments
Aizoaceae	*Tetragonia tetragonoides*	New Zealand spinach	Least concern	Not listed	Marine species
Anacardiaceae	*Schinus terebinthifolius*	Broad-leaved pepper	Not listed	Not listed	Non-native, Schedule 2 plant
Apiaceae	*Centella asiatica*	Centella	Least concern	Not listed	
Apocynaceae	*Parsonsia straminea*	Monkey rope	Least concern	Not listed	
Araliaceae	*Schefflera actinophylla*	Umbrella tree	Least concern	Not listed	
Asparagaceae	*Asparagus aethiopicus*	Basket asparagus fern	Not listed	Not listed	Non-native, Schedule 2 plant
Asparagaceae	*Asparagus plumosus*	Feathered asparagus fern	Not listed	Not listed	Non-native, Schedule 2 plant
Asteraceae	*Acanthospermum hispidum*	Star burr	Not listed	Not listed	Non-native
Asteraceae	*Ambrosia artemisiifolia*	Annual ragweed	Not listed	Not listed	Non-native, Schedule 2 plant
Asteraceae	*Baccharis halimifolia*	Groundsel bush	Not listed	Not listed	Non-native, Schedule 2 plant
Asteraceae	*Conyza canadensis*	Fleabane	Not listed	Not listed	Non-native
Asteraceae	*Pseudognaphalium luteoalbum*	Jersey cudweed	Least concern	Not listed	
Asteraceae	*Sigesbeckia orientalis*	Indian weed	Least concern	Not listed	
Avicenniaceae	*Avicennia marina*	Grey managrove	Least concern	Not listed	Marine species
Bignoniaceae	*Dolichandra unguis-cati*	Cat's claw creeper	Not listed	Not listed	Non-native, Schedule 2 plant
Caryophyllaceae	*Stellaria media*	Chickweed	Not listed	Not listed	Non-native
Casuarinaceae	*Casuarina glauca*	Swamp she-oak	Least concern	Not listed	Marine species
Chenopodiaceae	*Einadia hastata*	Berry saltbush	Least concern	Not listed	Marine species
Chenopodiaceae	*Enchylaena tomentosa*	Ruby saltbush	Least concern	Not listed	Marine species
Chenopodiaceae	*Suaeda arbusculoides*	Jelly-bean plant	Least concern	Not listed	Marine species
Convolvulaceae	*Ipomoea cairica*	Mile-a-minute	Not listed	Not listed	Non-native
Cyperaceae	*Baumea rubiginosa*	Soft twigrush	Least concern	Not listed	

Family	Scientific name	Common name	NC Act status	EPBC status	Comments
Euphorbiaceae	*Macaranga tanarius*	Macaranga	Least concern	Not listed	
Euphorbiaceae	*Ricinus communis*	Castor oil bush	Not listed	Not listed	Non-native
Fabaceae	*Macroptilium atropurpureum*	Siratro	Not listed	Not listed	Non-native
Fabaceae	*Macroptilium lathyroides*	Phus pea	Not listed	Not listed	Non-native
Fabaceae	*Sesbania cannabina*	Sesbania pea	Least concern	Not listed	
Hemerocallidaceae	*Dianella caerulea*	Blue flax lily	Least concern	Not listed	
Malvaceae	*Hibiscus tiliaceus*	Cotton tree	Least concern	Not listed	
Malvaceae	*Sida cordifolia*	Flannel weed	Not listed	Not listed	Non-native
Malvaceae	*Sida hackettiana*	Sida	Least concern	Not listed	
Malvaceae	*Sida rhombifolia*	Paddy's Lucerne	Not listed	Not listed	Non-native
Mimosaceae	*Acacia leiocalyx*	Black wattle	Least concern	Not listed	
Mimosaceae	*Acacia maidenii*	Maiden's wattle	Least concern	Not listed	
Mimosaceae	*Leucaena leucocephala*	Leucaena	Not listed	Not listed	Non-native
Moraceae	*Maclura cochinchinensis*	Cockspur thorn	Least concern	Not listed	
Myrtaceae	*Corymbia tessellaris*	Moreton Bay ash	Least concern	Not listed	
Myrtaceae	*Corymbia torelliana*	Cadaghi	Least concern	Not listed	
Myrtaceae	*Eucalyptus tereticornis*	Queensland blue gum	Least concern	Not listed	
Myrtaceae	*Melaleuca leucadendra*	Broad-leaved tea-tree	Least concern	Not listed	
Myrtaceae	*Melaleuca quinquenervia*	Swamp paperbark	Least concern	Not listed	
Myrtaceae	*Melaleuca saligna*	Bottlebrush	Least concern	Not listed	
Passifloraceae	*Passiflora foetida*	Stinking passion-flower	Not listed	Not listed	Non-native
Petiveriaceae	*Rivina humilis*	Little pepper	Not listed	Not listed	Non-native
Phyllanthaceae	*Glochidion sumatranum*	Umbrella cheese tree	Least concern	Not listed	
Poaceae	*Chloris gayana*	Rhodes grass	Not listed	Not listed	Non-native
Poaceae	*Cynodon dactylon*	Couch grass	Not listed	Not listed	Non-native
Poaceae	*Eragrostis tenuifolia*	Elastic grass	Not listed	Not listed	Non-native
Poaceae	*Megathyrsus maximus*	Green panic	Not listed	Not listed	Non-native

Family	Scientific name	Common name	NC Act status	EPBC status	Comments
Poaceae	*Melinis repens*	Red natal grass	Not listed	Not listed	Non-native
Poaceae	*Paspalum vaginatum*	Saltwater couch	Least concern	Not listed	Marine species
Poaceae	*Phragmites australis*	Common reed	Least concern	Not listed	Marine species
Poaceae	*Setaria verticillata*	Whorled pigeon grass	Not listed	Not listed	
Poaceae	*Urochloa decumbens*	Signal grass	Not listed	Not listed	Non-native
Poaceae	*Urochloa mutica*	Para grass	Not listed	Not listed	Non-native
Polygonaceae	*Persicaria decipiens*	Slender knotweed	Least concern	Not listed	
Rhamnaceae	*Alphitonia excelsa*	Soap tree	Least concern	Not listed	
Rhizophoraceae	*Ceriops tagal*	Yellow mangrove	Least concern	Not listed	Marine species
Sapindaceae	*Cupaniopsis anacardioides*	Tuckeroo	Least concern	Not listed	
Solanaceae	*Solanum americanum*	Nightshade	Least concern	Not listed	
Solanaceae	*Solanum mauritianum*	Wild tobacco	Not listed	Not listed	Non-native
Solanaceae	*Solanum seaforthianum*	Brazilian nightshade	Not listed	Not listed	Non-native
Typhaceae	*Typha orientalis*	Broad-leaved cumbungi	Least concern	Not listed	
Ulmaceae	*Celtis sinensis*	Chinese elm	Not listed	Not listed	Non-native, Schedule 2 plant
Verbenaceae	*Lantana camara*	Lantana	Not listed	Not listed	Non-native, Schedule 2 plant
Verbenaceae	*Verbena litoralis*	Verbena	Not listed	Not listed	Non-native
Verbenaceae	*Verbena rigida*	Verbena	Not listed	Not listed	Non-native

Table 2 Fauna species identified within the Project site during field investigations

Family	Scientific name	Common name	NCA status	EPBC status	Comments
Birds					
Acanthizidae	*Smicrornis brevirostris*	Weebill	Least concern	Not listed	
Anatidae	*Anas castanea*	Chestnut teal	Least concern	Not listed	
Anatidae	*Anas gracilis*	Grey teal	Least concern	Not listed	
Anatidae	*Anas superciliosa*	Pacific black duck	Least concern	Not listed	
Ardeidae	*Egretta novaehollandiae*	White-faced heron	Least concern	Not listed	
Columbidae	*Phaps chalcoptera*	Common bronzewing	Least concern	Not listed	
Estrildidae	*Taeniopygia bichenovii*	Double-barred finch	Least concern	Not listed	
Meliphagidae	*Lichmera indistincta*	Brown honeyeater	Least concern	Not listed	
Meropidae	*Merops ornatus*	Rainbow bee-eater	Special least concern	Marine	Marine species
Oriolidae	*Sphecotheres vieilloti*	Australasian fig bird	Least concern	Not listed	
Phalacrocoracidae	*Microcarbo melanoleucos*	Little pied cormorant	Least concern	Not listed	
Rhipiduridae	*Rhipidura leucophrys*	Willie wagtail	Least concern	Not listed	
Threskiornithidae	*Threskiornis molucca*	Australian white ibis	Least concern	Not listed	
Timaliidae	*Zosterops lateralis*	Silvereye	Least concern	Not listed	
Reptiles					
Scincidae	*Cryptoblepherus virgatus*	Striped snake-eyed skink	Least concern	Not listed

Executive Summary

The historic heritage report assesses the nature and significance of the historic heritage resource for the Auto Mall Project (the Project) at the Brisbane Airport. Recommendations for management of known and potential sites are provided. This report includes:

- A review of historic heritage databases and registers, existing studies, publications and reports with relevance to the project area.
- The nature of cultural heritage significance of the whole proposed development area and the sites noted during the abovementioned assessment.
- Specific management and mitigation recommendations for the identified historic heritage in the project area.
- Specific management recommendations for additional historic heritage sites and places which potentially exist within the project area and which have not, to date, been assessed and/or identified as requiring assessment.

Identified Historic Heritage Places

Searches of the relevant databases and registers revealed that the project area does not contain any registered historic heritage sites. No sites were identified by the assessment within the project area. Refer to Section 2.2 Heritage Searches for details of sites located near the project area.

The only site, though not heritage listed that will require historic heritage management throughout the project is the Kingsford Smith Memorial.

Significance Assessment for the Project Area

The historic heritage significance of the entire project area was evaluated using recognised benchmarks such as the *Burra Charter* and *Queensland Heritage Act 1992*. Results are provided in Section 3.

Impact Assessment and Mitigation Measures

The impact assessment for historic heritage in the project area concluded that no significant historic heritage sites will be impacted by the project. There is, however, a low potential for further historic sites/items to exist within the project area.

The historic heritage management recommendations will be implemented and incorporated into the project's Environmental Management Plan (EMP) to mitigate project impacts on unidentified historic heritage material/sites found during the development of the project.

UNESCO	United Nations Educational, Scientific and Cultural Organisation
WHL	World Heritage List

1 Introduction

1.1 Project Overview

The Project involves the development of a multi-purpose automotive precinct accommodating a range of facilities situated around a centrally located 2.5 km test track within the 51 ha International Precinct site which is currently vacant land. The project includes the design and construction of bulk earthworks, roads and services and the test track. The physical works of the Project includes land clearing, bulk earthworks, ground improvement and site preparation in readiness for infrastructure works including roads and services and test track (BAC 2017: 3).

The site is a 51-ha parcel of undeveloped low lying bushland enclosed by Moreton Drive, Airport Drive and Nancy Bird Way and located near the Brisbane International Terminal (Airport Central Precinct). The proposed land parcel nominated excludes the Kingsford Smith Memorial and surrounding area reserved for a future realignment of Airport Drive. The Project will involve upgrading of drainage through the Banksia Place precinct and modification to several existing drainage structures under the surrounding roadways, including Moreton Drive, Airport Drive and Nancy Bird Way (BAC 2017: 4).

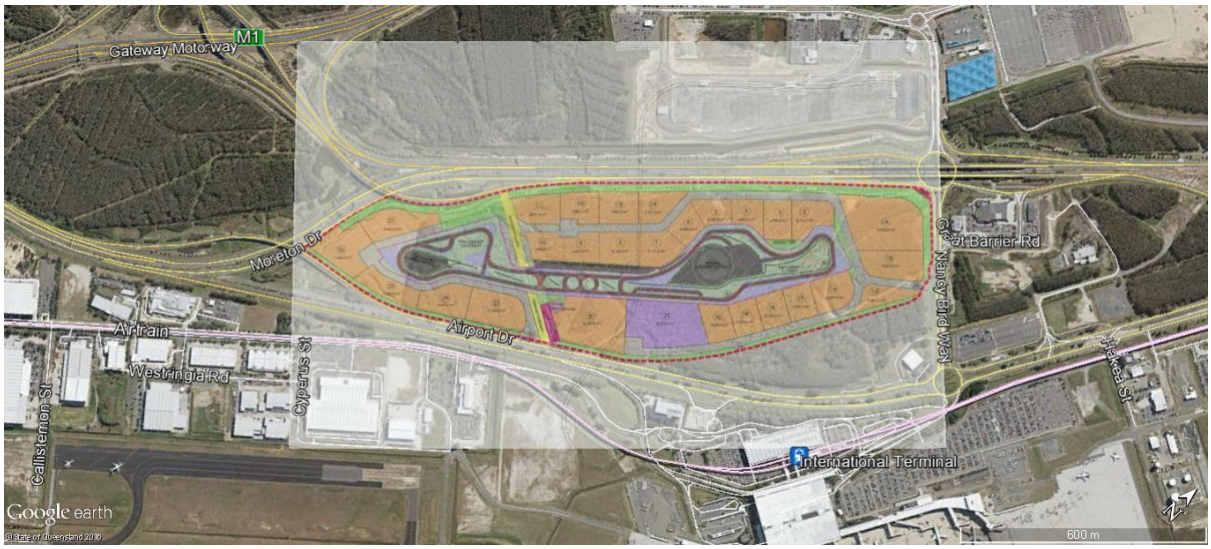

Figure 1: Location of project (Google Earth Pro 2017).

1.2 Methodology

The following methodology was employed to follow best practice and legislative framework for historic heritage management in Queensland.

1.2.1 Desktop Assessment

A desktop assessment was undertaken to determine the existence, extent and probable levels of significance of any places likely to be located within the project area. This assessment comprised searches of statutory and non-statutory registers and databases, and a review of existing published and unpublished reports, surveys and assessments of the project area and its immediate surroundings (refer to Section 2, Existing Conditions). The results of this desktop assessment informed the assessment provided in this report.

1.2.2 Significance Criteria

Determining the significance of a heritage place, item or site requires research to enable an understanding of its value or level of importance. Assessments of heritage significance for this assessment were based on an understanding of the place's history together with the physical analysis (field survey) and an appreciation of the comparative level of rarity or representativeness that the site possesses. In Queensland, heritage practitioners rely on two key documents to undertake significance assessments: *The Burra Charter of Australia International Council on Monuments and Sites* (Australia ICOMOS) and the *Queensland Heritage Act 1992.*

The *Queensland Heritage Act 1992* (QH Act) outlines the following criteria for assessing cultural significance of heritage places. Under Section 35 (1) of the QH Act, a place may be entered into the register if it satisfies one or more of the following criteria:

A. If the place is important in demonstrating the evolution or pattern of Queensland's history;
B. If the place demonstrates rare, uncommon or endangered aspects of Queensland's cultural heritage;
C. If the place has potential to yield information that will contribute to an understanding of Queensland's history;
D. If the place is important in demonstrating the principal characteristics of a particular class of cultural places;
E. If the place is important because of its aesthetic significance;
F. If the place is important in demonstrating a high degree of creative or technical achievement at a particular period;
G. If the place has a strong or special association with a particular community or cultural group for social, cultural or spiritual reasons;
H. If the place has a special association with the life or work of a particular person, group or organisation of importance in Queensland's history.

The criteria used for assessing places of local heritage significance under the *Brisbane City Plan 2014* mirrors the criteria developed under the QH Act, except that a site's significance relates to the shire or locality rather than the state. Once a site has been assessed using the above-listed QHA criteria, the following thresholds are applied to determine the level (i.e. local, state or national) at which the place or element is considered significant:

Table 1: Hierarchy of Significance.

Definition	Threshold
Element of exceptional significance or heritage value - embodies national or state heritage significance and makes an irreplaceable contribution to the significance/heritage value of the place.	Likely to fulfil national heritage entry criteria.
Element of high significance or heritage value - embodies state heritage significance and makes an irreplaceable contribution to the significance/heritage value of the place.	Likely to fulfil state heritage entry criteria.
Element of moderate significance or heritage value - embodies state or local heritage values and makes an irreplaceable contribution to the values of the place.	Likely to fulfil state and/or local heritage entry criteria
Element of some significance or heritage value - embodies local heritage values and makes a significant contribution to the significance/heritage value of the place.	Likely to fulfil local heritage entry criteria

Definition	Threshold
Element has low heritage value but may contribute to other elements of heritage value.	Unlikely to fulfil local heritage entry criteria.
Intrusive element which detracts, or has the potential to detract, from the significance of the place.	Does not have heritage value.

Section 3, Significance Assessment, presents the results of the significance assessment of the project area. The results from the significance assessment informed the impact assessment (refer to Section 4, Impact Assessment), recommendations and management strategies for management of identified and potential historic heritage in the project area (refer to Section 5, Management Measures).

1.3 Legislative Framework

Knowledge of cultural heritage legislation is essential when assessing sites, places or items of cultural heritage significance. The project area is affected by several statutory controls which must be considered prior to site development. Searches of relevant statutory registers associated with national, state and local legislation were undertaken as part of this study. Places included on these registers possess an established level of significance. It is important to note, however, that the absence of a place on these registers does not mean it has no heritage significance. Not all places of heritage significance in Australia have been identified and/or listed yet, particularly places of archaeological significance. Moreover, values can change and evolve, and places may take on new or different heritage significance according to these values, or the passage of time.

1.3.1 Statutory Legislation

National Legislation

The EPBC Act is the key national heritage legislation and is administered by the Commonwealth Department of Environment (DoE). The EPBC Act provides a number of statutory controls for heritage places. Places of national heritage value and those owned or managed by the Commonwealth are located on the National Heritage List (NHL) and Commonwealth Heritage List (CHL) respectively. In addition, the following national legislation is relevant to heritage:

- *The Protection of Moveable Cultural Heritage Act, 1986* regulates the export of Australia's significant cultural heritage objects. The Act does not restrict normal and legitimate trade in cultural property and does not affect an individual's right to own or sell within Australia; and

- *The Australian Heritage Council Act, 2003* provides for the establishment of the Australian Heritage Council, which is the principal advisory group to the Australian Government on heritage matters. This Act also provided for registration of places considered of national significance on the (former) Register of the National Estate (RNE) or the Australian Heritage Places Inventory (AHPI).

The Australian Heritage Council manages the (former) RNE. This register was frozen in 2007, meaning no new items could be added to it. It remained a statutory register until February 2012 – it is now a non-statutory archive of heritage places. Sites and places entered on the NHL, the CHL and the (former) RNE are located on the AHPI.

State Legislation

Places of state heritage significance in Queensland are managed under the *Queensland Heritage Act 1992* (QH Act). The Act provides for the establishment of the Queensland Heritage Council (QHC) and the Queensland Heritage Register (QHR), which lists places of cultural heritage significance to Queensland, and regulates development of registered places. Under the provisions of the QH Act, any development of a place listed on the QHR must be carried out in accordance with the QH Act. A place may also be entered in the register if it satisfies one or more of the assessment criteria under Section 35 (1) of the QH Act (see Section 1.2.2, Significance Criteria). The QH Act also applies to potential archaeological places.

Local Legislation

Local heritage places are managed under local planning schemes and the *Sustainable Planning Act 2009*. The project area falls within the boundaries of Brisbane City Council. Local heritage places are managed under the *Brisbane City Plan 2014*.

1.3.2 Non-statutory Framework

There are other sources for heritage places or historic sites that are not listed on statutory registers. Places identified during these searches contribute to a better understanding of the project area and often identify places that require further investigation under the QH Act.

Queensland National Trust Register

The Queensland National Trust (QNT) is a membership-based community organisation that promotes natural, Indigenous and cultural heritage places and items of Queensland. The focus of the Trust's activities is heritage and environmental education. Through its properties, advocacy and research, the Trust encourages the community to understand and care for our significant places, wildlife, and stories. The Trust maintains the Queensland National Trust Register (QNTR) which was consulted for this report. The QNTR contains individual buildings, precincts, natural environment places and culturally significant artefacts. While these listings do not attract any legal protection for a place, nor do they put the owner of a listed place under any legal obligation, they do have moral and advocacy value (QNT 2004).

Monument Australia

The Monument Australia website is a historical and educational research site which records the public monuments and memorials in all Australian States and Territories under various themes. These public monuments and memorials were erected by a public desire to commemorate people or events.

1.3.3 Guidelines and Charters for Heritage Practice

The Burra Charter

The *Burra Charter* of Australia ICOMOS is the leading guideline for heritage practitioners and provides guidance for the conservation and management of significant places. It defines cultural significance as "aesthetic, historic, scientific or social value for past, present and future generations" and goes onto state "cultural significance is embodied in the *place* itself, its *fabric*, *setting*, *use*, *associations*, *meanings*, records, *related places* and *related objects*" (Australia ICOMOS 2013). It outlines a specific methodology/ process for assessing sites.

Queensland Heritage Council Guidelines

The Queensland Heritage Council provides guidelines to assist in assessing which level of cultural heritage significance is applicable to a site.

These guidelines provide the following definitions:

> *A place is of local cultural heritage significance if its heritage values are of a purely localised nature and do not contribute significantly to our understanding of the wider pattern and evolution of Queensland's history and heritage…*
>
> *A place is of state cultural heritage significance if its heritage values contribute to our understanding of the wider pattern and evolution of Queensland's history and heritage. This includes places that contribute significantly to our understanding of the regional pattern and development of Queensland (2006: 5).*

2 Existing Conditions

This section details the existing conditions of the project area, including a brief description of the project area, contextual historical background and results from the desktop assessment. This assists the understanding of the project area's historical phases. The results from this assessment inform the discussion in Section 3, Significance Assessment.

2.1 The Project Area

The project area is predominantly vegetated with casuarinas and areas of mangrove wetlands. The Kingsford Smith Memorial is not within the area proposed for development, but has been included in this assessment due to its proximity (within 100m of the project area).

Figure 2: Mangrove wetlands (Aurecon 2017).

Figure 3: Mangrove creek (Aurecon 2017).

Figure 4: Modified wetland on roadside (Aurecon 2017).

Figure 5: Kingsford Smith Memorial (Aurecon 2017).

The project area is located within the Brisbane Airport site. Since European settlement the site of Brisbane Airport was used largely for agricultural purposes and residential land until it was resumed by the Government in the early 1970s for use as an airport. Today, in addition to the airport itself, there are 420 businesses located at Brisbane Airport including freight and aircraft handling, warehouses, transport and communications, research, property and infrastructure development, education and training, recreation, tourism leisure and retail businesses (BAC 2015).

2.2 Heritage Searches

Searches of the various heritage register and databases for historic heritage near the project area were undertaken. Results are provided below.

Table 2: Register searches.

Places Identified	Heritage Registers	Comments
Eagle Farm Women's Prison and Factory Site	Queensland Heritage Register (ID 600186); Register of the National Estate (ID 16490); Commonwealth Heritage List (ID 105478); National Trust of Queensland Register (ID BNE 1/134).	Located 2km from project area.
Allison Testing Stands (former)	Queensland Heritage Register (ID 602329)	Located 2km from project area.
Second World War Hangar No. 7	Queensland Heritage Register (ID 601007); Register of the National Estate (ID 18174); Commonwealth Heritage List (ID 105407); National Trust of Queensland Register (ID BNE 1/805).	Located 2.5km from project area.
Brisbane Domestic Air Terminal (former)	National Trust of Queensland Register (ID BNE 1/916).	Demolished? Non-statutory register.
Australian Airlines Baggage Collection (former)	National Trust of Queensland Register (ID BNE 1/917).	Demolished? Non-statutory register.
Aircraft Hangar 2 (former)	National Trust of Queensland Register (ID BNE 1/918).	Demolished? Non-statutory register.
Aircraft Hangar 1 (former)	National Trust of Queensland Register (ID BNE 1/919).	Demolished? Non-statutory register.
Sir Charles Kingsford Smith Memorial	Monument Australia	Located just outside the boundary of the project area. Non-statutory register.
460 Squadron Memorial	Monument Australia	Located just outside the boundary of the project area. Non-statutory register.

2.3 Previous Reports

The following reports are relevant to historic heritage assessment of the study area.

Table 3: Previous Reports.

Report	Description
ARCHAEO 2007, New Parallel Runway Project, Brisbane Airport Corporation.	This study was undertaken for the New Parallel Runway Project and included an assessment of the site's Aboriginal and historic heritage significance including a detailed historical account. A range of sites were identified by the study including Aboriginal stone artefacts and historical remnants at Cribb Island.
Converge, 2014, Airport Environment Strategy 2014 – Cultural Heritage Chapter, Brisbane Airport Corporation.	Desktop study undertaken to assist BAC to implement strategies to identify, protect and conserve known and potential cultural heritage sites and places. The study included Aboriginal and historic cultural heritage places known to exist within the airport boundaries, including (Aboriginal sites) a burial, camp sites and possible Bora Ring; and (historic sites) jetty and plaques at Cribb Island, former school site and the Kingsford Smith Memorial.

Report	Description
Converge, 2015, Brisbane Airport Heritage Management Plan, Brisbane Airport Corporation.	The Heritage Management Plan (HMP) considers the Aboriginal cultural heritage (ACH) and historic heritage of Brisbane Airport excluding the New Parallel Runway project site. The HMP provides direction for future development to occur at Brisbane Airport whilst best conserving the site's heritage values. The HMP includes detailed information about the Aboriginal and historic heritage values of the airport site including an historical and biogeographical overview. Recommendations and management strategies are provided for the management of the site's significant cultural heritage values. The historical background from the HMP has been utilised for this assessment.
Leighton Contractors, 2008, Kingsford Smith Memorial – Brisbane. Artefact Condition Report.	The condition report was undertaken to ascertain the condition of the Southern Cross Airplane and associated artefacts prior to the NARP construction phases occurring. The results of the study determined that the plan and artefacts were in sound condition with no significant damage. It stated that increased dust deposition was highly likely, but could be monitored and managed and was considered unlikely to risk the site. A low-level risk of the plane toppling was identified so recommendations for monitoring were provided to manage this risk. The report provided a significance of the assessment and determined that much of the external fabric of the plane was not original and some was unsympathetic to the original design. It rated original fabric as nationally significant.
Leighton Contractors, 2009, Kingsford Smith Memorial – Brisbane. Post NARP Artefact Condition Report.	A second condition report was prepared following completion of NARP and found that the plane and associated artefacts had not deteriorated due to the project activities. The report provided comment that all mitigation measures and recommendations from the initial condition report were implemented during the project, including ongoing monitoring.

2.4 Historical Background

The following historical background is summarised from Section 2.4 of the HMP. Aboriginal history of the project area is not included in this assessment. Refer to Section 2.4.1 of the HMP for further details.

Convict era

- The Eagle Farm Agricultural Reserve was established near the current study area in in 1829. The farm was created to supply the fledgling Moreton Bay penal colony, which was established in 1824.
- The Eagle Farm Agricultural Reserve soon became the location of the main penal establishment for female convicts, who are recorded as being there since 1830. (This was located approximately 2.3km from the current project area).
- The farm, which was referred to as a 'female factory' contained a stockyard, separate compound for the female convicts, and a superintendent's compound. The female convicts were housed in a four-roomed building. The complex also included a two-roomed building for male convicts, a storeroom, matron's quarters, hospital and workhouse and a block of six cells (QHR ID 600186).

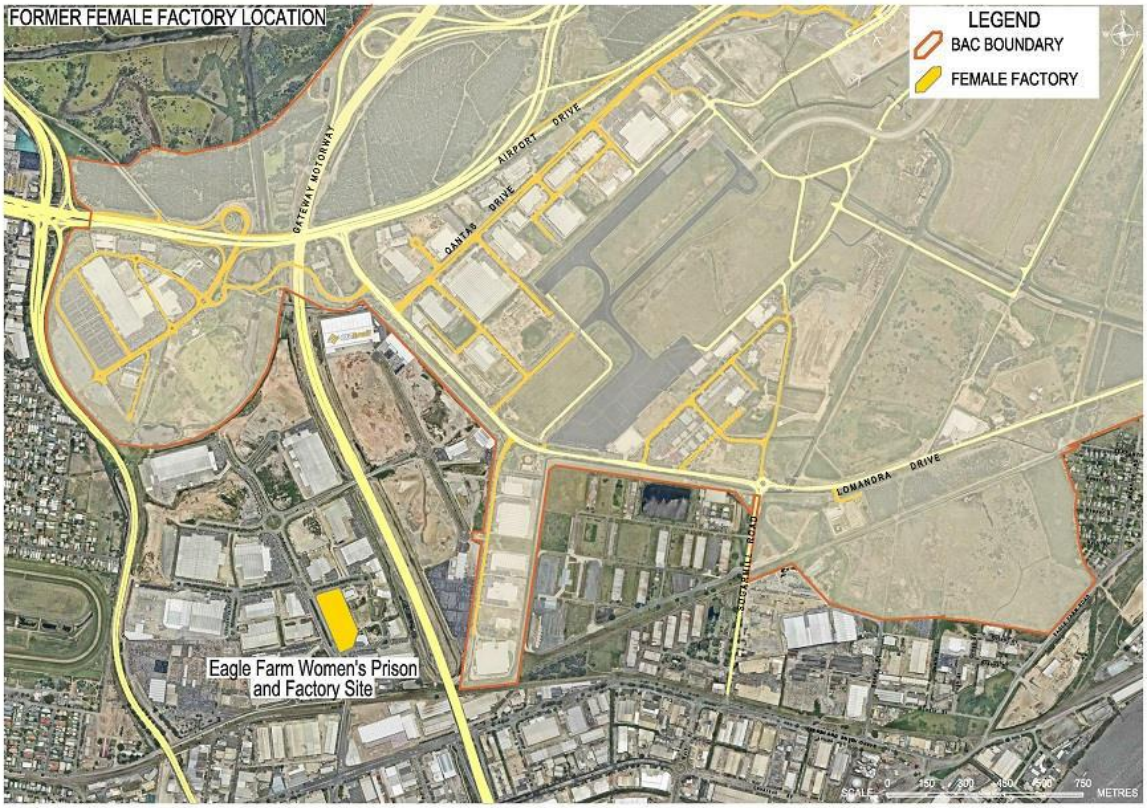

Figure 6: The location of the former women's prison in relation to the airport boundary (Converge 2016: 16).

Free Settlement

- Following free settlement in 1842, Eagle Farm was among the first places to be subdivided into lots for agriculture.
- The construction of the Brisbane to Sandgate railway line (opened May 1882) encouraged an influx of people to the north and along the railway route and the extension of the railway line to Pinkenba (1897) further stimulated industrial and agricultural growth in the area around Eagle Farm.

Early Aviation

- Some reports state that civil aviation activities had occurred at Eagle Farm racecourse in the current suburb of Ascot as early as 1912.
- On 29 June 1922, notification to acquire land at Eagle Farm for development of an aerodrome was given in the Commonwealth of Australia Gazette. The aerodrome began with several companies formed by military-trained pilots establishing themselves at Eagle Farm.
- The Eagle Farm Aerodrome witnessed the arrival of Charles Kingsford Smith and co-pilot Charles Ulm in the Southern Cross in June 1928.
- In September 1928, Kingsford Smith and Ulm made another record-breaking flight when they became the first to fly non-stop across the Tasman from Australia to New Zealand and back in the Southern Cross aircraft.
- Shortly before his death in 1935, Sir Charles Kingsford Smith donated the Southern Cross aircraft to the Commonwealth of Australia.
- A memorial was built to house the plane at Eagle Farm 30 years after his epic flight, in 1958. It was a glass and aluminium structure designed by architects Guy Crick Lewis & Williams and it was located opposite the old international terminal.
- The current memorial was built in the 1980s, and is located on Correa Street near the Airport Drive and Nancy Bird Way intersection.

Figure 7: Landing the 'Southern Cross' in 1928 (JOL ID# 139254).

Figure 8: Charles Kingsford Smith at Eagle Farm (NAA ID# 11353043).

World War Two

- Eagle Farm was then used by the Royal Australian Air Force (RAAF) for training purposes until early 1942. With the advent of World War Two in the Pacific, the suburb of Eagle Farm became a hub of military activity.
- Several terminal buildings and facilities were built during this period.
- Remnant sites from World War Two still present in near the project area include Hangar No. 7 and the former Allison Testing Stands. Hangar No. 7 and the former Allison Testing Stands are now state heritage listed for their historic value. These sites are between 2 and 2.5km southwest of the current project area.

Figure 9: Eagle Farm during World War Two (JOL ID# 165563).

Figure 10: Military Camp at Eagle Farm Racecourse, 1944 (BCC Library ID# BCC-B120-80913A).

Post-World War Two Developments

- From the 1950s-1980s Brisbane Airport retained the igloos that were vestiges of its World War Two operations. Two terminal buildings housed the domestic carriers Ansett and Trans Australia Airlines, while a third catered for all international services. All three of these terminal buildings were wartime igloos erected to house military aircraft assembly and testing plants.
- The increasing number of both domestic and international passengers departing from Brisbane necessitated several investigations into the construction of a new airport in Brisbane from the early 1970s.
- A new site was chosen by state and local governments, 5 kilometres north of the former site, which necessitated the resumption of 60 houses in Lander's Pocket and Lower Nudgee, some land from the Nudgee Golf Course and virtually all the residential settlement at Cribb Island.

- A new International Terminal Building was approved for construction in April 1974, replacing a World War Two igloo.

Recent History of Brisbane Airport

- In 1988, Prime Minister Bob Hawke opened the runway and control tower for the new Domestic Terminal, in time for Expo '88. The new International Terminal was opened in 1995, and it was built with a modular design to allow for expansion.

2.5 Results of Desktop Assessment

Field wok was not undertaken by Converge during the current assessment, however, Converge have previously undertaken fieldwork at the airport site for the preparation of the HMP. Aurecon provided results/photographs of their fieldwork for Converge to review for the current assessment. Aurecon consultants did not identify any historic features or items of potential interest in the project area.

The desktop assessment found that there are no heritage listed items or sites within the project area, however, there are two historic heritage sites within the immediate vicinity - the Kingsford Smith Memorial and the 460 Squadron Memorial – which are both listed in a non-statutory register (Monument Australia).

Previous studies and the historical background of the project area identified the types of activities that historically occurred in the project area, including convict settlement, farming/agriculture, early aviation (including WWII) activities and the development of the airport. Although no historic sites have been identified in the project area, the desktop assessment has informed the following consideration of potential for historical sites/items to be identified within the project area during construction activities.

2.6 Further Potential within the Project Area

The potential for historic features to be extant within the project area is considered below. If any features of potential interest are located during construction works, the 'Procedure for Incidental Finds' should be enacted (Appendix A).

Convict era – highly unlikely to find convict era remnants in the current project area as the female prison/factory was located approximately 2.3 km to the south west.

Agricultural/farming – it is possible to find remnant agricultural/farming features in the project area such as former fences, footings of previous buildings, drains and culverts from former roads/tracks.

Early aviation – aside from the Kingsford Smith Memorial, which houses the Southern Cross plane, it is unlikely that other evidence of historic aviation will be identified in the current project area during construction as the former airport was in a different location to the southwest.

World War Two – aside from the Squadron 460 Memorial, which is located next to the Kingsford Smith memorial, it is unlikely that other evidence of WWII aviation (RAAF) will be identified in the current project area during construction as the former airport was in a different location to the southwest.

3 Significance Assessment

The methodology adopted to assess significance of the historic heritage of the project area and individual sites within the project area is set out in Section 1.2. This section assesses the historic heritage values and significance of the project area at many levels to establish a baseline for the project to manage those values. The first step in the assessment process is to assess the heritage values of the site and then individual sites are assessed.

3.1 Significance Assessment

This section sets out an assessment of the heritage significance of the project area and individual sites (where relevant) in accordance with the standard criteria identified in the *Queensland Heritage Act 1992* and Queensland Heritage Council Guidelines (refer to Section 1.4).

Table 4: Significance of the Project area.

Criteria	Grading	Statement
A. History.	Low (project area)	The project area has had various historical developments since the 1820s, when it was a penal settlement. Although sites of state significance, especially relating to its convict and wartime developments, are located nearby (within 2km), there are no historical sites within the footprint of the project that have been identified.
	Exceptional (KSM)	The Kingsford Smith Memorial (which houses the Southern Cross Plane) has historical significance and, although it is not listed on any statutory heritage registers, it is likely to threshold at state or national level for its historical significance.
B. Rarity.	Low (project area)	The project area does not demonstrate any known rare features of significance at local or state levels.
	Exceptional (KSM)	The Southern Cross Plane (at the KSM), is a rare example of a plane flown by Sir Charles Kingsford Smith, internationally renowned aviator. The Eagle Farm Aerodrome witnessed the arrival of Charles Kingsford Smith and co-pilot Charles Ulm in the Southern Cross in June 1928. Over 15,000 people waited at Eagle Farm to see Kingsford Smith complete this epic journey, as the first trans-pacific flight from the United States to Australia. Another plane flown by Kingsford Smith (Southern Cross Minor) is on display at the Queensland Museum.
C. Scientific/ archaeological.	Low (project area)	The project area has low potential to reveal any archaeological remnants or previously unknown historical features that would contribute to an understanding of the local area or state.
D. Representative.	Low (project area)	The project area does not demonstrate principal characteristics of a particular type of place that would be significant at the local or state levels.
E. Aesthetics.	Low (project area)	The project area does not feature aesthetic significance.
	Some (KSM)	The KSM has some aesthetic significance, including views and vistas to and from the memorial.

Criteria	Grading	Statement
F. Creativity/ technical.	Low (project area)	The project area does not feature a high degree of technical achievements or creativity from a particular period.
	Exceptional (KSM)	The Southern Cross Plane (at the KSM) demonstrates exceptional technical achievements for having been flown by Sir Charles Kingsford Smith in June 1928, for the first trans-pacific flight from the United States to Australia.
G. Social.	Low (project area)	The project area does not demonstrate any special social or cultural associations.
H. Associative.	Some (project area)	The project area features a memorial for Squadron 460 which is significant at the local level for its association with RAAF personnel during WWII.
	Exceptional (KSM)	The Southern Cross Plane (at the KSM) is significant for its association with Sir Charles Kingsford Smith, internationally renowned aviator.

3.2 Summary

The project site itself has little to no heritage value. It has potential to reveal items or sites (not currently known) during construction, but this can be managed with the procedure for incidental finds (Appendix A).

The Kingsford Smith Memorial (specially the Southern Cross Plane) is potentially significant at a national or state level for its historic significance, its rarity, aesthetics, technical achievements and associative values. It is not currently listed on any statutory heritage register.

The Squadron 460 Memorial has some local heritage value, but is not listed on any statutory heritage register.

4 Impact Assessment

4.1 Types of Potential Impacts

Potential impact on identified and potential historic heritage by the project will generally be vegetation clearance and removal of the ground surface and sub-surface disturbance related to the development of auto mall infrastructure. This report has considered the impact on identified and potential heritage values of all development activities relating to the development and operation of the auto mall.

4.2 Project Impacts on Identified Historic Heritage

Table 5: Potential impacts on identified heritage.

Place	Potential Impacts
KSM	Vibration and dust associated with the adjacent development is identified as a low risk, but a risk nonetheless which should be managed.
Squadron 460 Memorial	No potential impacts identified.

Previous projects have been undertaken near the KSM, including NARP, which did not result in any damage to the site as all recommendations and mitigations measures were followed (see Section 2.3). The recommendations/mitigation measures provided by the previous assessments have therefore been used to inform the recommendation/mitigation measures for this assessment (see Section 5).

4.3 Project Impact on Potential Historic Heritage

It is concluded that there is low potential for further historic places/items to exist within the project area. If extant within the project area, potential historic heritage sites are likely to relate to early agricultural activities such as blazed (survey) trees, remnant boundary fence lines, as well as historic drains and culverts relating to redevelopment as an airport. Recommendations and mitigation measures to manage project impact on unexpected finds are provided in Section 5.

5 Management Measures

This assessment has identified two NICH sites within the direct vicinity of the project area, of which, only one has potential to be impacted by the project's development – the KSM, although the impacts would be indirect and likely associated with either dust or vibration from the adjacent works.

It should be noted that potential sites of historic heritage significance may be extant within the project area – these could be subsurface (i.e. archaeological sites) or other currently unidentified sites. This section provides site specific recommendations in relation to identified and potential historic heritage sites, as well as general mitigation recommendations to manage potential impacts on unknown/unexpected historic heritage sites extant within the project area.

Assuming the management measures below are suitably implemented, this assessment concludes that the nature and level of impact on historic heritage by the project is manageable.

5.1 Management of the KSM

Undertake dust monitoring during all construction activities near the KSM. As per NARP, the building (KSM) is to be assessed and all door seals and building joints to be repaired/replaced as necessary prior to construction commencing, to ensure the building is weathertight. For reference, the previous measures were undertaken for NARP:

- In consultation with BAC, coordinate Heating Ventilation and Air Conditioning (HVAC) activity.
- HVAC personnel to monitor HVAC system efficiency to ensure minimum 50% contaminant removal (using ASHRAE Dust Spot Efficiency Test, or equivalent) throughout construction period.
- Install high-efficiency HVAC filters and pre-filters.
- Inspect, clean and/or replace HVAC filters as required throughout construction period (Leighton Contractors 2008).

Do not clean dust from historic artefacts or the plane without consultation, advice or supervision of a conservation expert.

5.1.1 Southern Cross Plane

Vibration and dust from the adjacent development may have indirect impacts on the Southern Cross Plane. To manage these potential risks the following should be undertaken.

- Undertake vibration monitoring during all vibration inducing construction works near the KSM. For reference the previous limits established were:
    - No vibrations exceeding 5 mm/s shall be produced at the KSM building base.
    - No vibrating machinery shall be used within proximity to the structure
    - No piles driven within 100m of the structure.
    - No preloading shall be placed near the building to cause settlement from the preloading deflection zone.
    - Limit all machinery operating within proximity of KSM to 15 kph and display advisory signage (Leighton Contractors 2008).

5.1.2 Moveable Heritage

- During NARP, the removable heritage items (such as the KS bust and plinth mounted chronometer) were removed from the KSM during the construction due to the risk of toppling from vibration. The engineer should provide advice as to whether this action is required for the current project based on estimated vibration. If required, the moveable heritage items

should be stored safely on BAC land until the completion of the project and then returned to the KSM.

5.2 Application of Historic Heritage Management Across the Project Area

The historic heritage management recommendations should be implemented and incorporated into the project's Environmental Management Plan (EMP) to mitigate project impacts on both identified historic heritage sites and unidentified historic heritage material/sites found during the development of the project.

This should be applied across the entire project area and should provide information and processes to enable identification and protection of historic heritage sites, both known and unknown. The policies and procedures for management of historic heritage sites or archaeological material uncovered during the project, as outlined in Appendix A (Incidental Finds Procedure), should be implemented.

Additionally, it is recommended that diligence be practiced during works conducted within the project area, particularly during any clearing or construction phases associated with initial preparation of the area. To facilitate this diligence, it is recommended that a historic heritage induction be developed once all approvals for the project are in place but prior to ground disturbing activities, which can be incorporated into the General Site Induction. The historic heritage induction should be prepared by a qualified heritage specialist and include the following:

- Specific instructions for crews regarding their obligations to look for and avoid impacting on historic heritage material until it has been properly assessed;
- Presentation of familiarisation material for work crews so that they are aware of what constitutes a historic heritage find;
- Provision of educational material to personnel informing them what archaeological material may look like, and provide clear instructions on what to do should any such material be found; and,
- A process for the collection, transport and storage of any historic heritage items.

5.3 Archaeologist On-Call

Whilst the potential is low due to the nature of the airport's construction, historic archaeological material may exist across the project area. It is recommended that a historical archaeologist be appointed 'on call' during construction phases of the project, so that a call-out can be made should unexpected archaeological material be located.

5.4 Unexpected Finds

The assessment has found that the project area has potential, albeit low, to contain unidentified historic heritage. Accordingly, the EMP developed for the project should include a procedure for managing unexpected cultural heritage material or sites that may be encountered. This should include:

- All work at the location of the potential historic heritage material/site must cease and reasonable efforts to secure the site should be made – a buffer zone of 20 metres around the find is suitable;
- Work can continue at 20 meters from a find area. Note that the material or site should not be removed or disturbed any further (barriers or temporary fences may be erected as a buffer around the find if required);

- The Site Manager should be notified. They will then notify the Archaeologist appointed 'on call' to the project; and
- The Archaeologist will provide management recommendations to the Site Manager and will liaise with EHP to ensure that the archaeological provisions of the *Queensland Heritage Act 1992* are followed.

A 'Procedure for Incidental Finds' is attached to Appendix A.

Appendix A – Procedure for Incidental Finds

Procedure for discovery of an historical item of potential cultural heritage significance

STOP WORK

If potential item/s of cultural heritage is located during works: stop work, mark and protect the site. Work can continue elsewhere if it will not affect the item.

↓

INITIAL CONTACT

Contact the Site Manager immediately and notify them of the item description and location.

↓

NOTIFICATION TO PROJECT ARCHAEOLOGIST

The Site Manager to contact the Project Archaeologist, including details of the nature of the item.

↓

ASSESS SIGNIFICANCE

The Archaeologist will attend the site as soon as possible to assess significance of item and recommend a course of action. These may include:

i) protect and avoid;
ii) excavate, record and remove;
iii) investigate and preserve, or
iv) no action if the item is deemed to have no significance.

Recommendation i), ii) and iii) will require preparation of a work method statement in consultation with EHP Cultural Heritage Branch prior to any action commencing.

IS ITEM DISCOVERED SIGNIFICANT?

Yes ↓

REPORT FIND TO EHP CULTURAL HERITAGE BRANCH

Reporting of archaeological find to EHP Cultural Heritage Branch is required by law. Depending on the nature of the find, the Project Archaeologist and EHP will negotiate requirements of find.

↓

COMPLETE RECORDING/FIELD WORK

Complete the archaeological or remedial works in accordance with the consent permit or agreed course of action. Advise Site Manager when assessment is complete.

↓

No ↓

RECORDING

Items deemed to have no significance will require recording as evidence. A photograph of the item, including a description of why it is not of significance, should be completed by the Project Archaeologist and forwarded to the Project Manager.

↓

ADVICE

Advise Site Manager when assessment is complete. Confirm advice with EHP Cultural Heritage Branch if required.

↓

WORK RECOMMENCES

Site Manager to advise when works can re-commence in the original or changed form. A Work Method Statement may be devised to ensure suitable management is in place by the project (if required).

↓

SUBMIT FINAL REPORT

Archaeologist completes reporting in accordance with the appropriate guidelines and conditions. A copy of the report to go to relevant Government Authorities and Project Manager.
